SMART REGISTRY PREP

Your Prepry walkthrough

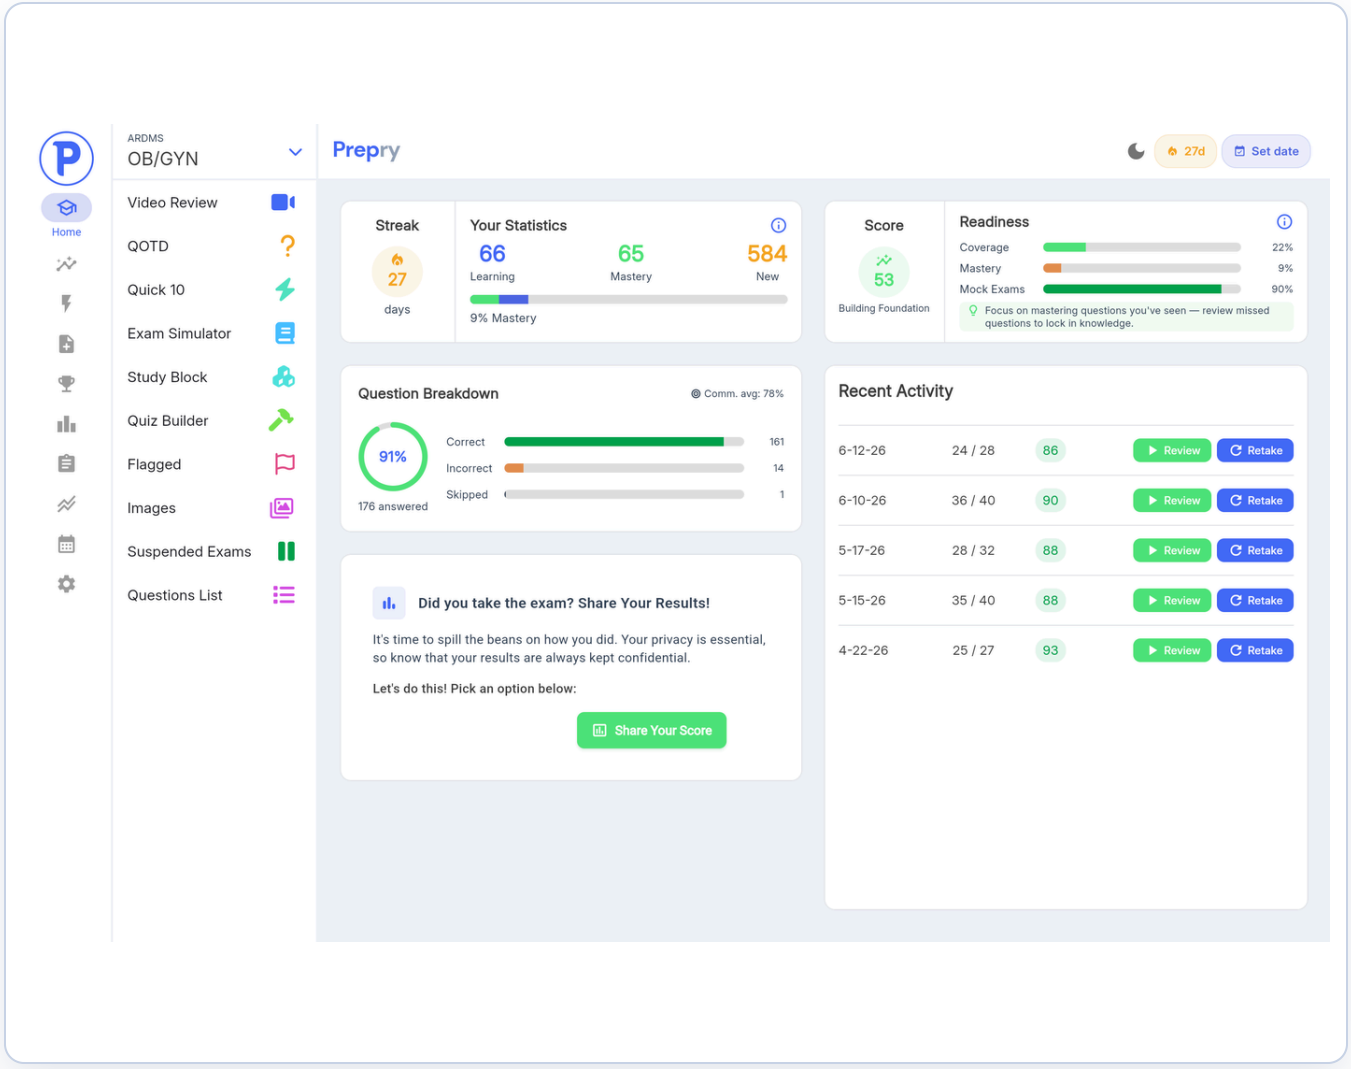

A practical guide to studying with Prepry, from your first login to exam day.

What Prepry does

Prepry brings focused practice, teaching explanations, exam simulation, and progress tracking into one place.

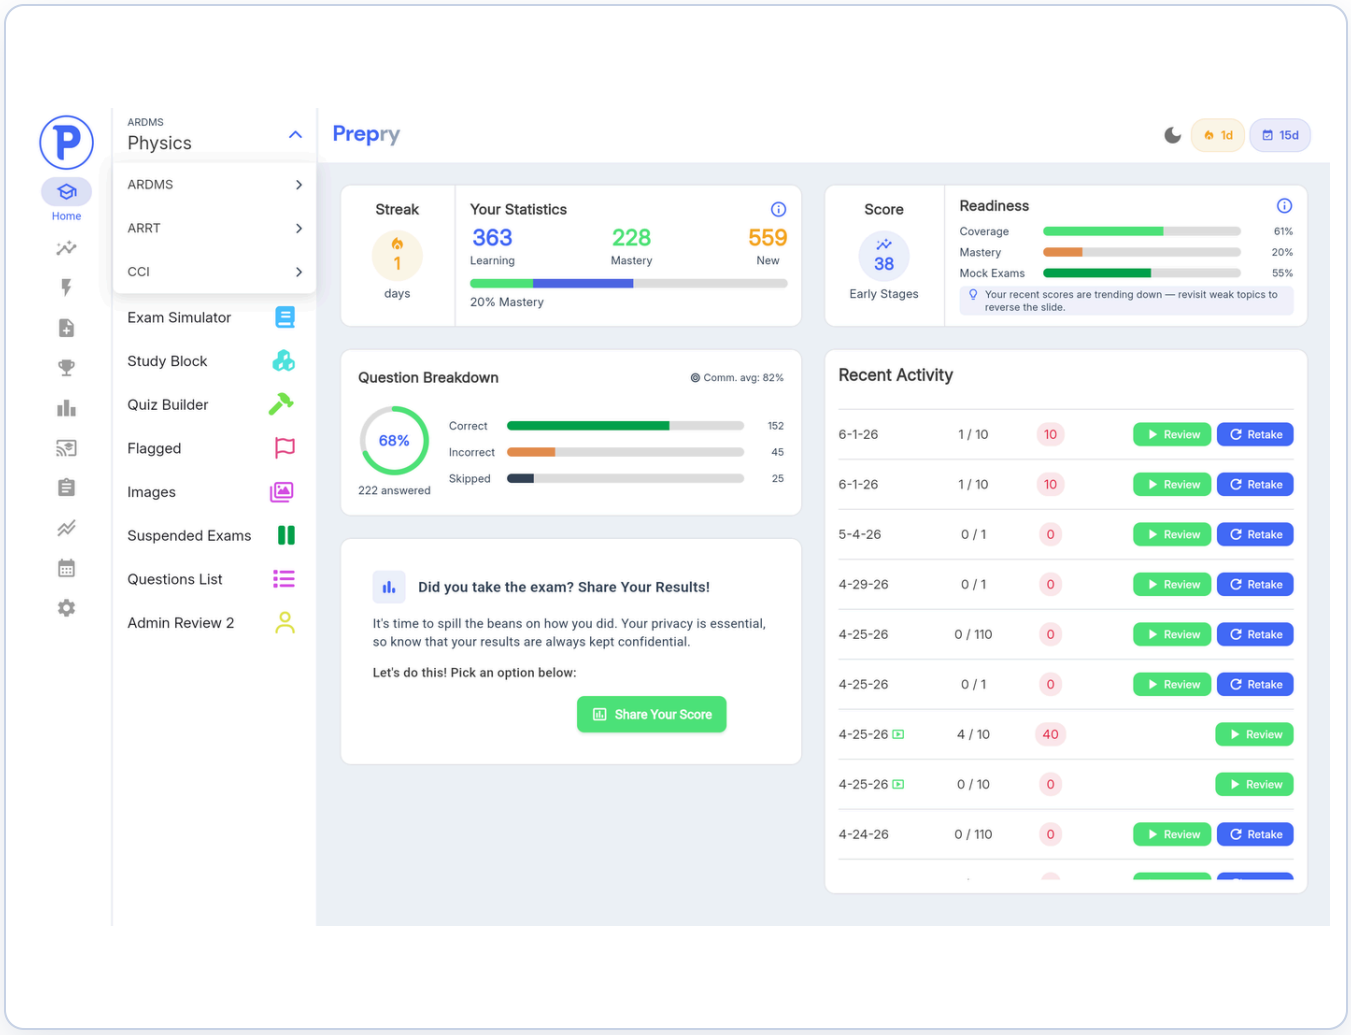

1. Choose the exam and specialty you are preparing for.
2. Practice with immediate teaching feedback or test yourself without help.
3. Use your results to decide what to study next.

Your home dashboard is the starting point for the student journey.

Set up your exam

Sign in, select your credential, and set an exam date. Your date powers the countdown and study plan.

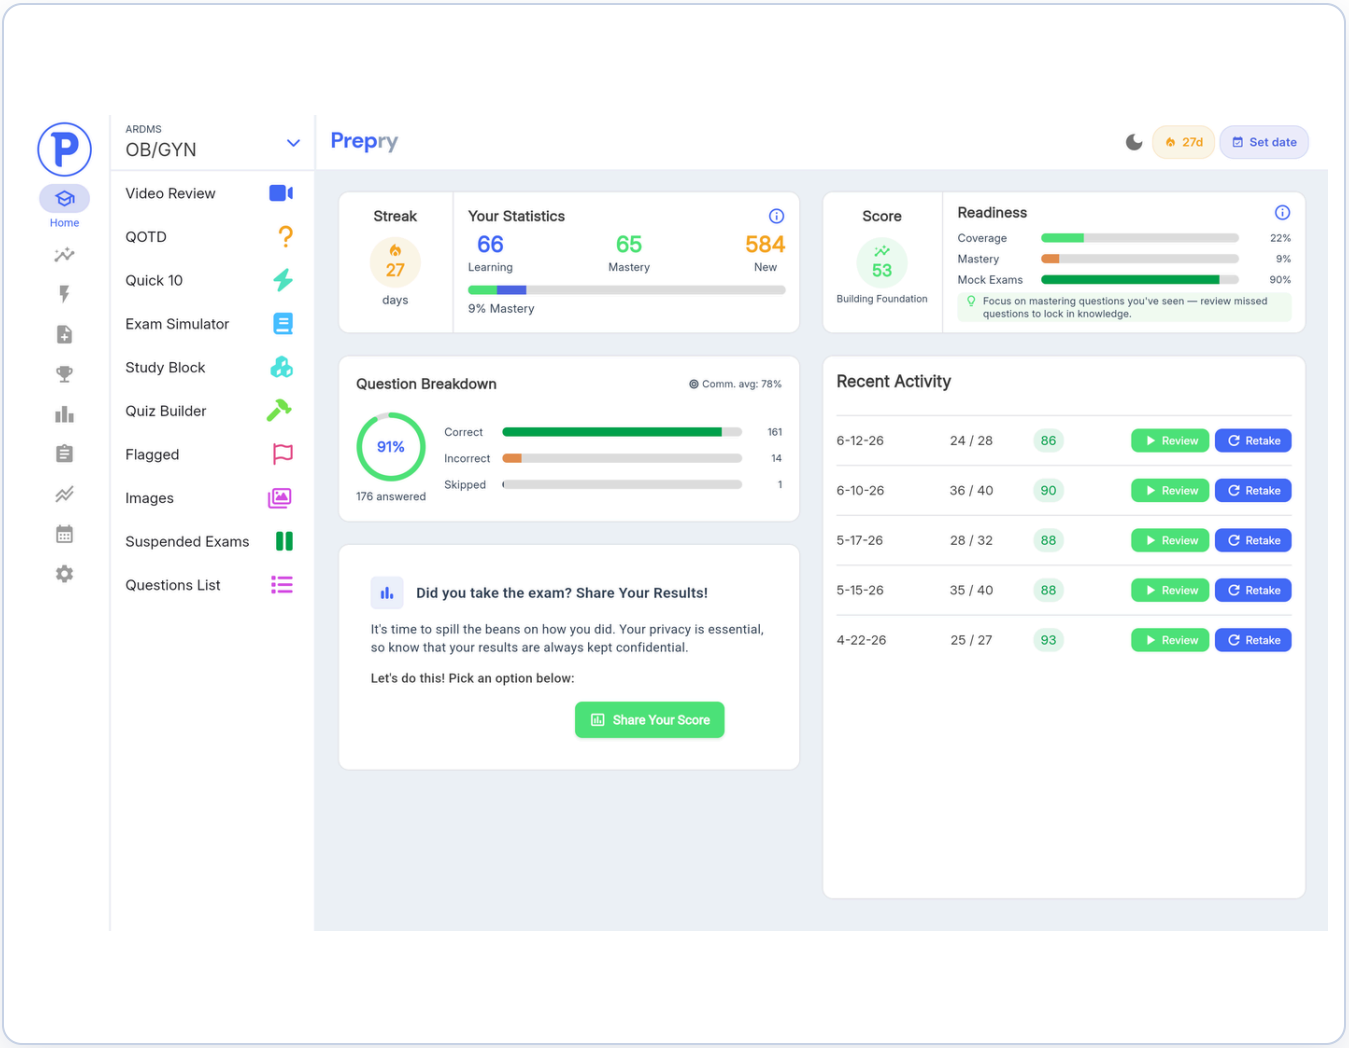

1. Sign in at app.prepry.com with email, Apple, or Google.
2. Choose your credentialing body and exam.
3. Set the date you are working toward.

One subscription can support preparation across covered credentials. Confirm current exam availability in the app.

Make the home screen your command center

The home screen turns a large question bank into a clear next step.

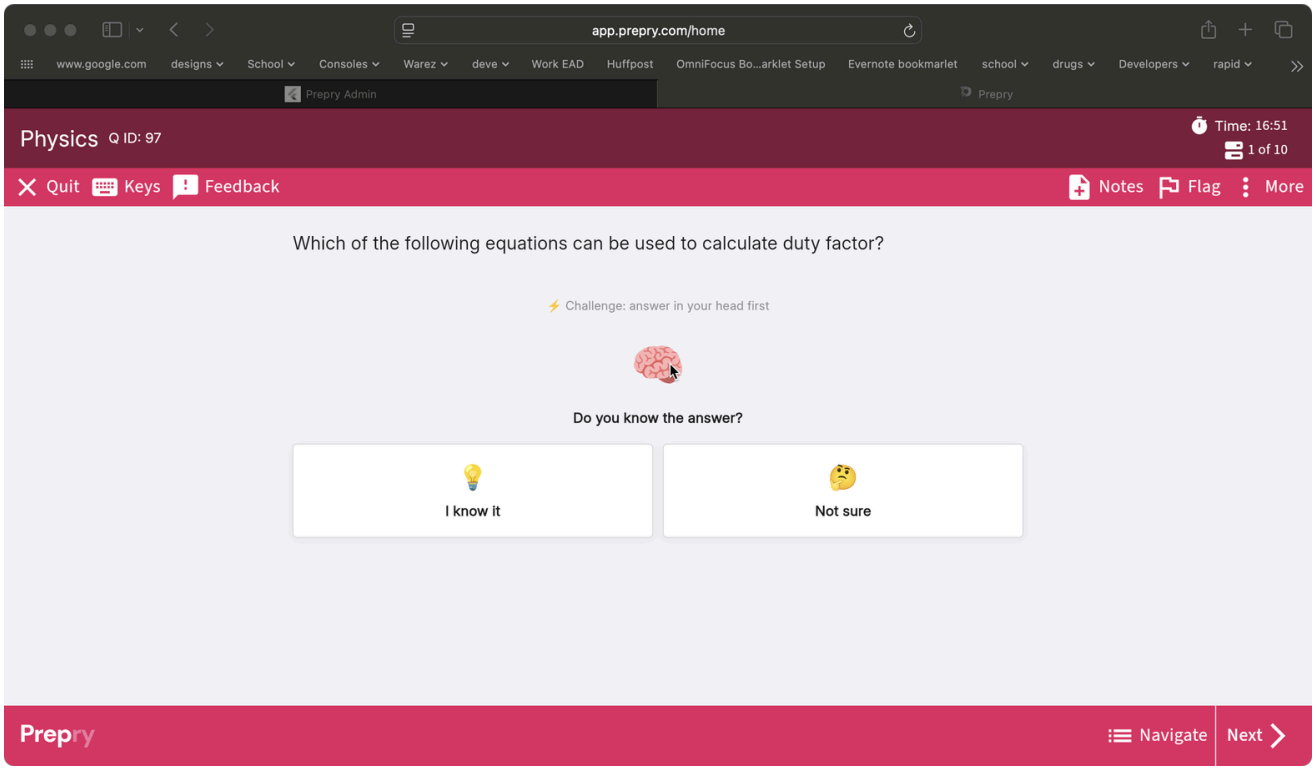

1. Check readiness and recent activity.
2. See your daily goal and streak.
3. Open the next recommended activity instead of guessing what to do.

Use the dashboard to start a session, check progress, and return to your plan.

Tutor Mode: learn as you practice

Tutor Mode gives feedback while you are still thinking about the question.

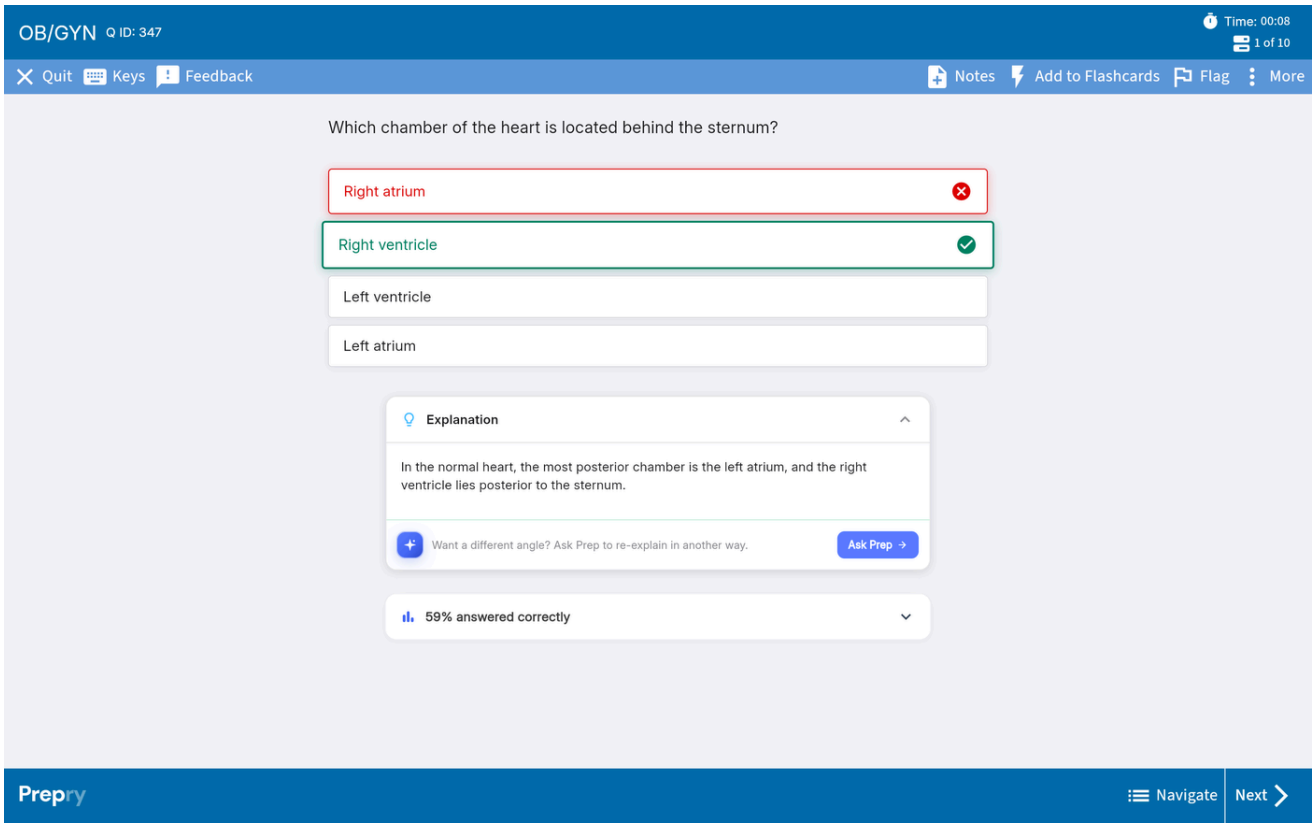

1. Read the question and commit to an answer.
2. See whether your choice was correct immediately.
3. Use the explanation to understand the reasoning, not just the letter.

The goal is retrieval and understanding, not memorizing a repeating quiz.

Turn every question into a lesson

Stay with the concept until it makes sense, then save it for another pass.

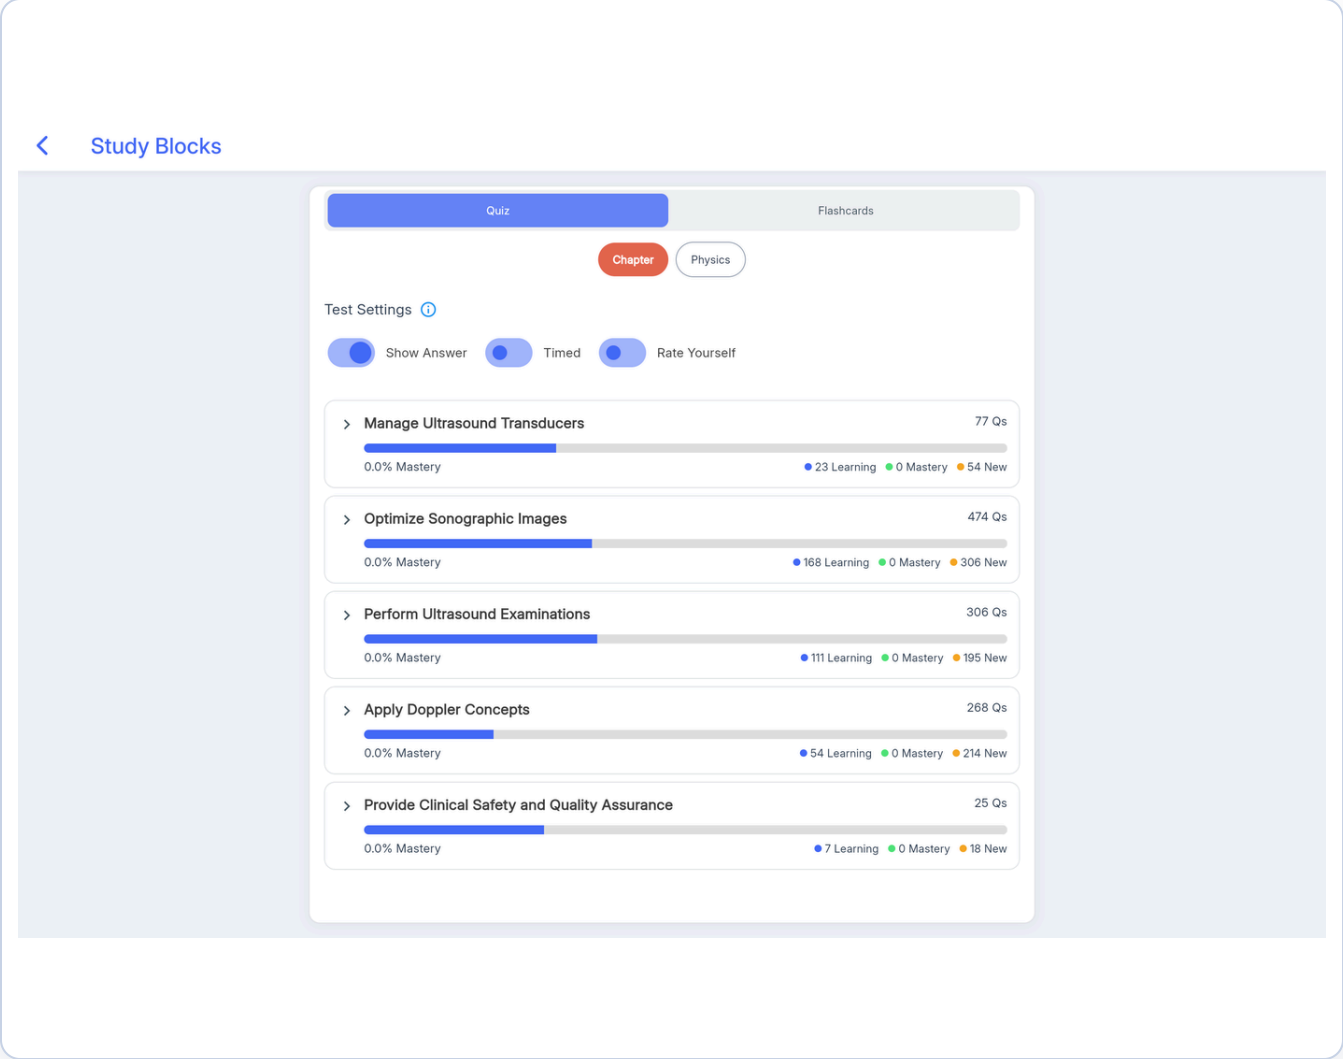

1. Read the full rationale and key terms.
2. Use Ask Prep to request another explanation in a different style.
3. Add a note, flag the question, or save it to flashcards.

Ask Prep is a study aid, not medical advice. Verify high-stakes information with your instructors and course materials.

Study Blocks reduce the overwhelm

Instead of facing the entire bank at once, work through smaller topic-focused sets.

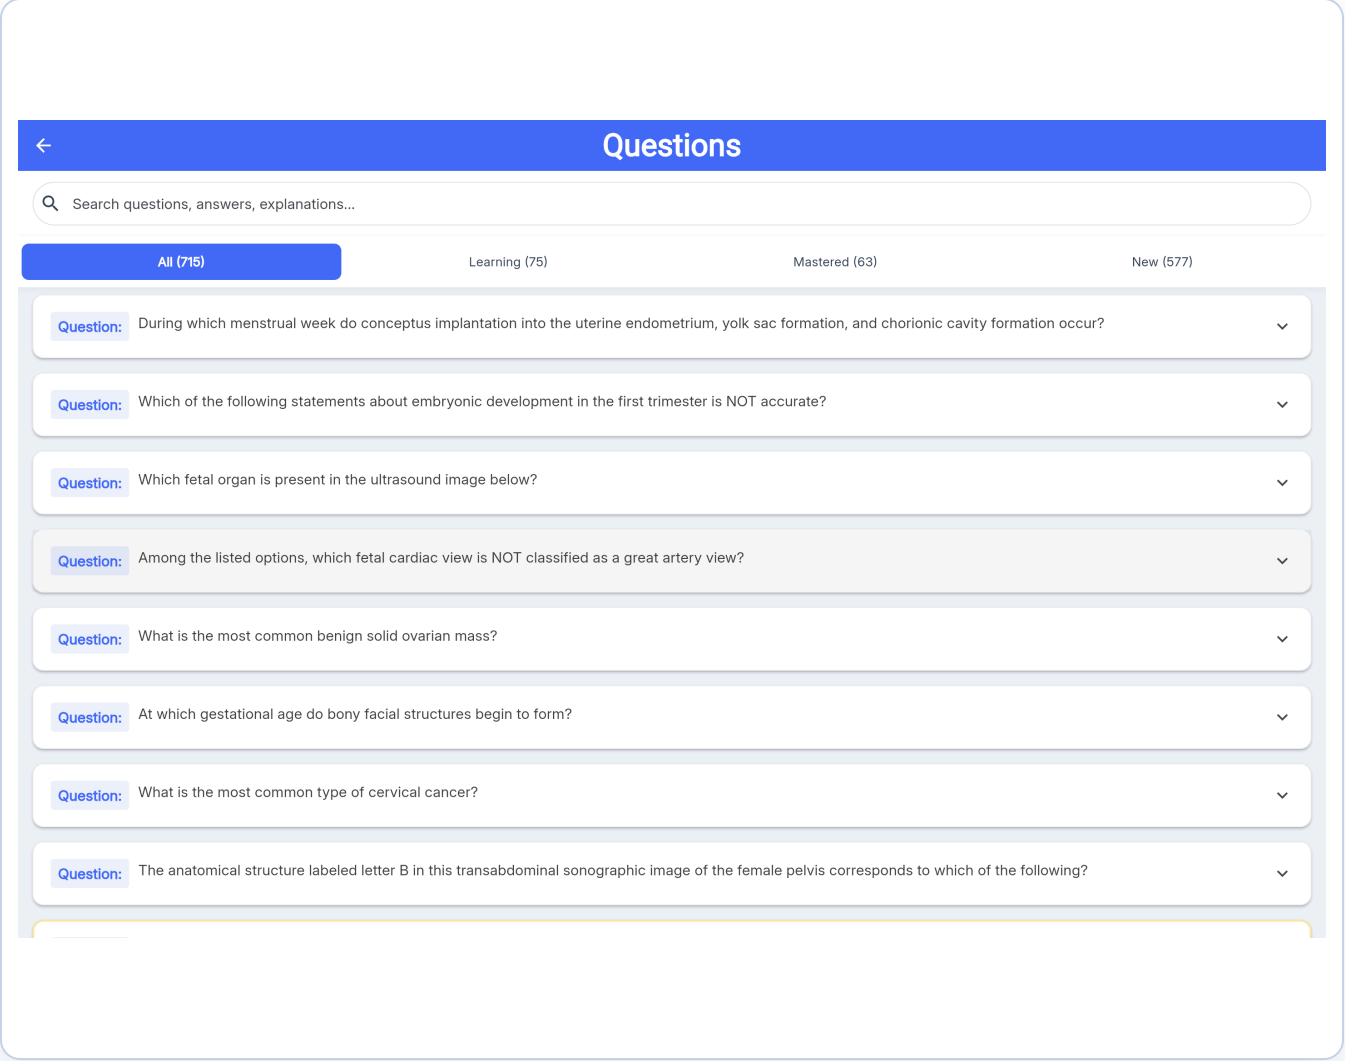

1. Choose a subject or topic.
2. Work through a focused block of questions.
3. Return to the topics that still need work.

Short, focused sessions make it easier to build a consistent routine.

Know what is new, learning, and mastered

Prepry keeps track of your question status so review time goes where it matters.

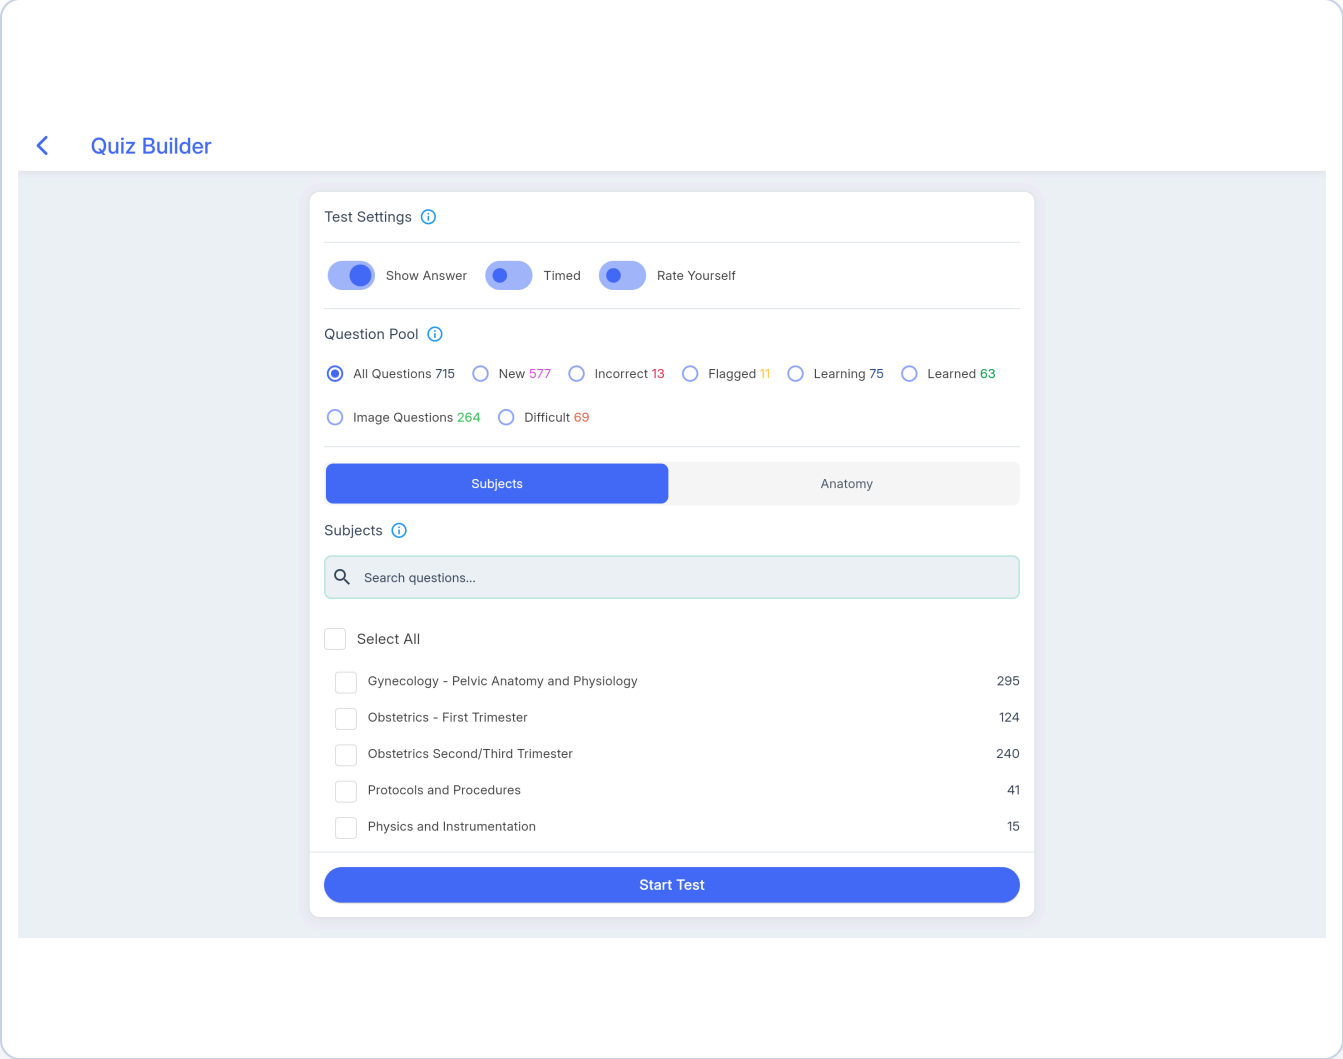

1. New questions have not been encountered yet.
2. Learning questions need more retrieval and review.
3. Mastered questions have met the current mastery rule and need less frequent attention.

Use self-rating honestly. Hard questions should come back sooner than easy ones.

Build practice around your weak spots

Create a practice session that matches the subject, count, and difficulty you need today.

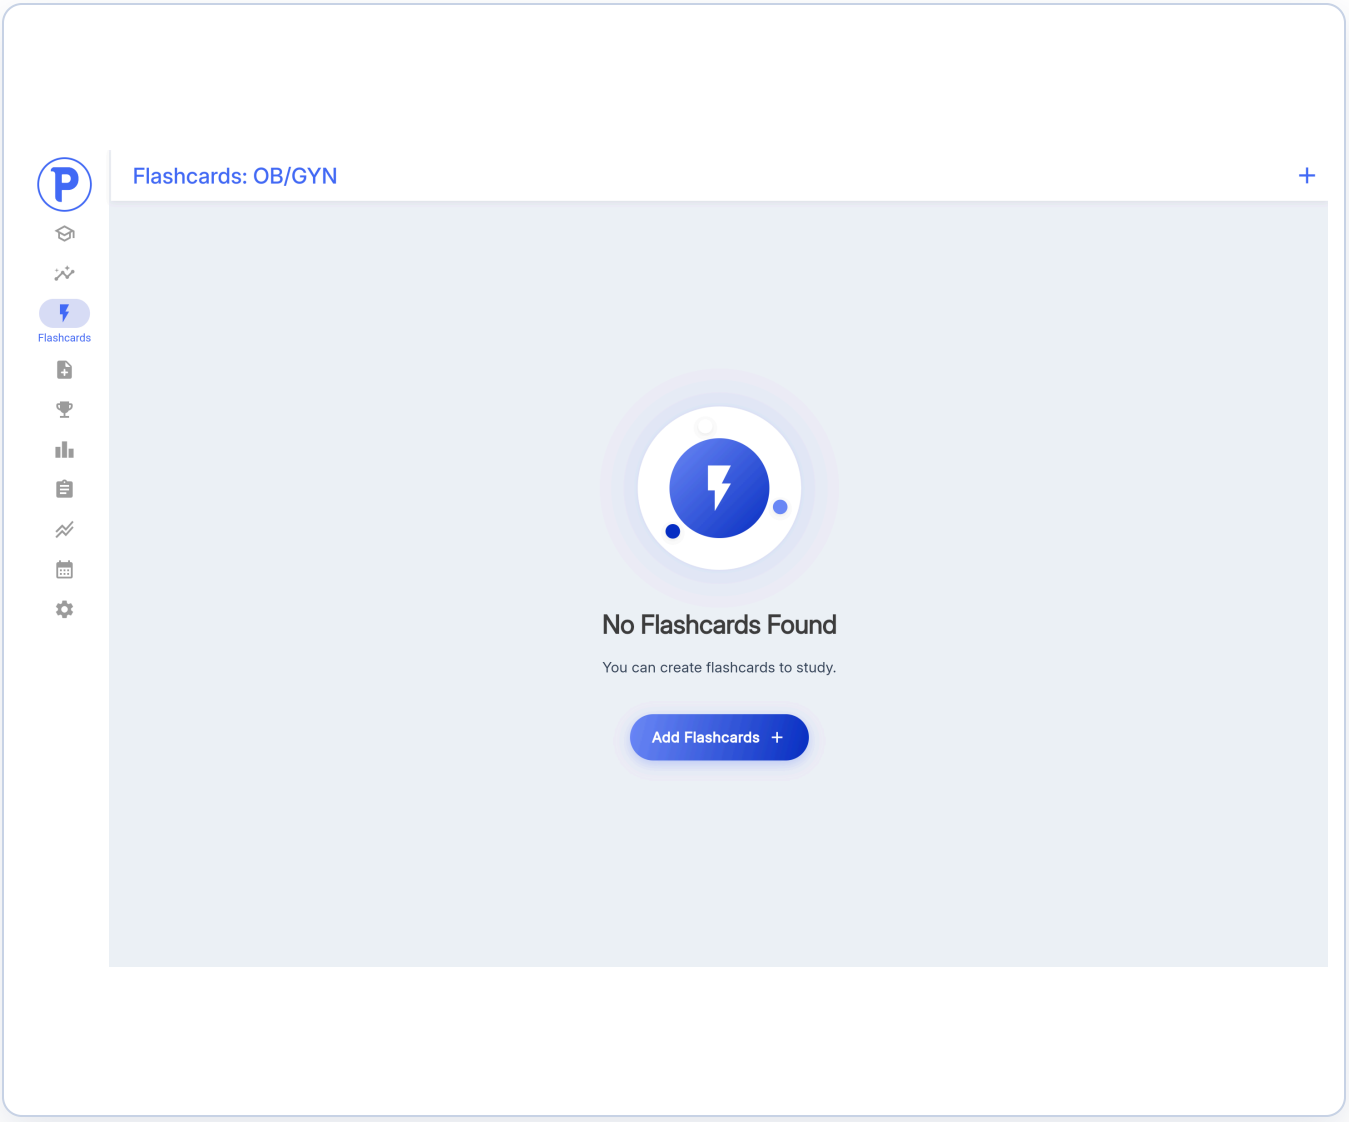

1. Select the exam area or subject.
2. Choose the number of questions.
3. Start a targeted session and use the explanations to close the gap.

A custom session is useful when your stats point to a specific weak domain.

Flashcards

Turn difficult questions into a deck you can review anywhere.

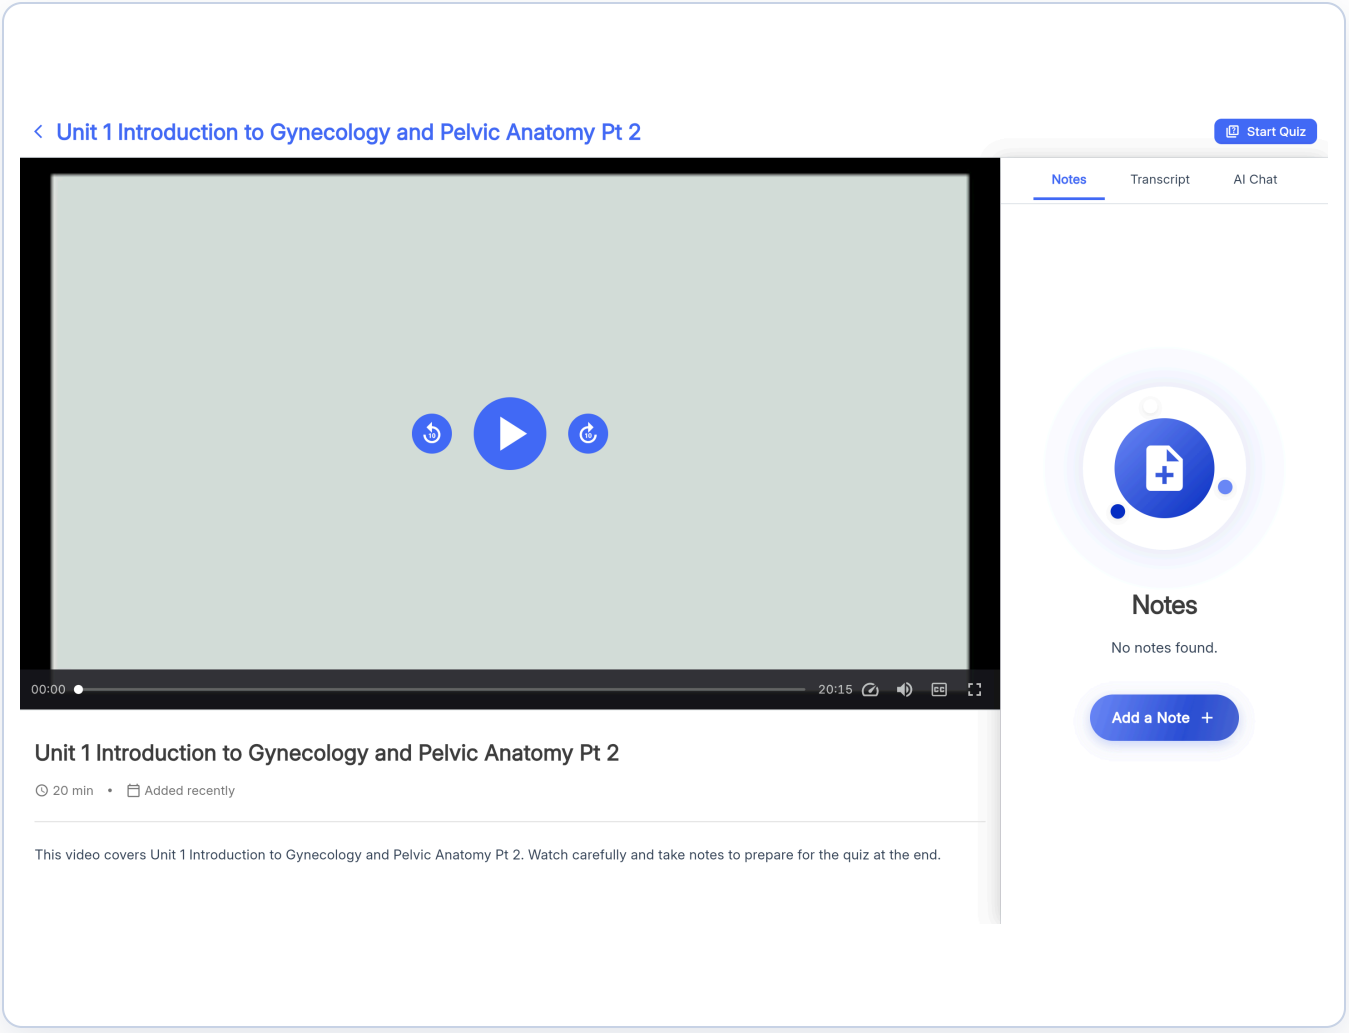

1. Open a deck and choose a session size.
2. Read the front, reveal the answer, and review the explanation.
3. Create, edit, or delete your own cards when you need a custom review set.

Flashcards are a separate review workflow, not just a button attached to a question.

Video Review and AI tools

Use expert-led video lessons, notes, transcripts, speed controls, and lesson-specific AI support.

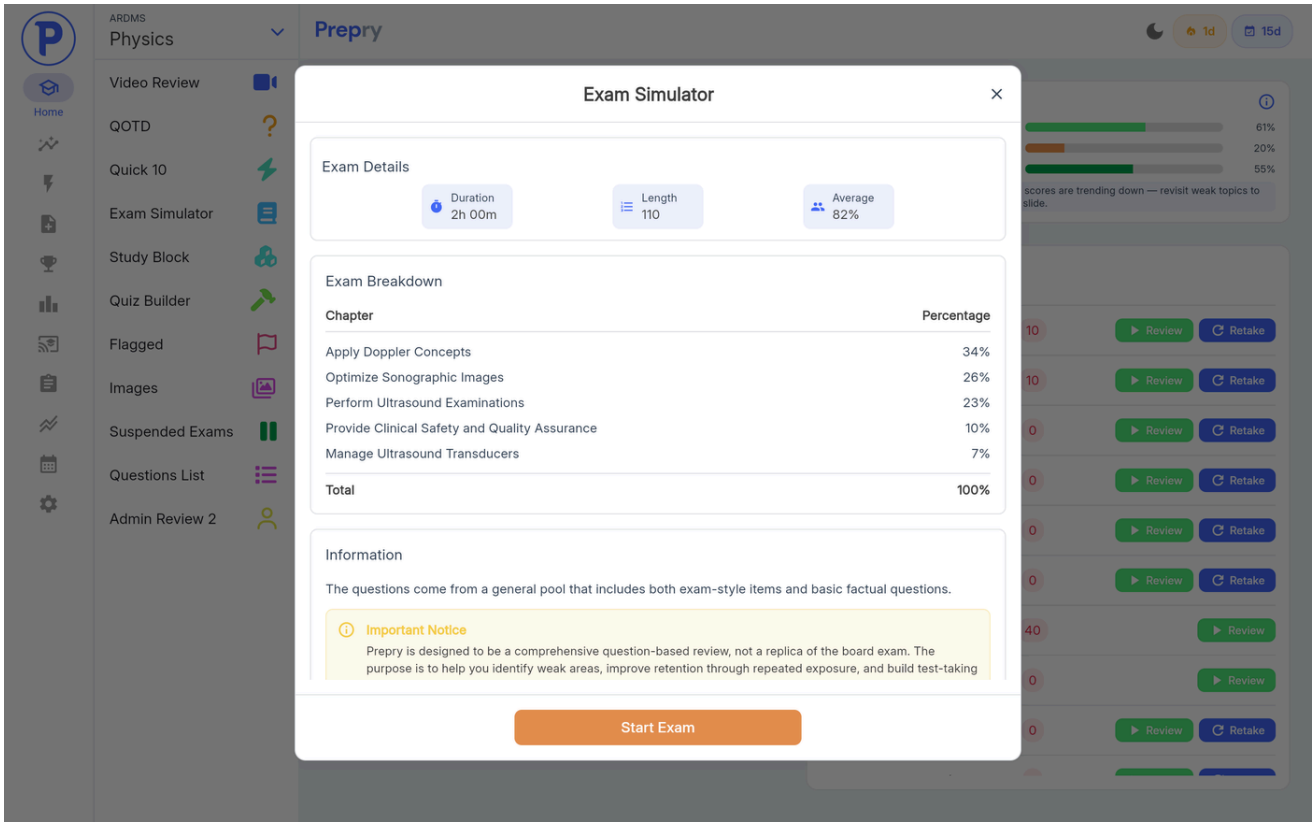

1. Open a course and choose a lesson.
2. Use Notes, Transcript, and playback speed controls while you watch.
3. Use Video AI Chat or Ask Prep to ask about the lesson in context.

AI features are study aids, not medical advice. Verify high-stakes information with your instructors and course materials.

Exam Simulator setup

Tutor Mode teaches while you work. The Exam Simulator is for practicing the conditions of the test.

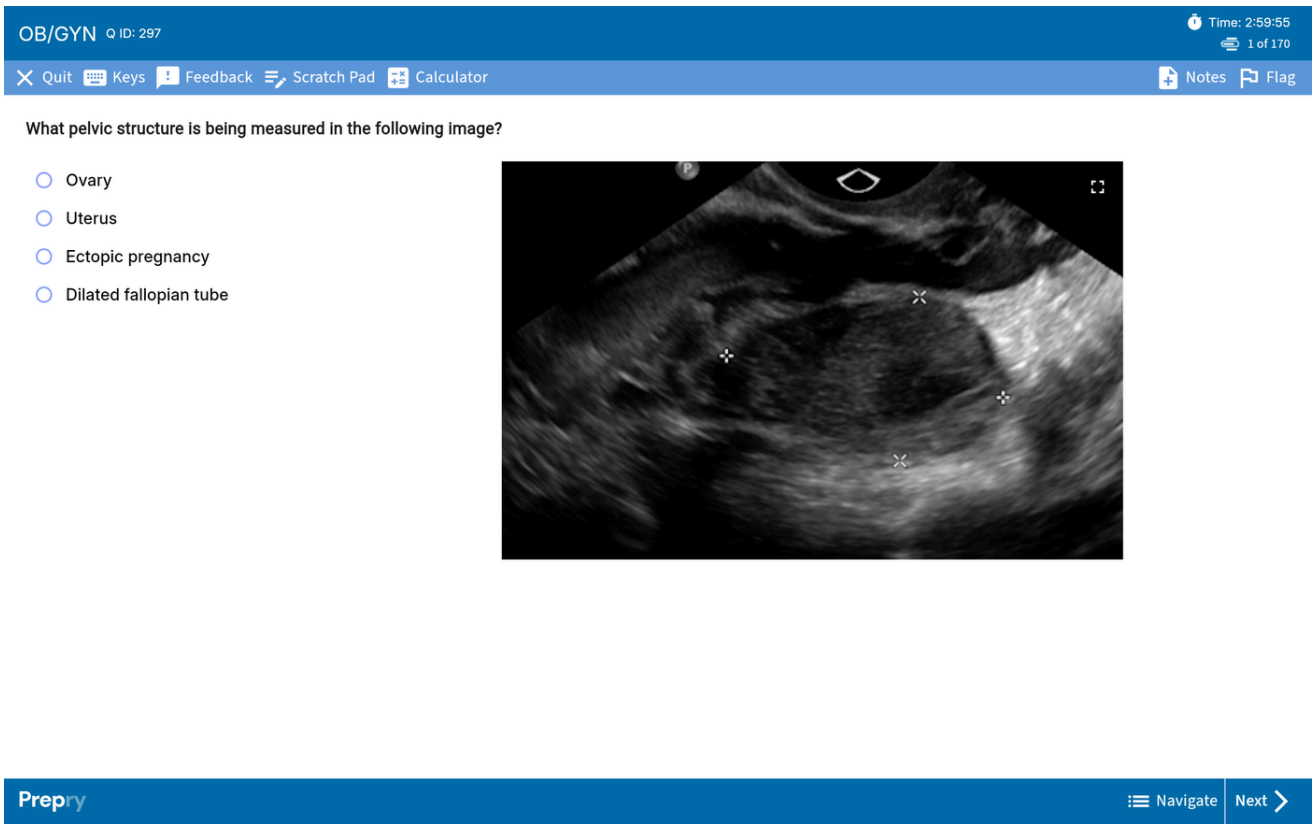

1. Review the exam length and question count.
2. See the blueprint-aligned content breakdown.
3. Start only when you can complete the session without Tutor Mode help.

Start the simulator when you have time to finish it in one sitting.

Take the simulated exam

The simulator withholds feedback until you submit, so you can practice making decisions under test conditions.

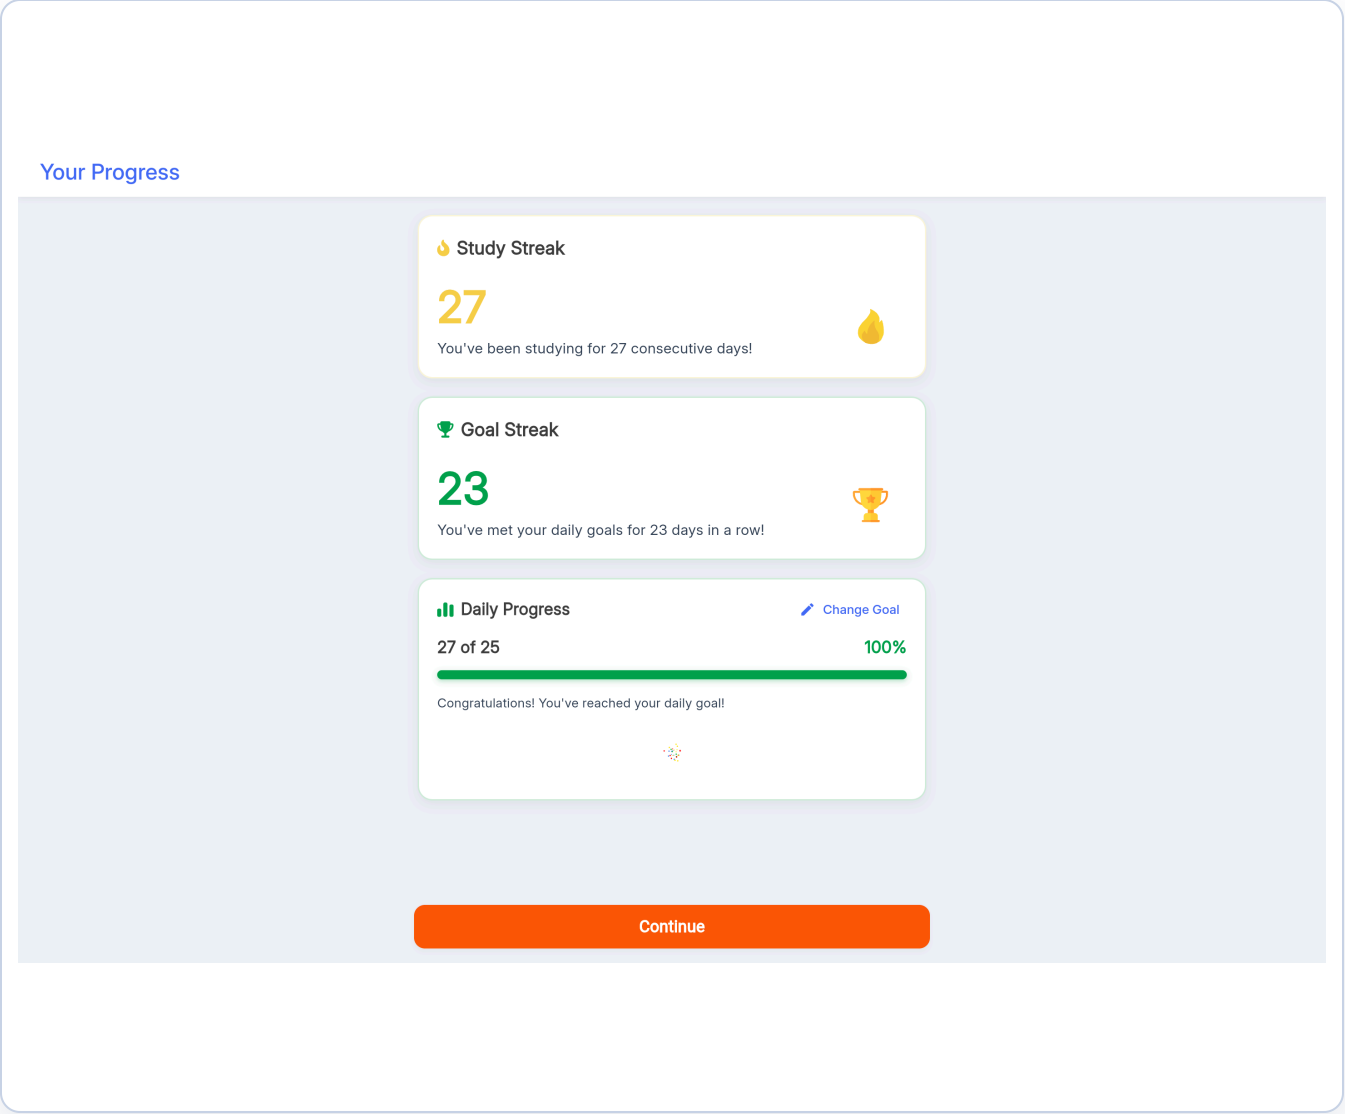

1. Work through the questions with the timer visible.
2. Use the calculator, scratch pad, and navigator when needed.
3. Flag questions you want to revisit before submission.

A simulator is a rehearsal. It is not a promise of a particular exam result.

Review the result, not just the score

The value of a mock exam comes from what you do after you finish.

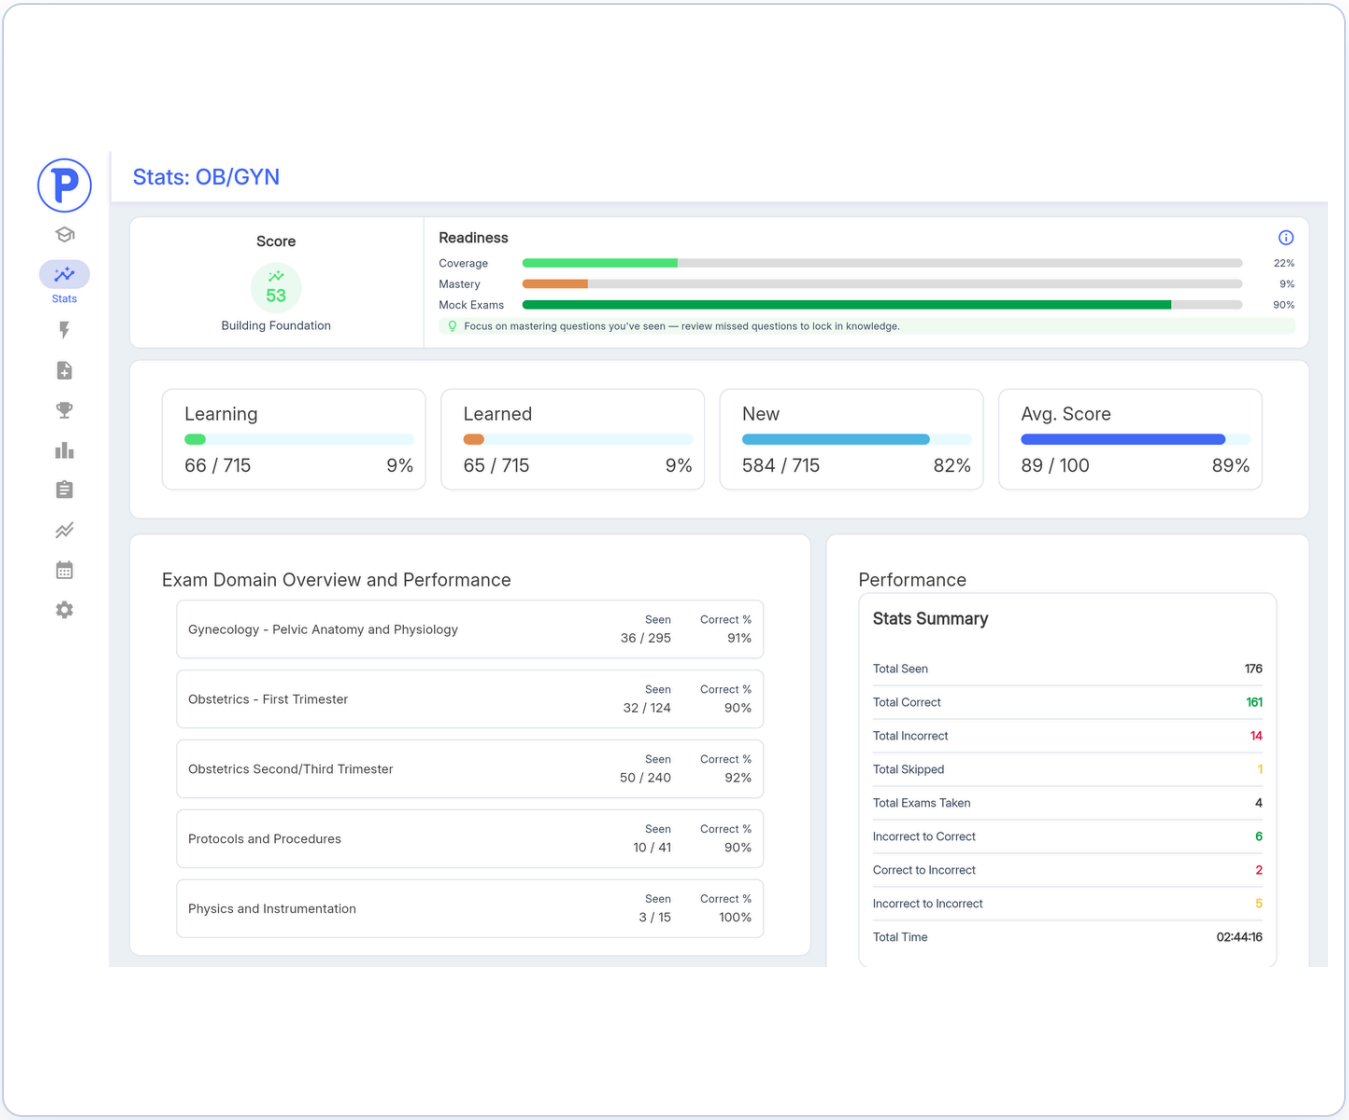

1. Open the result from recent activity or the exam list.
2. Review questions one by one and revisit flagged items.
3. Turn mistakes into notes, flashcards, or the next focused block.

If you pause partway through, use the suspended-exam path where available.

Find the domain that needs you

Stats turn a vague feeling of being behind into a specific study decision.

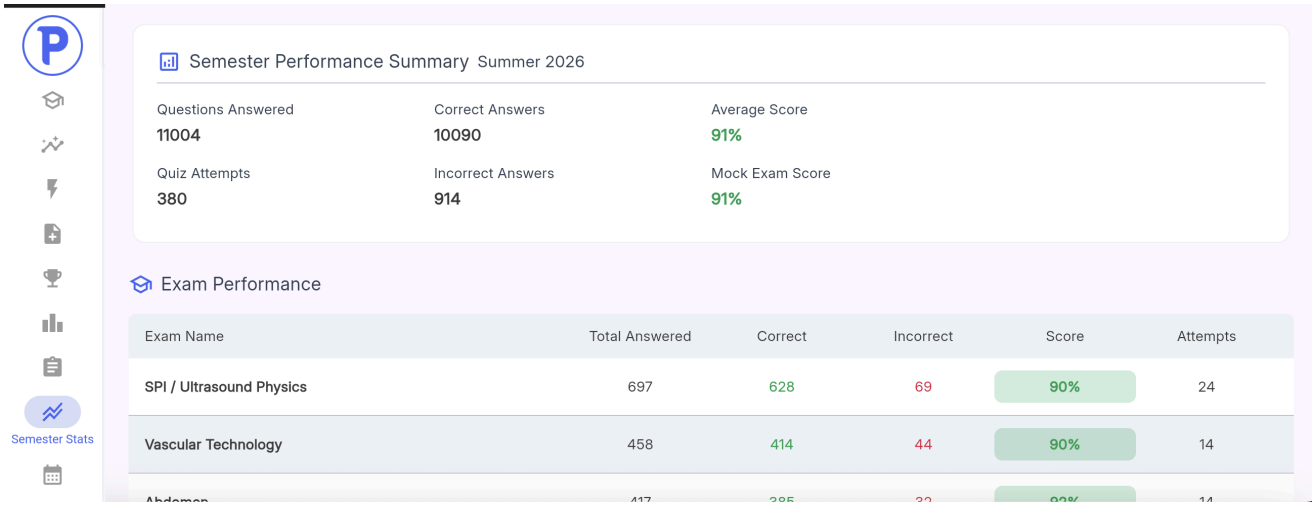

1. Review readiness and question-status counts.
2. Compare performance by domain.
3. Choose the weakest area for your next session.

Use trends and patterns over time, not one unusually good or bad session.

See progress across the semester

Semester Stats shows the longer view across everything you have studied.

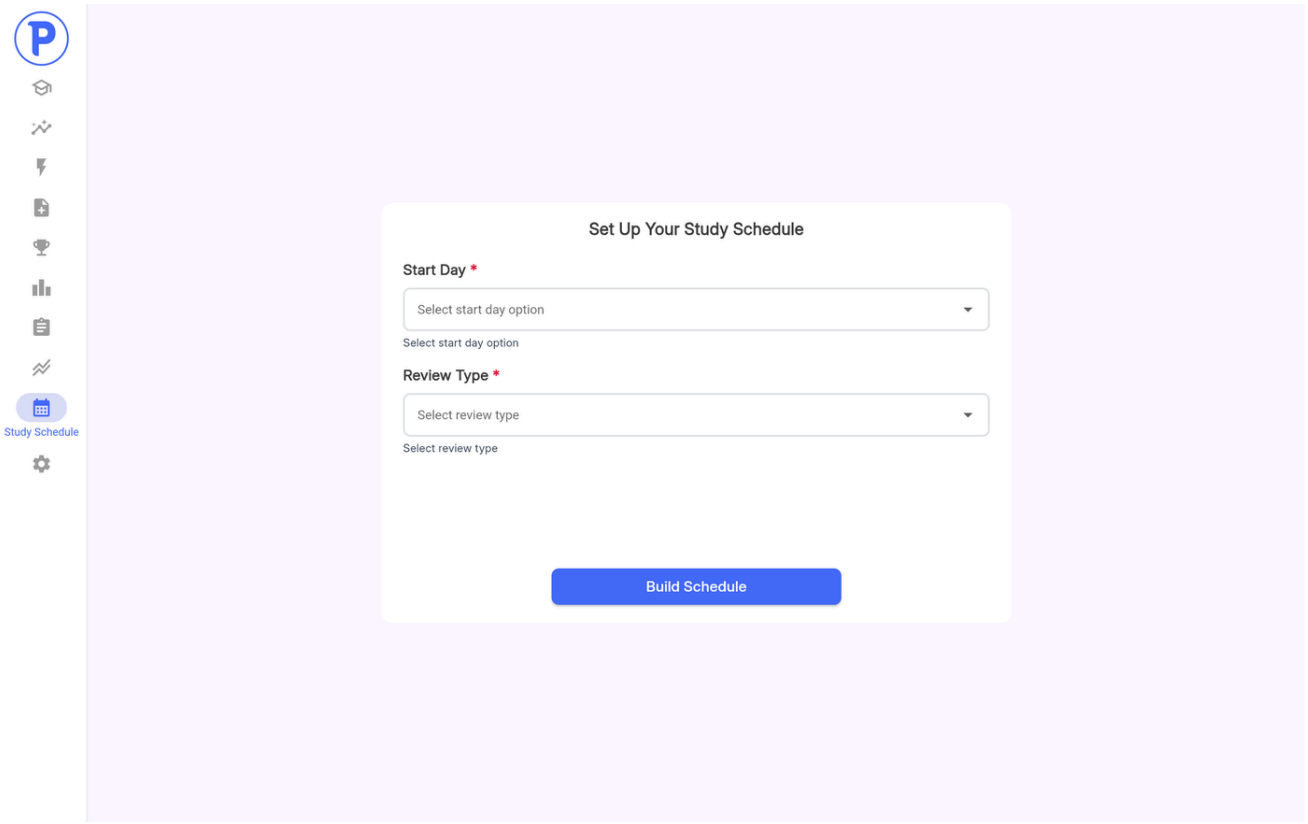

1. Choose the semester you want to review.
2. Compare questions answered, correct and incorrect answers, average score, and quiz attempts.
3. Use the exam-by-exam breakdown to decide where to focus next.

Look for steady progress over the semester, not a perfect score on every exam.

Let the exam date shape the week

A date-driven schedule gives each day a manageable job instead of leaving preparation to the last minute.

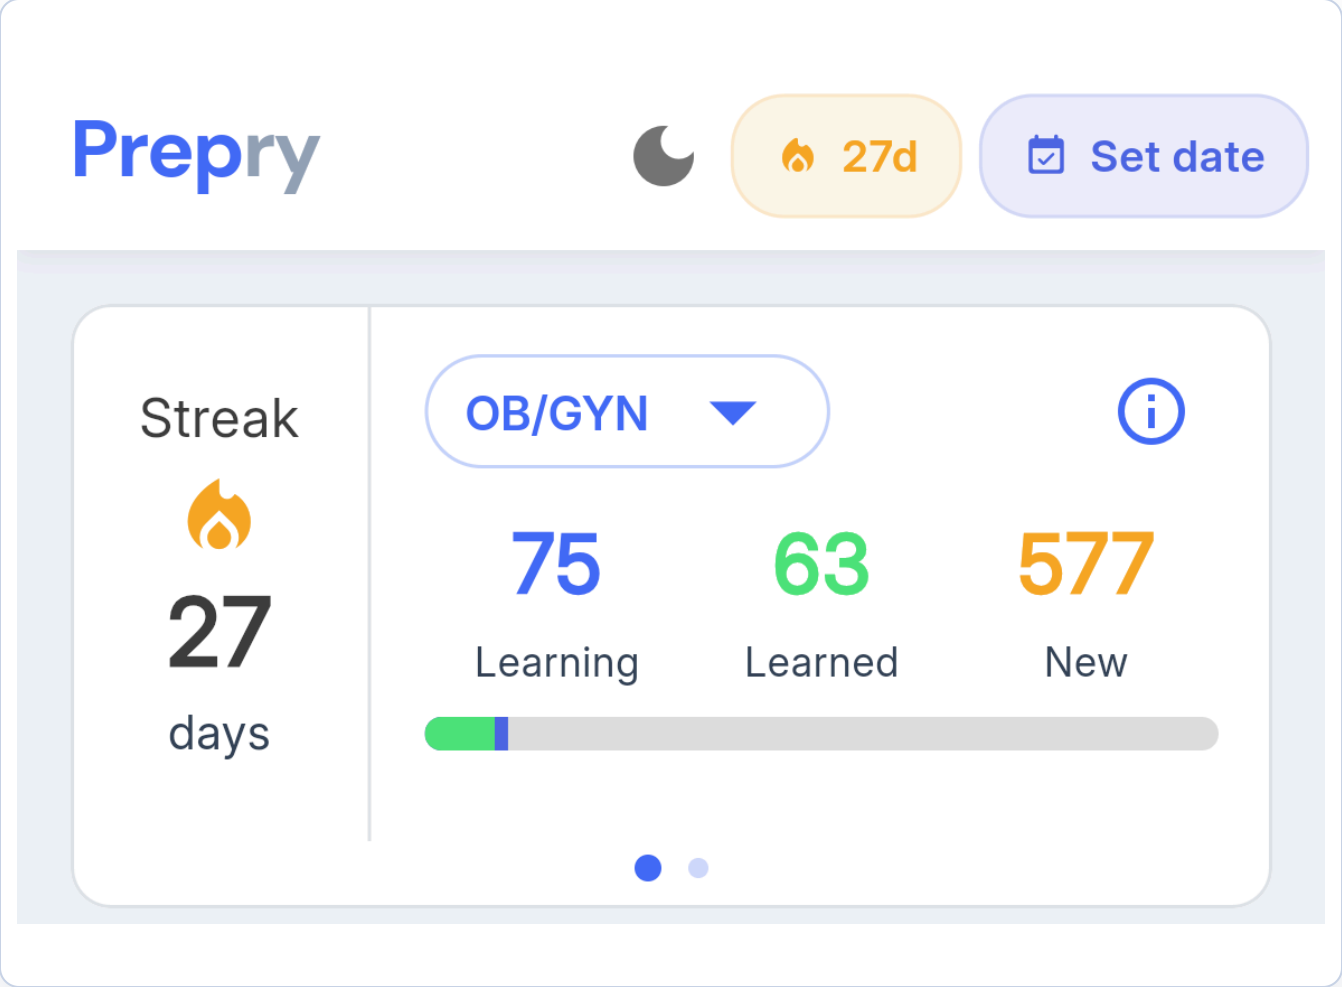

1. Set or update your exam date.
2. Open the current day to see the assigned activities.
3. Move through the plan consistently and adjust when life interrupts.

The schedule is a guide. Your stats tell you where to spend extra time.

Build the habit that gets you back tomorrow

Progress comes from returning to the work. Streaks, XP, and achievements make consistency visible.

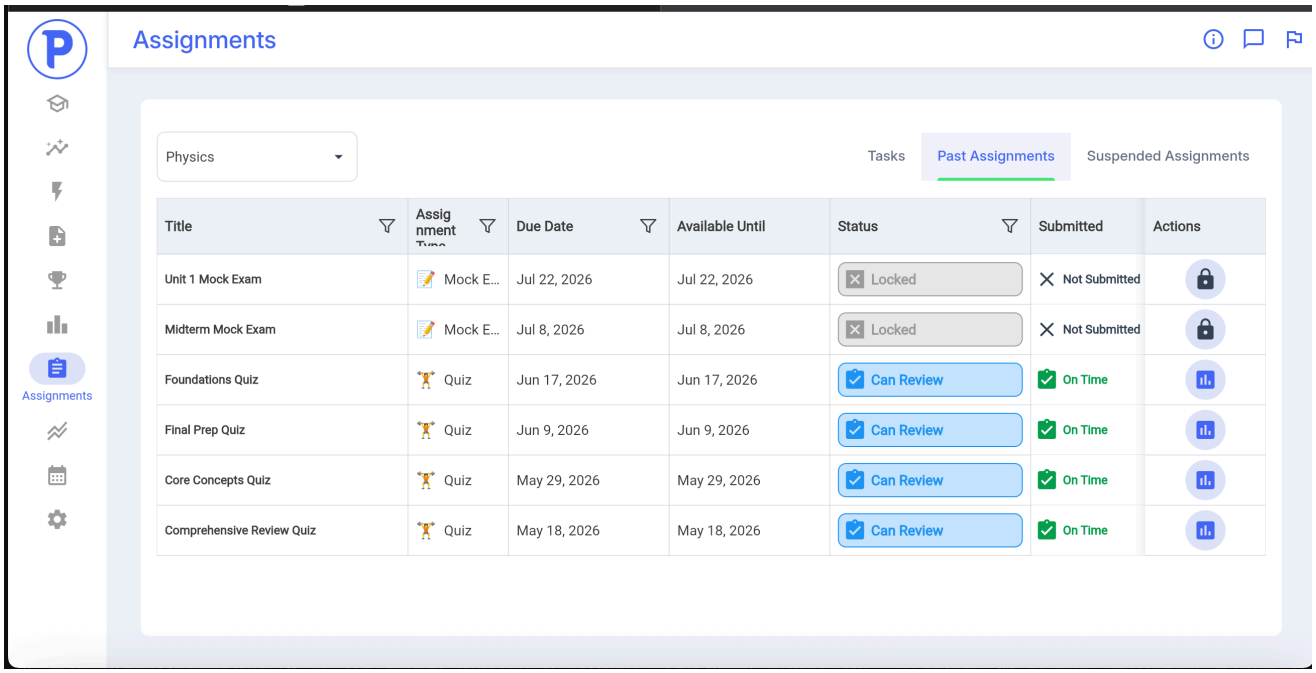

1. Set a small daily target you can repeat.
2. Use streaks and achievements as reminders, not pressure.
3. Keep your attention on learning rather than comparing yourself to someone else.

A few focused minutes every day beats one long session once a week.

Assignments and your program

If your program uses Prepry, your instructor's assignments appear in one place so you know what is due.

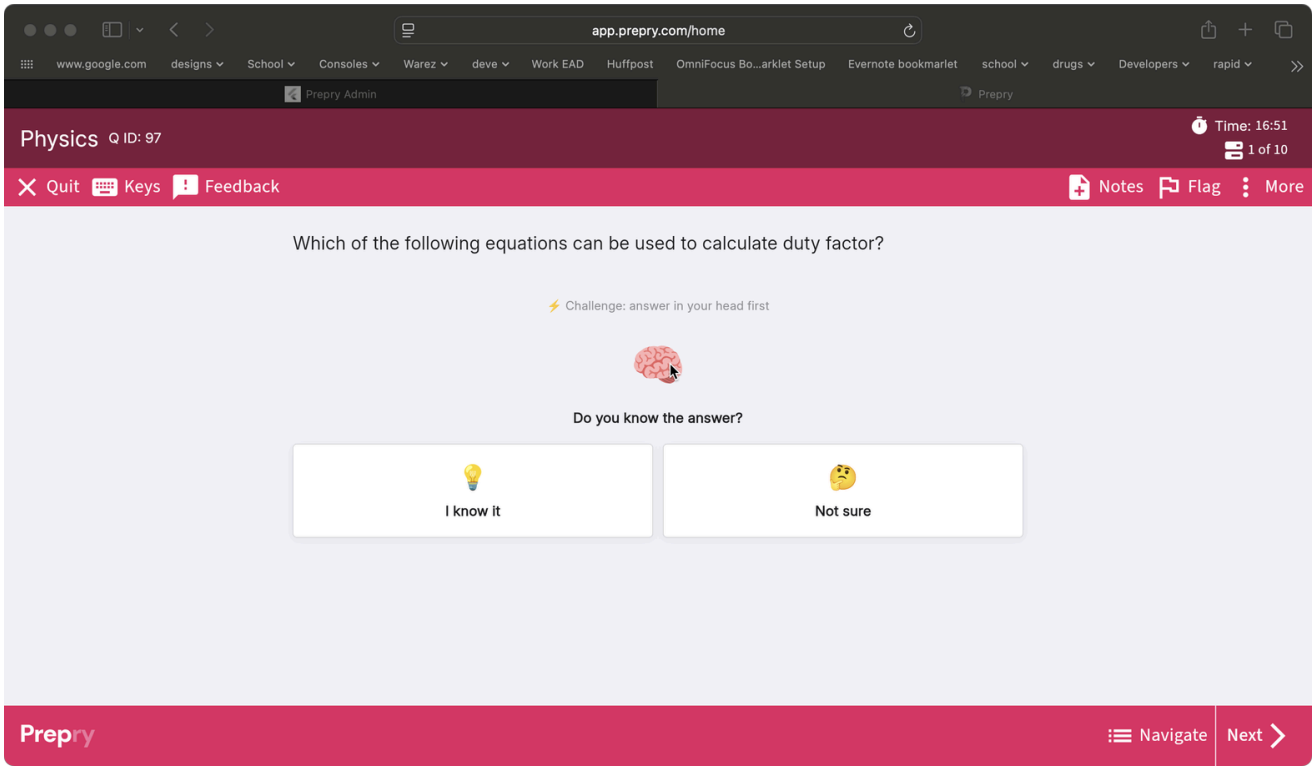

1. Join your classroom with the code from your educator.
2. Open Assignments to see current Tasks, Past Assignments, and Suspended Assignments.
3. Complete the assigned quiz, mock exam, Tutor Mode set, or video review, then use your results to guide your next study block.

Past Assignments shows status, submission state, due dates, and review actions.

Start with one question today

You do not need to finish everything today. Open Prepry, answer one question, and let the next action become clear.

1. Open Prepry and confirm you are signed in with the right email.
2. Answer the free daily question or start your assigned activity.
3. Use the explanation to choose tomorrow's next step.
