IMPORTANT DISCLOSURES

This catalog is published to inform prospective and current students about the Center for Ultrasound Research and Education's (CURE) academic programs, policies, tuition, fees, administration, and faculty. It is intended for informational purposes only and does not constitute a contractual agreement between CURE and any individual.

Certain information in this catalog is subject to change, including approved courses, curricula, and teaching personnel. All teaching personnel are licensed individually by the New York State Education Department, and all courses and curricula are independently reviewed and approved by the Department. As a result, a course or curriculum listed in this catalog may not yet be approved at the time a student enrolls, or the listed teaching personnel may have changed. Prospective and current students are encouraged to consult the Campus President to confirm the current status of any information presented herein; the most complete and current information is available from that office.

CURE reserves the right to make changes to any information in this catalog, including organizational structure, policies and procedures, equipment, materials, curriculum, fees, and courses of instruction, as circumstances dictate and at the direction of the Administration and Chief Executive Officer, without prior notice to individual students. When class size and curriculum permit, classes may be combined to support meaningful instruction and enhance student interaction. Any such revisions will be issued in a Catalog Addendum, which is considered an integral and enforceable part of this catalog.

Students are expected to read and understand the information presented in this catalog, all applicable Catalog Addenda, and all applicable Student Handbooks. Failure to read this catalog does not exempt any student from compliance with the requirements, policies, or procedures contained herein. Each student is responsible for remaining informed of current graduation requirements for their program.

Any questions regarding this catalog that have not been satisfactorily addressed by the institution may be directed to the Bureau for Proprietary School Supervision, 116 West 32nd Street, 5th Floor, New York, NY 10001. Telephone: (212) 643-4760. Fax: (212) 643-4765.

As a prospective student, you are encouraged to review this catalog prior to signing an enrollment agreement.

ABOUT CURE

5 OUR MISSION

The Center for Ultrasound Research and Education is dedicated to educating students through a highly specialized program in Diagnostic Medical Sonography, Vascular Technology, and Echocardiography. We combine extensive clinical laboratory training with comprehensive didactic instruction and collaborative research to prepare graduates who provide vital services to patients and physicians by efficiently and accurately identifying disease.

CURE provides postsecondary career education to both traditional and non-traditional students through its Allied Health Ultrasound certificate program, helping students enhance their career opportunities while developing a desire for lifelong learning. We believe in making an important contribution to the economic growth and social well-being of our community.

Our Goals

- Develop each student's individual and professional growth, including written and interpersonal communication, critical thinking, and problem-solving skills.
- Expose students to pragmatic course content that reflects contemporary career practices in the allied health field.
- Promote self-discipline and motivation so that students may enjoy success in their careers and in society.
- Attract and retain qualified instructors who are familiar with current medical and technical practices.
- Offer a sound, dynamic program of study that remains responsive to the healthcare community.
- Minimize economic disadvantages as barriers to postsecondary education through financial aid services.
- Accept qualified students without regard to age, sex, religion, race, physical challenges, or economic or social background.
- Assist graduates in finding employment as entry-level sonographers.

3, 4 SCHOOL HISTORY AND OWNERSHIP

CURE is a privately held corporation providing career education through its certificate program. It was founded in October 2007 by Karen Nussbaumer, former Technical Manager of Massachusetts General Hospital's Ultrasound Department and founder of Gulf Coast Institute, the first specialized ultrasound school in the country. Karen is a lifelong educator, scientist, inventor, and published medical author.

Alongside Karen, Lisa Kempa, former CFO of Cole Haan and financial executive with companies including Nike (Converse) and The North Face, serves as CURE's Chief Financial Officer and Chief Administrative Officer. In 2013, CURE added equity partners who hold a minority share.

CURE originally opened on North Avenue in New Rochelle, New York, and has been relocated to the former Kraft Foods building in White Plains, New York, since 2008, training the next generation of skilled sonographers. CURE received its New York State Education Department license to operate in January 2009 and achieved ABHES accreditation in 2013.

14 FACILITIES AND EQUIPMENT

CURE operates in a 12,000 square-foot facility at 333 Westchester Avenue, Suite W101, White Plains, NY 10604. The school is housed in a professional business complex and consists of:

- Six classrooms equipped for didactic instruction with internet access and projection systems
- Four skills laboratories that contain over 40 ultrasound machines and probes, medical exam tables, phantoms, and other specialized training equipment
- A Library Resource Center with health reference books and digital resources
- Administrative offices housing the Academic, Student Support, Financial Aid, Registrar, Admissions, and Business departments
- A faculty workroom

Clinical and externship sites are located in physicians' offices, hospitals, and professional medical facilities throughout the New York metropolitan area. The building complex provides ample parking at no additional charge to students or staff.

HOURS OF OPERATION

Administrative Offices	Monday through Friday, 8:00 AM to 6:00 PM
Day Classes	Typically Monday, Wednesday, and Friday, 8:00 AM to 5:00 PM
Additional Schedules	Contact the Admissions Department for other available schedules

Day classes are typically offered on Monday, Wednesday, and Friday from 8 AM to 5 PM. Other schedules during the day and interested students should check with the Admissions Department prior to enrollment.

SECURITY AND SAFETY

Students are responsible for their own safety and must be aware of the safety of others. The Institution is not responsible for any student's personal belongings that are lost, stolen, or damaged on campus, in parking lots, at clinical/externship sites, or during any school activities. Students should immediately report any medical, criminal, or other emergency occurring on campus to their Instructor, Program Director, or any school employee. Upon receipt of any report of a medical or criminal emergency, the Institution will, on the student's behalf, obtain the services of medical or security professionals, as appropriate.

HEALTH AND SAFETY REQUIREMENTS

The Institution strives to provide a safe and secure environment for its students. Classrooms and laboratories comply with the requirements of the appropriate regulatory agencies. Students must meet health and safety requirements based on individual program needs. Because many students at the school are involved in direct patient care in health care careers, they may be exposed to high-risk conditions and must be protected. Patients must also be protected from potential health risks posed by students. Individual programs may have clinical or externship requirements that must be met before the first day of the clinical or externship class. Each program is responsible for tracking and maintaining clinical health and safety requirements and ensuring that students meet the specific program requirements. All students must meet the requirements of the clinical/externship site to which they are assigned. If a student does not meet the requirements for the site, the student may become ineligible to participate in the specific program of study and unable to complete the program. Required Federal Disclosure Information For information on graduation rates and other important information, visit the consumer information page of CURE's website (www.cure.edu).

LICENSURE, ACCREDITATION, & APPROVALS

Licensure confirms that an institution has met the minimum requirements established by the state; however, it does not constitute an endorsement or guarantee of educational quality. Licensure is also not equivalent to, nor synonymous with, accreditation by an accrediting agency recognized by the U.S. Department of Education. All current licensure and accreditation certificates are displayed in the CURE lobby. Students may request copies by submitting a written request to the Campus President.

Institutional and program assessments are conducted periodically by qualified evaluators from both the state licensing agency and the institution's accrediting body. These evaluations review and verify the school's compliance with all applicable written standards, policies, and regulatory requirements. Assessments encompass all programs, as well as the performance and compliance of staff and faculty.

6 LICENSE TO OPERATE IN NEW YORK STATE

The Center for Ultrasound Research and Education (CURE) has been licensed by the New York State Education Department (NYSED), Bureau of Proprietary School Supervision (BPSS), since January 2009 and is authorized to award certificates to students who successfully meet all the requirements for graduation from the program.

<u>NYSED's Albany Office</u>
New York State Education Department
Bureau of Proprietary School Supervision
89 Washington Avenue, EBA 560
Albany, New York 12234
Telephone Number: (518) 474-3969
Facsimile Number: (518) 474-6543
General Questions for BPSS: BPSS@nysed.gov

<u>NYSED's New York City Office</u>
Bureau of Proprietary School Supervision
116 West 32nd Street, 5th Floor
New York, New York 10001
Telephone Number: (212) 643-4760
Facsimile Number: (212) 643-4765

Students may direct complaints about the school to the Bureau of Proprietary School Supervision at the addresses listed above.

Out-of-State Student Disclosure

Students who attend CURE but commute to externship sites outside of New York State should be aware that NYSED's Bureau of Proprietary School Supervision does not have jurisdiction over complaints related to out-of-state activities. Students assigned to sites in Connecticut or New Jersey may file complaints with those states' education departments.

State of Connecticut	State of New Jersey
Office of Higher Education 450 Columbus Boulevard, Suite 707 Hartford, CT 06103-1841 Phone: (860) 947-1801 www.ohe.ct.gov	NJ Department of Education 100 Riverview Plaza, P.O. Box 500 Trenton, NJ 08625 Phone: (609) 376-9115 school.ethics@doe.nj.gov

Please be advised that, until further notice, anyone wishing to file a complaint with, or to request an advisory opinion from, the School Ethics Commission must submit an electronic copy of the filing to school.ethics@doe.nj.gov in addition to mailing a hard copy.

7 NATIONAL ACCREDITING AGENCY

The Center for Ultrasound Research and Education (Institution ID: I-334) holds Institutional Accreditation since August 2013 from the Accrediting Bureau of Health Education Schools (ABHES). ABHES is recognized by the U.S. Department of Education as a national accrediting agency. It has held this designation since 1969, certifying the quality of private, postsecondary institutions and programs focusing on allied health education.

<u>Main Office</u>
6116 Executive Boulevard, Suite 730
North Bethesda, MD 20852
Telephone Number: (301) 291-7550

FEDERAL TITLE IV PROGRAM AUTHORIZATION

CURE is authorized by the United States Department of Education to participate in the following Title IV, HEA federal student assistance programs:

- Federal Pell Grant
- Federal Direct Subsidized Loans
- Federal Direct Unsubsidized Stafford Loans
- Federal Direct Parent Loans for Undergraduate Students (PLUS)

For more information, visit www.studentaid.gov.

VETERANS BENEFITS

CURE's Diagnostic Medical Sonography, Vascular Technology, and Echocardiography (DMS, VT, E) Allied Health Certificate program is approved by the Bureau for Veterans Education to train veterans and other eligible persons. Contact the School Certifying Official in the Registrar's Office for assistance.

PROGRAM ADVISORY BOARD

CURE's Advisory Committee comprises qualified individuals in the allied health care field, institutional staff, faculty, and school graduates. The Committee addresses topics such as the institution's mission, objectives, and curriculum; skills lab equipment; textbooks used in the program; student, graduate, and employer survey results; graduation and employment rates; and the school's Institutional Effectiveness and Program Effectiveness Plans. The Advisory Board assists the institution in its mission to continuously improve its academic programs and ensure students receive appropriate training to prepare them as entry-level sonographers. Refer to the table of contents for the page listing the Program Advisory Board members.

ULTRASOUND REGISTRY CREDENTIALING RECOGNITION

Upon successful completion of the CURE program, graduates may be eligible to sit for credential examinations administered by one or more of the following nationally recognized registries, depending on their educational background at the time of enrollment:

Registry	Eligibility Pathway	Contact
CCI Cardiovascular Credentialing International	Track 1: High School Diploma (primary pathway) RCS and RVS credentials.	cci-online.org 3739 National Drive, Suite 202 Raleigh, NC 27612
ARRT American Registry of Radiologic Technologists	Track 2: Associate's Degree. General Sonographer or Vascular Sonographer credentials.	www.arrt.org 1255 Northland Drive St. Paul, MN 55120
ARDMS American Registry for Diagnostic Medical Sonography	Track 3: Bachelor's Degree or Higher. RDMS and RDCS credentials.	www.ardms.org 1401 Rockville Pike, Suite 600, Rockville, MD 20852

The Center for Ultrasound Research and Education (CURE) is recognized by the Cardiovascular Credentialing International (CCI) registry, which is the primary pathway for students whose highest level of education is a high school diploma to become registered sonographers in the field of Cardiac and Vascular Ultrasound.

CURE is recognized by the American Registry of Radiologic Technologists (ARRT). ARRT-registered, qualified CURE students may become General or Vascular Sonographers.

The American Registry for Diagnostic Medical Sonography® (ARDMS®) administers examinations and awards credentials in many areas of ultrasound. CURE students whose highest level of education is a Bachelor's degree are eligible, upon successful completion of the Allied Health Ultrasound program, to become credentialed as sonographers after passing the ARDMS registry exam in one of the ultrasound disciplines offered.

CURE cannot guarantee that graduates will be eligible to sit for any credentialing exam. Registry requirements are set by outside agencies and are subject to change. The school actively monitors registry updates and advises students accordingly.

GENERAL INFORMATION

REASONABLE ACCOMMODATIONS FOR STUDENTS WITH DISABILITIES

Applicants with mental or physical disabilities are welcome to apply for enrollment at CURE. The school is structured to meet the needs of students with disabilities, with elevators, accessible classrooms, restroom facilities, and parking. Disabled applicants are subject to the same entrance requirements as all applicants.

Americans with Disabilities Act of 1990

The Rehabilitation Act of 1973 (Section 504) and the Americans with Disabilities Act (ADA) of 1990 provide that qualified students with disabilities who meet CURE's technical and academic standards may be entitled to reasonable accommodations. Under these laws, a disability is defined as any physical or mental impairment that substantially limits a major life activity. Reasonable accommodations are intended to place students with disabilities on the same starting point as their nondisabled classmates, not to confer a special advantage. Accommodations do not include measures that fundamentally alter the nature of CURE's Diagnostic Medical Sonography, Vascular Technology, or Echocardiography programs, impose an undue financial burden on the school, or endanger the student or others.

CURE is committed to providing access to its programs, activities, and services whenever possible and will engage in a good-faith interactive process with all students with disabilities to identify appropriate reasonable accommodations.

CURE encourages students to request accommodations before the start of a school term, as the documentation and determination process may take time. However, accommodation requests will be accepted and considered at any time. Accommodations are not effective retroactively; students will not be able to redo assignments or retake exams with accommodations that were not in place at the time of the original submission.

Procedure

To receive protections under Section 504 and the ADA, students must self-identify as having a disability and request an accommodation. Any student requesting accommodations must provide appropriate documentation, establishing the existence of the disability and the need for accommodation. Required documentation includes:

1. Completed CURE 504/ADA Fact Sheet and Accommodations Request Form
2. Signed, specific identification of a qualifying disability from at least one authoritative third party (e.g., a physician or an accredited educational institution)

Timeframes

Documentation must be submitted at least 10 days before an accommodation can begin.

21 NONDISCRIMINATION STATEMENT

CURE does not discriminate on the basis of race, color, creed or religion, sex or sexual orientation, gender, age, national origin, physical or mental disability, or veteran status in its admissions, programs, activities, advertising, training, placement, or employment practices. The school administers all educational programs and related support services and benefits in accordance with this policy.

The Campus Registrar serves as Deputy Coordinator, and the Registrar serves as Coordinator of Title IX of the Education Amendments Act of 1972, which prohibits discrimination on the basis of sex in any education program or activity receiving federal financial assistance. All inquiries or complaints under Title IX should be directed to the Campus President at 333 Westchester Avenue, Suite W101, White Plains, NY 10604; by phone at (914) 448-2873; or by email at marlin@cure.edu. The Campus President is required to respond equitably and promptly to all complaints, with a response provided within seven working days.

The Center for Ultrasound Research and Education is obligated by and adheres to the provisions of::

- Section 493A, Title IV, Higher Education Act of 1965, as amended
- Title 38, United States Code, Veterans Benefits
- Title IX, Education Amendments of 1972
- Section 504, Rehabilitation Act of 1973
- Family Educational Rights and Privacy Act of 1974, as amended
- Drug Free Schools and Communities Act Amendments of 1989

Inquiries regarding the application of these laws and their implementing regulations may be directed to the Campus President at 333 Westchester Avenue, Suite W101, White Plains, NY 10604. Consumer disclosure information is available in the consumer information section of the CURE website at: https://www.cure.edu/consumerinfo and https://www.cure.edu/consumerinfo2.

ADMISSIONS INFORMATION

The institution seeks to admit students who possess the appropriate credentials and have demonstrated capacity or potential that indicates a reasonable probability of success in completing the educational programs offered by the school. To accomplish this, the institution evaluates all students and makes admissions decisions on an individual basis, following the admission policies set forth in this catalog. Applicants' families are encouraged to participate in the enrollment process so they may have an opportunity to ask questions. Students must complete the entire admissions process on or before the first day of class. Students who fail to complete the admissions process before the first day of class may be required to reschedule to another start date.

11 ADMISSIONS AND PROCEDURES

Each applicant for admission is assigned an admissions representative who guides the applicant through the admissions process, provides information on curriculum, policies, procedures, and services, and assists the applicant in scheduling necessary appointments and interviews.

Admission decisions are based on the applicant's fulfillment of these requirements, a review of the applicant's previous educational records, the entrance exam, and the applicant's career interests. It is the applicant's responsibility to ensure that CURE receives all required documentation. All records received become the property of CURE.

GENERAL ADMISSION REQUIREMENTS

- The applicant must be a high school graduate or possess the recognized equivalent of a high school diploma. The applicant must provide documentation of high school graduation in the form of a valid high school transcript, diploma, or other acceptable documentation that confirms the applicant meets or exceeds the academic achievement equivalent to a standard high school diploma earned in the USA, as defined by the State where the diploma was earned. All documents from foreign countries must also be translated into English and evaluated by a credential evaluation service to be equivalent to or higher than a U.S. high school diploma.
- The applicant must be at least seventeen years of age at the time he or she begins his or her program of study.
- The applicant must complete an information form.
- The applicant must provide a valid form of ID that includes a photo, name, and address. Acceptable forms of ID include a valid and current driver's license, United States passport, or Permanent Resident card.
- The applicant must interview with an admissions representative.
- Applicants must pay the $100 enrollment fee and fulfill all tuition payment requirements.
- All students are required to pay a tuition deposit as part of the enrollment process. Deposits will be discussed during financial aid applications, and a determination will be made regarding balances not covered by federal or state aid programs.
- Accepted applicants must sign the CURE Enrollment Agreement. Note: Students under 18 must have their parents or guardians sign the Enrollment Agreement.
- Applicants must report any convictions or pleas of nolo contendere, even if a subsequent order expunged or dismissed the criminal record. Applications may be denied for knowingly falsifying or failing to disclose information in writing on the enrollment application or to any member of the admissions department.
- Applicants are required to disclose medical conditions that impair or limit their ability to participate in the didactic, skills, and externship portions of the program, thereby affecting their ability to practice the profession with reasonable skill and safety without exposing others to significant health or safety risks.
- Applicants must disclose whether, in the two years prior to enrolling in the program, they have engaged in the illegal use of controlled substances.

STANDARDIZED ENTRANCE TESTING POLICY

Applicants whose highest level of education is a high school diploma must take the Wonderlic Accuplacer Scholastic Skills Test and achieve a minimum score of 16 to be eligible for enrollment.

Applicants who do not pass on their first attempt may retest no sooner than one calendar day after receiving a failing score. If all attempts are unsuccessful, applicants must wait at least six months from their last attempt before testing again.

CREDENTIALING ELIGIBILITY

There are three pathways each student can take to become eligible to sit for credentialing exams with one of the Ultrasound registries upon graduation. The minimum educational requirement for applicants seeking admission to the Ultrasound program at CURE is a High School Diploma or equivalent. Each prospective student will meet with the Director of Admissions and the Program Director prior to acceptance into the program and before signing an enrollment agreement. The student's pathway to becoming a registered sonographer will be discussed before applying to CURE. The Program Director, Curriculum Specialist, and Clinical Site Manager review the latest information from each registry body to ensure students receive up-to-date information on ultrasound registry requirements and will inform students of any changes that impact the planned registry pathway.

Track 1 High School Diploma Credentialing Eligibility Information

Applicants who enroll with a high school diploma or its equivalent are eligible to take the Cardiovascular Credentialing International (CCI) Registered Cardiac Sonographer and Registered Vascular Specialist credentialing exams upon graduation. After passing the exam, the student is eligible to sit for the ARDMS registry exam or the ARRT credentialing exam.

Track 2 Associate's Degree Credentialing Eligibility Information

Applicants who enroll with an associate degree become eligible to sit for the American Registry of Radiologic Technologists (ARRT) Radiographic Technologist (Sonographer) credentialing exam. In addition, students are eligible to sit for the Cardiovascular Credentialing International (CCI) Registered Cardiac Sonographer and Registered Vascular Specialist credentialing exams.

Track 3 Bachelor's Degree or Higher Credentialing Eligibility Information

Applicants entering CURE with a bachelor's degree are eligible to apply for the American Registry of Diagnostic Medical Sonographers (ARDMS) credentialing exams and other registry exams.

CRIMINAL BACKGROUND AND ADMISSIONS POLICY

The institution generally does not accept applications for admission from prospective students with felony convictions. Students with felony convictions are likely to face significant challenges securing clinical placements and may be unable to obtain licensure or employment in their field of study. CURE does not believe students should make a substantial investment of time, money, and potential debt when the likelihood of successful employment in the field is uncertain. Therefore, it is incumbent on the enrolling applicant to disclose the nature of any criminal offense prior to enrolling in the program so that the school can guide the student regarding options that may or may not be available, depending on the severity of the offense.

Before an applicant is enrolled in the program, full disclosure of the nature of any legal issue is required. The applicant will be directed to speak with the credentialing agency and will be required to submit documentation regarding the nature of the legal issue. The credentialing agency will review the applicant's eligibility for registration. Students are advised to be candid about any court action that results in an arrest record. Any offense other than a minor traffic violation must be submitted to the credentialing agency for review.

Applicants must disclose the nature of any legal issue to the credentialing agency and obtain written documentation confirming that the record will not prevent credentialing upon completion of the program. Applicants convicted of a felony whose civil rights have not been restored may be considered to have an incomplete application until documentation of civil rights restoration is received. Students must consult the credentialing agency for specific guidance before enrolling.

Students with criminal records that include felonies or misdemeanors, including those that are drug-related, sexual, or violent in nature, or other personal background issues, may not be accepted by clinical agencies or employers. It is the responsibility of all applicants to disclose any circumstance that may impact their ability to successfully complete the program.
All applicants must submit to a national background check screening as a condition of admission. The fee for this screening is $150.00.

TOXICOLOGY SCREENING

Prior to clinical rotations, students must submit a toxicology screening from a designated and approved testing facility. The cost of this test is $40.00. Students who enroll and are accepted fewer than five days before the start of a program must provide proof that the drug test was completed within 48 hours of receiving the Quest Diagnostics Testing Form. Due to the nature of the medical profession and the obligation of all medical personnel to act in the best interest of patients, a positive toxicology report may result in immediate dismissal from the program.

HEALTH AND IMMUNIZATION REQUIREMENTS

The New York State Department of Health requires the following immunizations for all students entering post-secondary educational institutions: proof of immunity to measles, mumps, and rubella (MMR); varicella; and either proof of the meningitis immunization or a signed meningitis declination. These documents must be submitted to the Registrar for evaluation before the program begins. CURE's DMS program includes a 900-hour clinical externship rotation, during which the student will have direct patient care exposure. To protect both students and patients, all students must meet the following health and immunization requirements before beginning clinical rotations:

- Statement of good general health, signed by a licensed healthcare provider (M.D., D.O., N.P., or P.A.) within six months of the externship start date.
- MMR (Measles, Mumps, Rubella): Documentation of two MMR vaccinations on separate dates at least four weeks apart, OR positive titer results for all three. Negative or equivocal titers require documentation of at least 1 booster after the result.
- Tuberculosis (TB): Negative 2-step Tuberculin Skin Test (TBST) or a negative blood test (QuantiFERON or T-Spot) within the past six months. A positive TBST requires a negative blood test or chest X-ray within the past twelve months.
- Hepatitis B: Completed the three-dose vaccine series or have a positive titer confirming immunity. If students show no immunity, they must consult their doctor and receive at least 1 dose of the three-dose series before attending classes, then follow up with their doctor for the remaining shots. Students who fail to submit proof of shots 2 and 3 when requested will be withdrawn from the program until they are in compliance with the requirement.
- EXTERNSHIP: CPR/BLS Certification: American Heart Association Basic Life Support (Healthcare Provider or equivalent), including infant, child, and adult CPR with a hands-on skills component. Online-only courses are not accepted.
- Meningococcal: Proof of immunization or a signed meningitis declination form, submitted to the Registrar before the program start date.
- EXTERNSHIP: COVID-19 Vaccination: Required by most clinical partners. CURE strongly recommends that all students be vaccinated. Students without proof of vaccination may have limited clinical placement options.

All immunization documentation must be submitted to the Campus Registrar. Health requirements may change in response to clinical facility requirements; students will be notified promptly of any updates. If there are any questions about these requirements, students should schedule an appointment with their healthcare provider.

CLINICAL ROTATIONS AND EMPLOYMENT

Agencies and institutions that accept students for clinical rotations, as well as employers upon graduation, may conduct criminal and personal background checks and random drug testing. Students are responsible for any costs associated with these additional requirements. CURE expects all students to meet the criminal background check and drug testing requirements of its clinical partners.

PREGNANCY

Overview

CURE is committed to supporting students throughout all phases of their education, including pregnancy and related medical conditions. This policy applies to students enrolled in the Diagnostic Medical Sonography program who participate in clinical externship rotations. Nothing in this policy is intended to discriminate against any student based on pregnancy, childbirth, or related medical conditions, consistent with Title IX of the Education Amendments of 1972 and all applicable federal and state law.

Voluntary Declaration

Declaration of pregnancy is entirely voluntary. No student is required to disclose a pregnancy as a condition of enrollment, continued enrollment, or participation in any academic or clinical activity. CURE will not inquire whether a student is or may be pregnant.

Students who are pregnant or who become pregnant during the program are strongly encouraged to voluntarily declare their pregnancy to the Program Director. While the DMS program is grounded in ultrasound technology, clinical externship sites may include hospital settings with ionizing radiation, such as interventional labs, fluoroscopy suites, and cardiac catheterization labs. A voluntary declaration enables CURE and the clinical site to implement protective measures consistent with applicable regulatory standards, thereby reducing potential risk to the student and the embryo or fetus.
A pregnancy may be declared as soon as conception is confirmed or at any time during the pregnancy. To officially declare a pregnancy, the student must submit a completed Declaration of Pregnancy form to the Program Director.

Radiation Exposure in the Clinical Setting

For students who voluntarily declare a pregnancy, CURE will work with the assigned clinical site to ensure that the embryo or fetus receives no more than 500 millirem (5 mSv) of radiation over the entire pregnancy, measured from the estimated date of conception. This limit is consistent with the standards established by the Nuclear Regulatory Commission under 10 CFR 20.1208.

Options Upon Declaration

A student who voluntarily discloses a pregnancy has the following options:

1. Continue in the program, including clinical externship rotations, with reasonable accommodations to reduce radiation exposure to the regulatory limit described above and to address any documented medical restrictions.
2. Request a leave of absence for a period related to pregnancy, childbirth, or recovery. Students who take a leave of absence for pregnancy-related reasons are entitled to return to the program under the same conditions as any student returning from a medical leave of absence. See the Leave of Absence policy for more information.
3. Withdraw from the program with the option to re-enroll in a future cohort.

Students are encouraged to meet with the Program Director to discuss which option best fits their individual circumstances. CURE will make every reasonable effort to support students in completing the program.

Medical Documentation

If a student who has declared a pregnancy requests a specific accommodation, CURE may request supporting documentation from the student's treating physician identifying any restrictions relevant to clinical participation. This request will be made on the same basis as documentation required of any student with a temporary medical condition requiring accommodation. Blanket medical clearance will not be required as a condition of continued enrollment. Any documentation request will be limited to information necessary to facilitate the specific accommodation sought. If new restrictions arise after a prenatal visit, the student should promptly communicate them to the Program Director so the accommodation can be adjusted accordingly.

Undeclared Pregnancy

A student who chooses not to declare a pregnancy will remain in the program under the same conditions as all other students, including the standard occupational radiation limits applicable to all clinical students. CURE cannot implement protective radiation dose reductions or other pregnancy-related accommodations for an undeclared pregnancy. The school respects the student's right to make this decision and will not treat a student adversely for choosing not to disclose.

Nonretaliation

No student will be penalized, dismissed, or otherwise adversely treated because of pregnancy, childbirth, or related medical conditions, or for voluntarily declaring a pregnancy. Any student who believes they have been subjected to adverse treatment on this basis should report the matter to the Campus President in accordance with the school's Title IX grievance procedures.

Reinstatement

Students who take a leave of absence related to pregnancy or childbirth are entitled to return to the program at the same academic standing held before the leave, subject to cohort availability and applicable academic requirements. Students returning from pregnancy-related leave will not be required to satisfy any conditions that are not required of students returning from other types of medical leave.

Applicants

CURE does not inquire about pregnancy status during the admissions process, and pregnancy status will not factor into any admissions decision. Prospective students with questions about how pregnancy may affect program participation are encouraged to speak with the Program Director before enrolling.

NEGATIVE DRUG SCREEN

Please note that applicants who do not pass a drug screening will not be considered for admission. Applicants must submit to and pass a drug screen. Inconclusive test results, including dilute or insufficient samples, will require retesting within 24 hours at the applicant's expense at a school-designated collection center. A second inconclusive test result, including a dilute and/or insufficient sample, will be considered a positive drug screen. Students will not be granted admission to the program with a positive, insufficient, dilute, or inconclusive test result. If applicants have any questions regarding this process, they should schedule an appointment with the Program Director or the Campus President.

RANDOM DRUG AND ALCOHOL TESTING

Random drug and alcohol testing may occur throughout the program. Failure to comply or inability to provide a sample within one hour of a requested random drug/alcohol test may result in program dismissal. A dilute or insufficient sample on a random drug screen will be treated as a positive result, and students may be dropped from the program. In addition, healthcare facilities may require random drug testing before acceptance or during clinical rotations. If a student tests positive at any time, the student will be removed from the clinical site and may be subject to withdrawal from the program.

Applicants to the program who have questions about how these issues may affect their clinical placement, ability to graduate, or potential employment should discuss them with the Admissions Director and the Campus Registrar. The Institution does not control the decisions of outside agencies. A student who is unable to be placed on or is dismissed from a clinical rotation due to an adverse result on either a criminal background check or a random drug test may be responsible for finding their own clinical site or, in extreme cases, may be dismissed from the program.

TECHNICAL STANDARDS AND ESSENTIAL FUNCTIONS

The following standards serve as technical requirements for students enrolled in the Diagnostic Medical Sonography Program. These requirements reflect reasonable expectations for the Diagnostic Medical Sonography student and sonographer to perform common functions. The sonography student must be able to apply the knowledge and skills necessary to function in a wide variety of academic and clinical settings.

Every student in the sonography program must be able to learn and perform the following technical requirements:

Motor Skills

The student possesses sufficient motor capability to perform the movements and physical demands required for sonography practice, including but not limited to:

1. Ability to perform repetitive hand and upper extremity movements and sustain positions for extended periods of time, requiring fine and gross motor skills.
2. Ability to adjust, position, and move patients and equipment through carrying, bending, kneeling, twisting, stooping, lifting, crouching, pushing, pulling, and reaching overhead.
3. Ability to lift, move, and transfer patients between a wheelchair and an exam bed and between a stretcher and an exam bed.
4. Ability to lift up to 50 pounds.
5. Physical strength and endurance are sufficient to sit and stand for extended periods, carry equipment and supplies, and complete all required tasks during assigned clinical practice periods.
6. Fine motor skills, including the ability to pinch and pick up objects, grasp small objects with hands and fingers, write with a pen or pencil, and operate electronic equipment.
7. Ability to ambulate independently in the clinical setting.
8. Ability to respond immediately with coordination, speed, balance, and agility to patient emergencies.

Sensory Skills

The student possesses the sensory ability to obtain information in classroom and clinical settings, including but not limited to:

1. Visual acuity, corrected as necessary, to focus for extended periods, use depth perception and peripheral vision, differentiate subtle shades of gray, distinguish color changes and intensity for Doppler sonography and patient care, identify differences in shapes and objects, read and set equipment parameters, and distinguish letters at 12 point font at both close and distant ranges.
2. Visual ability, corrected as necessary, to recognize and interpret facial expressions, body language, and normal and abnormal patterns of movement.
3. Auditory ability to recognize and respond to soft voices, faint body sounds, auditory timers, equipment alarms, and call bells, and effectively use devices for measurement of blood pressure and Doppler sonography.
4. Hand and eye coordination sufficient for sonography scanning requiring fine and gross motor skills.
5. Tactile ability to palpate pulse, temperature, and vibration, and to detect changes in surface texture, palpable masses, skin temperature, body contour, muscle tone, and joint movement.
6. Olfactory ability to detect smoke and odors.
7. Sufficient positional awareness, movement, and balance to assist and safely protect patients who are ambulating, transferring, or performing other activities in the externship setting.

Communication Skills

The student demonstrates effective communication with peers, faculty, patients, and other healthcare providers at a level consistent with quality and safe patient care in all healthcare settings, including but not limited to:

1. Ability to read, write, speak, and understand English at a level consistent with successful course completion and patient safety, including handwritten and printed materials, policy and procedure manuals, and all patient medical records.
2. Ability to effectively interpret, process, and document information, including via computer.
3. Ability to establish professional and therapeutic rapport with patients, families, peers, faculty, and healthcare providers.
4. Ability to obtain a complete medical history, explain the examination to the patient, and communicate sonographic findings clearly and professionally to appropriate medical staff.
5. Ability to recognize, interpret, and respond to the nonverbal communication of self and others.

Behavior Skills

The student demonstrates professional conduct and sound judgment when interacting with a diverse population, including individuals of all ages, races, socioeconomic and ethnic backgrounds, and those with medical or mental health conditions, including but not limited to:

1. Ability to work simultaneously with multiple patients and colleagues.
2. Ability to maintain composure and professional conduct under stressful conditions, including care of medically or emotionally unstable individuals, situations requiring rapid adaptation, and emergency interventions such as CPR.
3. Ability to foster cooperative and collegial relationships with peers, instructors, healthcare providers, and patients.
4. Ability to express ideas and feelings professionally, and to give and receive feedback respectfully.
5. Ability to provide safe and competent patient care.

Critical Thinking and Cognitive Skills

The student possesses sufficient ability in calculation, critical problem-solving, reasoning, and judgment to comprehend and process information within a reasonable timeframe, as determined by faculty and the profession. The student must be able to prioritize, organize, and attend to tasks and responsibilities efficiently, including but not limited to:

1. Ability to engage in intellectual activities requiring critical thinking, judgment, and analysis.
2. Ability to measure, collect, interpret, and analyze written, verbal, and observed patient data.
3. Ability to demonstrate arithmetic competency, including mental math, in classroom and clinical settings, including emergency patient care situations.
4. Ability to prioritize multiple tasks, integrate information, and make decisions in a timely manner.
5. Ability to apply the principles, indications, and contraindications of sonography.
6. Ability to interpret sonographic findings in relation to imaging factors, image quality, and anatomical orientation.
7. Ability to conceptually visualize anatomy and pathology in three dimensions.
8. Ability to act safely and ethically in the classroom and clinical setting.

INTERVIEW

Applicants will be required to interview with a licensed agent in the Admissions Department and to meet with the Program Director prior to acceptance into the program. The Program Director's meeting is solely to introduce prospective students to the field of ultrasound and to ensure they understand the program's rigor. The Program Director's meeting does not affect a student's acceptance into the DMS program. CURE recommends that family members and/or significant others attend a tour and/or interview with the prospective student.

ACCEPTANCE AND ORIENTATION

Once an application meets all admission requirements and the enrollment documentation is complete, the school administration reviews and signs the file. The applicant is then notified of the admissions decision. If denied, the Business and Student Accounts Office will refund all tuition deposits. Please refer to the Tuition Refund Section of this catalog for more information.

CURE provides an orientation program before each program begins to help students adjust to the school environment. Policies, student responsibilities, and student questions are addressed during orientation.
Classes for CURE's program typically start each quarter in January, April, July, and October, with a maximum of 20 students per cohort. Additional start dates may be added at the Campus President's discretion if space permits. If a class is canceled due to low enrollment, all enrolled students will be notified in writing and offered placement in the next available start date. All paid deposits and fees for canceled classes will be refunded within 30 days.

25 TRANSFER CREDIT POLICY

CURE does not accept coursework or grades from other institutions for credit toward its certificate program. CURE's curriculum is measured in clock hours, not credit hours. A Certificate of Completion is awarded to students who meet the program's clock-hour requirements.

The Registrar will review transcripts from other institutions for informational purposes before enrollment. Any decision to grant college credit for CURE coursework after graduation is solely at the discretion of the college or university the student may subsequently attend.**23** CURE does not accept advanced placement credit or credit for prior experiential learning as a substitute for required program hours.

RIGHT TO RESCIND ADMISSION

CURE reserves the right to rescind admission in exceptional circumstances, whether occurring before the application is submitted, during the application review, or after the admission decision has been made, if the school finds that:

1. An applicant misrepresented or falsified any information in their application for any reason.
2. State authorization policies have changed.

REJECTED APPLICATION

An applicant denied admission may contact the appropriate Admissions Director to discuss the circumstances surrounding the rejection of the application. However, the Admissions Office cannot provide specific reasons for the rejection. All admissions decisions are final.

18 ENROLLMENT CANCELLATION

A student may cancel enrollment within seven (7) calendar days of signing the Enrollment Agreement. If cancellation occurs within this period, all monies paid will be refunded. Students may communicate their intent to cancel verbally or in writing via email or postal mail. When using postal mail, the communication must be postmarked no later than midnight on the seventh (7th) day following the date the Enrollment Agreement was signed.

A student who cancels more than seven (7) calendar days after signing the Enrollment Agreement, after making an initial payment but before classes begin, will receive a refund of all tuition deposits paid toward tuition charges.

Students who cancel within the seven (7) calendar-day cancellation period will not receive a refund of fees paid for toxicology testing or background checks if the testing has already been initiated, is in process, or has been completed by Quest Diagnostics (toxicology) or Castle Branch (background check). If processing has not been initiated for toxicology testing or the background check, those fees will be refunded. The registration fee is nonrefundable if cancellation occurs after the seventh (7th) day following the signing of the Enrollment Agreement.

Refunds for all eligible tuition and fees will be processed within thirty (30) days of the institution's receipt of the notice of cancellation.

18 TUITION REFUND POLICY

If a student enrolls in CURE's DMS program but does not begin classes, the student is entitled to a full refund of the tuition deposit. The refund will be issued within thirty days of the date the student notifies the institution that they will not be attending. Fees associated with the admissions process, including the registration, toxicology, and background check fees, are not refundable.

Exception: If the toxicology and background check fees have not been submitted for processing when the student communicates their intent not to start classes, those fees will be refunded in addition to the tuition deposit.
If a student withdraws or is dismissed and cannot complete their program, CURE will calculate the tuition refund according to the applicable refund schedules. The Business and Student Accounts Office will determine which fees, if any, are eligible for refund. Nonrefundable fees include the registration, background check, and toxicology fees. These fees will not be included in the tuition refund calculation.
Please note the following regarding program fees:

- Lab fees are charged only in Quarters 2 through 5.
- A second toxicology fee in the amount of forty dollars is charged prior to externship in Quarter 5.
- The CPR fee is charged in Quarter 5.
- The graduation fee is charged in Quarter X.

If a student withdraws during Quarter 5, all fees will be refunded as long as the intended use of the fee has not been initiated. For example, if a student withdraws after the toxicology fee has been processed by Quest Diagnostics, that fee will not be refundable.

A currently enrolled student wishing to officially withdraw should inform CURE in writing at least five calendar days, but no more than thirty calendar days, in advance of withdrawal. A student who returns to CURE after withdrawing must sign a new Enrollment Agreement and will be subject to the then-current price of tuition.

First Quarter Refund Schedule

Termination Occurs During	School Retains	Student Refunded
Prior to or During Week 1	0%	100%
During Week 2	25%	75%
During Week 3	50%	50%
During Week 4	75%	25%
After Week 4	100%	0%

Subsequent Quarters Refund Schedule

Termination Occurs During	School Retains	Student Refunded
During Week 1	25%	75%
During Week 2	50%	50%
During Week 3	75%	25%
After Week 3	100%	0%

Pursuant to Section 5002(3) of the New York Education Law, failure to notify the Campus President/School Director in writing of the intent to withdraw may delay a refund. The student refund may be greater than stated above for students who receive federal student financial aid if federal refund policy requirements result in a larger refund.

PROGRAM TERMINATION OR CANCELLATION

If classes are permanently canceled by the school, the student will be entitled to a refund of any tuition already paid for those classes.

FINANCIAL AID

CURE's Financial Aid Department is here to help you navigate your options and develop a funding plan. We know that paying for school can feel overwhelming, and our goal is to ensure you understand every resource available to you.

CURE is accredited by a nationally recognized accrediting commission and approved by the U.S. Department of Education to offer federal financial assistance (Title IV) programs to eligible students. CURE's Financial Aid Department helps students obtain the financial assistance they need to cover educational expenses. Available resources include federal grants and student loans. Federal assistance programs are administered by the U.S. Department of Education. Any U.S. citizen, national, or person in the United States for reasons other than temporary ones who is enrolled or accepted for enrollment may apply for these programs. Most forms of financial assistance are available for each July 1 – June 30 award period. Every student considering a financial aid application should request a copy of the current guide, Funding Your Education, published by the U.S. Department of Education. This important document may be obtained from the School's Financial Aid Office or online at www.studentaid.gov and will help people understand eligibility requirements, the application process, deadlines, and the various grant and loan options available.

Many students supplement Title IV assistance or cover their educational costs through other programs, such as Veterans benefits, agency sponsorship, employer reimbursement, or in-house financing.

Although not required, a student should apply for admission before scheduling a packaging appointment with the school's Financial Aid Department. In general, financial aid is awarded based on need. To help applicants complete their financing before classes begin, the school offers individual appointments with a Financial Aid Representative for each applicant to assist with form completion and answer any questions that may arise.

In general, an applicant may be eligible for federal Title IV assistance if the applicant:

- Is enrolled as a regular student in an eligible program.
- Has a valid Social Security Number
- Is a U.S. citizen or eligible non-citizen
- Is not in default on any Federal student loan
- Does not owe a repayment on any federal grant
- Possesses a high school diploma or its equivalent
- Continuing students must maintain satisfactory academic progress

The following federal aid programs are available to those students who qualify (subject to availability of funds):

1. Federal Pell Grant: This grant assists undergraduates who have not earned a bachelor's or professional degree with education expenses. It does NOT have to be repaid. The maximum Pell Grant for the 2025-2026 and 2026-2027 award years is $7,395. There is a lifetime eligibility limit for Pell Grants of 600% of the annual awards, or approximately six years of full-time enrollment.

2. Federal Direct Subsidized Stafford Loan: This is a low-interest, fixed-rate loan for students attending school at least half-time. The interest rate for loans disbursed on or after July 1, 2025, and before July 1, 2026, is 6.39%. It MUST be repaid. Interest does not accrue while students are attending school, during their grace period, or during periods of deferment. Funds are limited to 150% of the length of the program they are currently enrolled in. Once that limit is exceeded, an unsubsidized loan may be borrowed, and interest will accrue.

3. Federal Direct Unsubsidized Stafford Loan: This is a low-interest, fixed-rate loan for independent students enrolled at least half-time. The interest rate for loans disbursed on or after July 1, 2025, and before July 1, 2026, is 6.39%. It MUST be repaid. Interest will accrue on this loan while students are in school, during their grace period, and during periods of deferment; interest can be paid while the student is in school.

4. Federal Direct PLUS Loan: This is a low-interest, fixed-rate loan for parents who want to borrow to help pay for their child's education. The interest rate for loans disbursed on or after July 1, 2025, and before July 1, 2026, is 8.94%. This loan is available only to parents with no adverse credit history. It MUST be repaid.

FEDERAL STUDENT LOAN LIMITS

Annual Direct Loan Limits					
Year	**Independent and Dependent Subsidized & Unsubsidized Loan Base**	**Dependent Additional**	**Dependent Total**	**Independent Additional**	**Independent Total**
First Year (Freshman)	$3,500	$2,000	$5,500	$6,000	$9,500
Second Year (Sophomore)	$4,500	$2,000	$6,500	$6,000	$10,500
Third Year (Junior +)	$5,500	$2,000	$7,500	$7,000	$12,500

Aggregate Loan Limits – Federal Direct Student Loan			
	Combined Base Limit for Subsidized and Unsubsidized Loans	**Additional Limit for Unsubsidized Loans**	**Total Limit for Unsubsidized Loans (minus subsidized amounts)**
Dependent Undergraduate Students (whose parents were not denied a PLUS loan)	$23,000	$8,000	$31,000
Independent Undergraduate Students (and dependent students whose parents were denied a PLUS loan)	$23,000	$34,500	$57,500

OTHER SOURCES OF ASSISTANCE

There are other sources of financial assistance available to students looking for options to cover educational costs. Various agencies provide educational benefits for eligible students. The student will need to contact the agency directly for more information.

VOCATIONAL REHABILITATION (ACCESSVR)

Applicants wishing to attend CURE under Vocational Rehabilitation sponsorship should apply to the appropriate agency for these benefits. The Financial Aid Department will help prepare the application. The Agency will issue the student a certificate of approval, which should be submitted to the Financial Aid Department for official certification. The Business Office will bill the appropriate agency for the approved amount.

VETERANS BENEFITS/PENDING PAYMENT COMPLIANCE

CURE's DMS allied health certificate program is approved by the Bureau for Veterans Education to train veterans and other eligible persons. To apply for admission, veterans and active-duty personnel should follow regular admissions policies and contact the School Certifying Official in the Registrar's Office as early as possible to expedite VA form processing and coordinate benefits.

In accordance with Title 38 US Code 3679 subsection (e), CURE adopts the following additional provisions for any students using U.S. Department of Veterans Affairs (VA) Post 9/11 G.I. Bill® (Ch. 33) or Vocational Rehabilitation and Employment (Ch. 31) benefits, while payment to the institution is pending from the VA. This school will not prevent nor delay the student's enrollment; assess a late penalty fee to the student, require the student to secure alternative or additional funding, deny the student access to any resources available to other students who have satisfied their tuition and fee bills to the institution, including but not limited to access to classes, libraries, or other institutional facilities.

However, to qualify for this provision, such students may be required to produce the Certificate of Eligibility by the first day of class, submit a written request for certification, and provide any additional information needed to properly certify the enrollment, as described in other institutional policies.

If you served on Active Duty, you might be eligible for education benefits from the Department of Veterans Affairs. For example, the Post 9/11 GI Bill® provides financial support for educational and housing expenses to individuals with at least 90 days of aggregate service after September 10, 2001, or to those discharged with a service-connected disability after 30 days. To be eligible for the Post 9/11 GI Bill®, you must have received an honorable discharge.

If a student's spouse served in the military and was honorably discharged, or if the student is a service member's child, the student may be eligible to transfer the service member's Post 9/11 GI Bill® benefits.

FEDERAL AID APPLICATIONS

Students seeking federal Title IV financial assistance must complete the Free Application for Federal Student Aid (FAFSA). The FAFSA information is electronically transmitted to the U.S. Department of Education's Central Processing Service, and the school receives a processed Institutional Student Information Record (ISIR). The ISIR is used to determine Title IV eligibility. The Financial Assistance Office will retain the ISIR as documentation of the student's eligibility.

EXPECTED FAMILY CONTRIBUTION

The student's Expected Family Contribution is calculated by the federal Central Processor and is based on the information entered on the Free Application for Federal Student Aid (FAFSA). The Student Aid Index (SAI), formerly known as the Student Award Index (SAI), is included in the ISIR that is produced by the Central Processor when the student's application is processed. The SAI is a measure of how much the student and his or her family can be expected to contribute to the cost of the student's education during the academic year. This is measured by items including, but not limited to, household income and assets, household size, and the number of people in the household who are in college or a post-secondary institution.

VERIFICATION POLICY

A portion of FAFSAs submitted to the CPS are subject to a process called Verification. Verification means the applicant is asked to "verify" or confirm that the information on the application is correct. Verification requires the applicant and, if applicable, the spouse or parent to sign a Verification Worksheet and provide the required items selected for verification. The applicant may be required to obtain official copies of the prior year's federal tax returns for each year a FAFSA is submitted to the Financial Assistance office. If the applicant is married, the return(s) must include the spouse's information. If the applicant is dependent, copies of the parents' prior year's tax returns are also required. The Department of Education will also select applications at random to confirm identity, provide documentation for certain types of state assistance, and provide proof of graduation from a high school or GED. All financial aid disbursements are withheld until this process is completed.

FAILURE TO PROVIDE REQUIRED VERIFICATION DOCUMENTS

Students will receive no disbursement of expected federal funds if they fail to provide the information required for verification. All documentation must be provided to the Financial Aid Department (FAD) no later than 2 weeks (14 days) after notification of the verification requirement. Students who fail to provide the documentation to clear the verification requirement may be dismissed from school. In addition, they will be expected to make personal out-of-pocket payments in lieu of any expected financial aid disbursements to the school.

If the verification requirement is satisfied, the first disbursement of funds to which the student is entitled will be released. If the verification results are negative, the student will meet with the FAD to review inconsistencies and inaccuracies and to provide each student with appropriate guidance on resolving (if possible) issues preventing the verification from being satisfied. The student (and/or the family) will be required to correct inaccurate information by resubmitting the aid application (FAFSA Correction) for further processing. The FAD can assist all students with this process if needed.

If the School has reason to believe that any application has been intentionally submitted under false or fraudulent circumstances, such an application will be referred to the Department of Education Office of the Inspector General.

DEFINITION OF FINANCIAL NEED

Financial need is calculated to determine a student's eligibility for certain Title IV aid programs. It is the difference between the student's cost of attendance and the student's and/or family's financial resources. The cost of attendance needs formula can be stated as follows:

COST OF ATTENDANCE minus STUDENT AID INDEX minus OTHER ESTIMATED FINANCIAL ASSISTANCE = FINANCIAL NEED.

A student's financial need may not be fully covered by federal Title IV programs. Students are expected to pay any unfunded portion. A student's Cost of Attendance (COA) is used solely for aid eligibility determination, based on nationally approved living expense guidelines. The average cost of attendance includes allowances for room, board, personal, transportation, and miscellaneous expenses, plus one academic year's tuition and fees. Furthermore, financial aid typically does not cover the entire COA. Students and their families are expected to fund the difference. The Cost of Attendance should not be assumed to reflect all of a student's costs of attending school. The methodology for determining the school's COA is available from the Director of Financial Aid.

EMPLOYER SPONSORSHIP

Applicants currently employed should inquire about tuition reimbursement benefits offered by their employers. Most companies require employees to pay for their program and then reimburse them at certain points during the program or after completion of their program of study. Payments due to the school are not dependent on tuition reimbursement.

REQUIREMENTS FOR THE REVIEW OF A FINANCIAL AID APPLICANT'S FINANCIAL AID HISTORY

It is a federal requirement that the school determine all federal Title IV aid previously received by an applicant. The school uses the National Student Loan Data System (NSLDS) to obtain each applicant's financial aid history. The information is also available on the ISIR. Financial aid disbursements are withheld until confirmation of prior aid is received.

REQUIREMENTS FOR CITIZENSHIP VERIFICATION

When a student applies for federal Title IV financial assistance, the Central Processor conducts an electronic database match (using the student's Social Security number, name, and birth date) to determine the student's eligibility with the Social Security Administration and the United States Citizenship and Immigration Service (USCIS). The results of those matches are reported on the student's ISIR. If either match is unsuccessful, the student must resolve the discrepancy. The Financial Aid office will inform any applicant in this situation of the steps necessary to verify citizenship, which may include contacting the USCIS. Financial aid disbursements will not be made until citizenship status has been confirmed.

ACADEMIC YEAR DEFINITION

Title IV aid is disbursed by payment period each academic year, using the following definitions and calculations: An academic year is defined as 900 clock hours and at least 26 weeks. The payment period for the Allied Health Ultrasound DMS program is set at 450 hours.

DISBURSEMENT PROCEDURES FOR TITLE IV AID

Federal Direct Student Loans are disbursed as a credit to the student's account. For first-time borrowers, the first loan disbursement is made 30 days after the start of the program. For previous borrowers, loans disburse at the beginning of the term. The student's second and subsequent loan disbursements are scheduled for the beginning of each term in the academic year. When a student receives a Direct Loan credit, the student receives a notice advising the student or the parent (in the case of a parent PLUS loan) that the loan has been credited to the student's account and asking the student or parent whether they continue to want all or part of the loan.

Federal Pell Grant disbursements are credited directly to a student's account at the start of each term. Each recipient receives confirmation when a disbursement is credited to their account.

If a credit balance occurs on a student's account, the student or parent in the case of PLUS borrowers may request that the excess funds be retained by the school to pay for future tuition and fee charges, applied to other educationally related charges (i.e., books, supplies, equipment, etc.), or refunded to the Direct Loan Program to reduce the student's principal balance, all within the current academic year. Without a student's or parent's authorization, credit balances will be paid within 14 days to the student or to the parent in the case of PLUS Loans.

HOW STANDARDS OF ACADEMIC PROGRESS AFFECT STUDENT AID

To qualify for student aid under Title IV programs, a student must meet the standards of Satisfactory Academic Progress (SAP). To receive federal financial aid for attendance at the Center for Ultrasound Research and Education, students must make academic progress toward completing their certificate. Satisfactory progress for a clock-hour program is evaluated when the student successfully completes the scheduled clock hours for the period. Below are the detailed requirements that must be met, along with a description of the consequences if they are not met. This policy applies to all federal and state aid programs, including Pell Grants, Federal Direct Loans, and PLUS Loans.

If students are placed on Academic Probation or Financial Aid Warning, they remain eligible for financial aid disbursements during the warning period. If students fail to make satisfactory progress by the end of their warning period, they are suspended from financial aid eligibility, pending any additional appeals. Students who are suspended from financial aid eligibility may also be terminated from the school.

FEDERAL FINANCIAL AID COUNSELING

Entrance Counseling

The institution ensures that loan entrance counseling is conducted online at the Department of Education website: studentloans.gov, before a borrower takes out a loan. The interview includes:

- An explanation of the use of a Master Promissory Note (MPN)
- Importance of repayment obligation
- Description of consequences of default
- Sample repayment schedules
- Information in reference to a borrower's rights and responsibilities and
- Other terms and conditions

Exit Counseling

The institution ensures loan exit counseling is conducted at the financial aid office or via mail at completion of a program or withdrawal from the institution. The interview includes:

- An explanation of the use of a Master Promissory Note (MPN)
- Importance of repayment obligation
- Description of consequences of default
- Sample repayment schedules
- Information in reference to a borrower's rights and responsibilities and
- Other terms and conditions

RETURN OF TITLE IV AID

A recipient of federal Title IV financial aid who withdraws or is dismissed from school during a payment period or period of For the enrollment in which the student began attendance, the amount of federal financial aid the student did not earn will be calculated using a federal formula. This calculation will be based on the student's Last Date of Attendance (LDA), which is the withdrawal date. A student's last day of attendance is the last day of academically related activity, which may include projects, clinical experience, or examinations. If a student needs to withdraw from school, the student should advise the Campus Registrar and/or the Registrar. Written notice is preferable but not required. However, after 14 consecutive calendar days of absence without formal notification to the school, a student will be withdrawn from CURE.

Schools are required to determine the amount of federal financial assistance that must be returned based on the percentage of the payment period completed before withdrawing. For CURE's Allied Health clock-hour program, the amount of federal financial assistance earned is based on the number of hours attended up to the withdrawal date divided by the number of days in the program's payment period (excluding breaks of 5 days or more). Any balance of funds received by the institution that is not eligible to be retained is refunded to the Department of Education.

After a student has attended more than 60 percent of the payment period or period of enrollment, the student will have earned 100 percent of the aid awarded. Institutional charges, such as tuition and the registration fee, are counted toward the calculation. If the amount of unearned Title IV financial aid disbursed exceeds the amount returned by the school, the student (or parent, in the case of a Federal Parent PLUS loan) must return or repay, as appropriate, the remaining grant and loan funds. Loan funds are returned in accordance with the terms and conditions of the promissory note. If there are any grant funds to be returned by the student, the student is responsible for returning any overpayment that exceeds 50 percent of the amount of grant received. The student (or parent, if a Federal Parent PLUS loan) will be notified of the amount that must be returned or repaid, as appropriate.

If the student earned more federal financial aid funds than were received, the student (or parent, in the case of a PLUS loan) may be eligible to receive a post-withdrawal disbursement. If the student or parent is eligible to receive a post-withdrawal disbursement of loan funds, the institution will ask for the student's or parent's (as applicable) permission within 30 days of the date of determination to disburse some or all of the loan funds and will require a response within 14 days. The institution may automatically disburse the post-withdrawal disbursement of grant funds toward institutional charges or directly to the student. All returns of unearned Title IV funds will be made within forty-five (45) days of the school's date of determination of the student's withdrawal.

Post Withdrawal Disbursements

Occasionally, a student who withdraws from CURE is entitled to a post-withdrawal disbursement. A post-withdrawal disbursement occurs when the R2T4 calculation determines that a student is entitled to Financial Aid even though the student has completely withdrawn or stopped attending. If a student withdraws and is entitled to a post-withdrawal disbursement, a disbursement notice is mailed to the student informing them of the disbursement. It is the student's right and responsibility to notify CURE if they do not wish to receive the funds.

STUDENT FINANCIAL RIGHTS AND RESPONSIBILITIES

All students have the right to know:

- The school's accrediting and licensing agencies
- The school's programs, facilities, and faculty
- The cost of attending the school
- The financial assistance that is available
- How the financial aid office determines the student's financial need
- Each type of aid to be received and how it will be disbursed
- How to submit appeals under various school policies
- The school's method of determining satisfactory academic progress and how it affects the student's financial aid

eligibility
- Interest rates, repayment amounts, cancellation and deferment provisions for all loans borrowed by the student
- The criteria for continued eligibility for financial aid
- Student completion and retention rates, placement rates, and student body diversification.

All students have the following responsibilities:
- To review and consider all aspects of the school program before enrolling
- To complete financial aid applications accurately and truthfully
- To provide additional documentation, verification, correction, etc. as requested by the school or third party agency
- To read, understand and keep copies of all forms received
- To notify the school of any change in their financial circumstances
- To notify the school and the lender of a name or address change
- To understand the school's satisfactory academic progress policy
- To understand the school's refund policies
- To sign all required certification statements
- To repay all loans according to the promissory notes signed

STUDENT ACCOUNTS

The Student Accounts Office is dedicated to providing excellent, friendly, and timely service while ensuring all transactions are accurately processed and records are properly maintained.

The Student Accounts Office is responsible for:

- Student accounts receivables
- Tuition & Fee Billing
- Processing private scholarships
- Applying financial aid and other aid funds to students' accounts
- Processing and disbursing refunds
- Administering holds on student accounts (delinquent accounts)
- 1098T tax forms

TUITION CHARGES BOOKS AND SUPPLIES

Tuition is billed to a student's account at the beginning of quarters 1, 3, 5, and 7. Books and supplies for the DMS program at CURE are not included in the tuition charge. Upon enrollment in the program, the Admissions Department will provide all applicants with a list of required and suggested books for use during the program.

Payment Responsibilities and Agreement Notice

Enrolled students agree to comply with all policies and procedures related to their financial obligations to the school. Enrolled students assume liability for any debt incurred during their attendance at CURE. Students must notify the school in writing of any change in address or other contact information. All changes to the billing address must be provided immediately in writing, even after a student completes their program and has loans outstanding to the school. Failure to comply with the policies on address changes that result in the loss or delay of contact is the student's sole responsibility.
Payment to the school is always the responsibility of the student, regardless of the source of funding for tuition.

Payment of Tuition and Fees

Students may pay educational costs by cash, check, money order, or credit card. Tuition is due according to the terms of the student enrollment agreement and any supplemental payment plan agreed to during the financial aid interview. Students unable to make timely tuition payments must contact the Student Accounts Office to continue in their program of study. Unexcused late payments may result in suspension or dismissal from the institution.

Method of Financial Aid Payments

Financial aid disbursements for the Federal Pell Grant and/or Federal Direct Student Loan Payments will be credited directly to the student's tuition account once the Financial Aid Department requests eligible funds for each student who has met eligibility requirements, completed necessary applications, and verified aid applications. Federal Direct Loans, Federal Direct PLUS Loans, Federal Pell, and New York State TAP Grant will be disbursed to the student account, typically in two disbursements, each award year that the student is eligible to receive aid. Private loans will also be applied in accordance with the authorized enrollment periods.

Non-Payment Penalties

Accounts not paid in full may be referred to a collection agency, which can result in additional collection and/or legal fees. Indebtedness to the school may automatically terminate current enrollment and indefinitely suspend future enrollment. The school reserves the right to require prepayment before allowing registration for future terms. In addition, students with an outstanding obligation may be prevented from continuing in the program until all account balances are paid.

Insufficient Funds Policy

There is a $25 fee for any checks or credit card payments returned for insufficient funds or declined.

Monthly Payment Plan

If a student has a balance, there is an option to cover all balances in full prior to the first day of class. A student can opt to cover outstanding tuition shortfalls by requesting a 24-month interest-free payment plan with the school. The third tuition balance payment option is to pay tuition balances over a 36-month payment plan. If a student agrees to the extended payment agreement, a 5% fee is charged by the school and applied to the retail installment agreement, which is managed by TFC Credit Corporation, CURE's third-party vendor that manages collections for the account on the school's behalf.

In the event of continued non-payment, the payment plan may be canceled, and the balance then becomes due directly to the school, including any interest and fees, as applicable. Upon graduation or withdrawal from the institution, any outstanding past-due payments are referred to a debt collection agency as needed.

Refund and Liability Policies

If a student withdraws from a quarter (officially or unofficially), takes a leave of absence after the quarter begins, or is dismissed from CURE, the school may be required to return all or a portion of the federal funds awarded to the student. The student may be eligible for a refund of a portion of the tuition and fees paid, depending on the refund/liability schedule and the determined official withdrawal date. Students must contact the Registrar's Office to complete the withdrawal forms.

Adjustment of Federal Aid/Return of Title IV Federal Aid

When a student withdraws during a quarter, the amount of federal financial aid earned is determined on a pro-rata basis up to the point of 60% of the quarter. The amount of federal Title IV aid earned is based on the period of enrollment completed. The Financial Aid Department will complete a Return to Financial Aid (R2T4) calculation to determine what aid the school can retain to cover tuition costs and how much the school is required to return. A percentage is computed by dividing the number of days completed (as of the date the student officially withdraws) by the total number of days in the term. Scheduled breaks of more than four consecutive days are excluded. The percentage is then applied to the aid received to determine earned and unearned aid. If any aid is determined to be unearned, it must be returned to the appropriate financial aid program(s). Returns to aid programs must be made in the following order: Unsubsidized Federal Stafford Loan, Subsidized Federal Stafford Loan, Federal PLUS Loan, Federal Pell Grant, and NY State Grant. Once a student has completed more than 60% of the term, the student is considered to have earned 100% of aid, and no adjustment to aid is made.

Student Account Credit Balances

Refunds are subject to review by the Student Accounts Manager. Credit balances resulting from private scholarships, federal financial aid, and alternative loan programs are subject to specific guidelines and require approval by the Financial Aid Director. Students with credit balances resulting from excess financial aid funds, tuition cancellations, etc., will receive a refund check within 14 days of the date the credit appears on the student's account. Refund checks are generally mailed to the permanent home address on file unless we receive different written instruction from the student. Students may request to apply their credit balance to future quarter charges by completing the appropriate authorization form in the Financial Aid Office.

When a student's registration status changes and the student is a recipient of financial aid funds, the student's record must be reviewed by Financial Aid before a refund can be issued. Credit balances resulting from the disbursement of Parent (Plus) Loans will be refunded directly to the parent unless the parent submits written instructions to the Financial Aid Director authorizing the student to receive the funds.

1098T Tuition Form

IRS Form 1098-T is issued to most students who paid "qualified educational expenses" in the preceding calendar year. This form provides summary information on payments received for qualified tuition and fees, as well as on scholarships and grants. It is intended to help students and parents determine eligibility* for educational tax credits.

The 1098-T form is for informational purposes only. While you should retain a copy for your records, you are not required to submit it with your tax return.

IRS Form 1098-T will be available to eligible students and their proxies by January 31st of each year and will be emailed to the student. It is the student's responsibility to ensure their email address is up to date. Changes to an email address must be made in the Registrar's Office.

*Eligibility Information: Refer to IRS Publication 970 "Tax Benefits for Education" to determine if you are eligible for the education tax credits. Please note that the Office of Student Accounts cannot offer individual tax advice.

ACADEMIC INFORMATION

ACADEMIC GOVERNANCE POLICY

The Center for Ultrasound Research and Education is committed to having its faculty engaged in multiple levels of academic policy implementation.

Policy

Faculty shall have a clear responsibility and authority to participate in administering and implementing policy pertaining to academic affairs. Such responsibilities and authority are itemized below:

1. Regarding the role of faculty in development of the educational programs of the institution:
   a. Faculty members participate in program-specific Advisory Boards in which they periodically review the curriculum, program delivery and feedback from the community.
   b. Faculty members make recommendations to their program directors regarding improvements and enhancements following the completion of teaching assignments as well as throughout the term.

2. Regarding the role of faculty in the selection of course materials:
   a. Faculty members attend periodic meetings with the Program Director to examine new editions and offerings and offer suggestions and opinions on the best choices for new and/or existing courses.
   b. Faculty members review desk copies of texts and other materials sent by book vendors or ordered by DOE or Program Director and offer opinions/suggestions regarding these.
   c. Faculty members make recommendations or suggestions at faculty meetings regarding selection of course materials.
   d. Faculty members may request course materials from the Program Director or Campus Registrar.

3. Regarding the role of faculty in determining instructional equipment and other educational resources:
   a. Faculty members make recommendations or suggestions at faculty meetings regarding selection of instructional equipment and other educational resources.
   b. Faculty members may request instructional equipment and other educational resources from their Program Director or Campus Registrar.
   c. Regarding the role of faculty in the systematic evaluation and revision of the curriculum
   d. Faculty members may make suggestions regarding revision of the curriculum to the Program Director or Campus Registrar.
   e. Faculty members will be part of the Program Advisory Committee (PAC) where curriculum can be evaluated, reviewed and suggestions for revisions made.

4. Regarding the role of faculty in the assessment of student learning outcomes:
   a. Faculty members design and deliver formal summative assessments such as unit tests and final examinations.
   b. Faculty members design and deliver formative assessments such as quizzes.
   c. Faculty members design and deliver informal assessments, such as question-and-answer sessions to test students' knowledge and student role-playing sessions to assess students' communication and critical thinking skills.

5. Regarding the role of faculty in the planning for Institutional Effectiveness:
   a. Faculty members participate as members of the Institutional Effectiveness Plan (IEP) team.
   b. Faculty members review the data and make recommendations for improvement.
   c. Faculty members implement the improvements into their classroom delivery.

EDUCATIONAL DELIVERY

All lectures are delivered in a traditional classroom by qualified instructors, with the assistance of text and/or internet materials, internet access, and computer projection devices. Courses are taught using a combination of didactic and skills laboratory instruction. Labs are conducted in equipped laboratories under instructor supervision. Clinical and externship experiences are conducted at area healthcare facilities.

PROGRAM HOURS

The Allied Health Ultrasound Diagnostic Medical Sonography program consists of eight (8) quarters, each with approximately 300 clock hours. An academic year is defined as 900 clock hours and 36 weeks. Each clock hour in the program is defined as 50 minutes of instruction delivered for every 60 minutes of scheduled class time.

Maximum Students in a Typical Classroom

The number of students in a classroom or laboratory may vary based on programmatic requirements and approved classroom capacity. CURE's programs are currently approved to operate with a maximum of 20 students.

8 Academic Calendar

All closures on the CURE Academic Calendar are subject to change. If the campus is closed for any unforeseen reason (e.g., a snow day), those hours must be made up. Make-up days will be scheduled by the Campus Registrar, Program Director, and/or Registrar. Students will be notified in advance and are required to attend. This can occur on any day, Monday through Friday, 8 am to 5 pm, including any dates scheduled as days when the campus will be closed. A complete academic calendar is included in the back of this catalog. Please refer to the table of contents for the exact page. An addendum to this catalog.

General Holidays

MONTH	HOLIDAY OBSERVED
January	Dr. Martin Luther King Jr. Birthday
February	Presidents Day
April	Good Friday (No Classes)
May	Memorial Day (No Classes)
June	Juneteenth (No Classes)
July	Independence Day – Summer Break (M/W/F)
September	Labor Day (No Classes)
October	Columbus Day – (No Classes)
November	Thanksgiving Break (M/W/F)
December	Christmas Break (M/W/F)
January	New Year's Day (No Classes)

Attendance Policies

Daily classroom attendance is integral to student success not only in school but also in the workplace. Consistent attendance at CURE prepares students to meet the expectations of future employers in their chosen field of study. As part of the course requirements, students must attend at least ninety percent (90%) of the scheduled time for each course to achieve satisfactory attendance. Students in the clinical or externship portion of the Allied Health Ultrasound program are required to complete all scheduled hours and record attendance throughout the scheduled course. Students who do not meet minimum attendance requirements may receive a failing grade on their transcript and will be required to repeat the course.

Definitions of "Being in Attendance"

For all on-campus courses, "Being in Attendance" means being present in class when attendance is taken. Attendance is recorded in the attendance book every hour.

For all clinical, externship, and practicum courses, "Being in Attendance" means being present at the assigned clinical site according to the designated schedule. Attendance is tracked by the student's supervising sonographer and recorded daily in the student's clinical log.

Tardiness/Early Departure

Students are required to arrive on time, be prepared at the start of class, and remain for the entire duration of class. When a student arrives late to class, he/she misses important information, disrupts the delivery of critical instruction, and does not respect the learning needs of other students. Attendance is taken on an hourly basis on the days class is scheduled.

Students are considered late for class if they arrive after the scheduled start time. Faculty will record late arrivals and early departures based on the following guidelines: A student who arrives in class ten (10) or more minutes late, leaves a class ten or more minutes before the end of a period, or cuts classes (leaves and returns the same day) without proper notice will be marked absent (unexcused) for that instructional period.
Students are responsible for making arrangements with individual instructors for any and all make-up work missed as a result of being late to classes or leaving early.

Students who have been absent from all their scheduled classes for more than 14 consecutive calendar days, excluding scheduled school holidays or breaks, and/or students who officially withdraw from all current courses will be administratively withdrawn from the Institution.

Attendance is determined by course and quarter and is as follows:

1. Students who miss more than 10% of the course hours will receive an attendance warning.
2. To be considered for make-up hours, a student must provide the academic team, consisting of the Program Director and/or Registrar, with written justification for the absence(s). Upon receipt, the academic team will review the documentation and make a determination. The student will be notified of the administration's decision within three working days of receipt of the student's written justification. The maximum allowable make-up hours per course will be 20% of the course.
3. Students in the Diagnostic Medical Sonography program who exceed 40% absences of the instructional hours in an individual course will receive a grade of F and be required to repeat the entire course.

16 GRADING SYSTEM

Grades are compiled at the end of each quarter and made available to students at the Registrar's or the Campus Registrar's office. Grades are also posted in Google Classroom. Permanent records are maintained for each student, documenting grades, skills, and absences. Grades are based on classroom participation, skills laboratory proficiencies, project work, homework, written examinations, and attendance.

Students receiving a grade of "I" or "incomplete" in any course must complete additional work, as an "incomplete" cannot be used as a final grade. At the end of a course, a student's failure to complete required classwork, assignments, and/or tests due to extenuating circumstances may result in an incomplete grade. Students may, with appropriate approval, be granted a maximum extension of 14 calendar days (from the last scheduled class day) to complete any coursework. If the final grade is a failing grade (F), the course must be repeated in its entirety. It is the student's responsibility to fulfill this obligation within the two-week time frame; otherwise, the grade of "I" will be recorded as an "F" and included in the student's cumulative grade point average (CGPA). A grade of "I" has no impact on the student's CGPA, but it will be counted as hours attempted.

Courses receiving a grade of "F" must be repeated. The grade earned on the second attempt will be averaged into the student's CGPA and counted as hours earned and credit hours attempted.

Externship grading consists of evaluating the student's participation at a clinical site and scanning proficiency.

Theory courses award letter grades according to the following grading scale:

Grade	Percentage Range	Description	GPA	Passing?
A+	97.00 – 100	Excellent	4.00	Yes
A	93.00 – 96.99	Excellent	3.85	Yes
A-	90.00 – 92.99	Excellent	3.67	Yes
B+	87.00 – 89.99	Good	3.33	Yes
B	83.00 – 86.99	Good	3.00	Yes
B-	80.00 – 82.99	Good	2.67	Yes
C+	77.00 – 79.99	Satisfactory	2.33	Yes
C	73.00 – 76.99	Satisfactory	2.00	Yes
C-	70.00 – 72.99	Failure	1.67	No – Must Repeat
D+	67.00 – 69.99	Failure	1.33	No – Must Repeat
D	63.00 – 66.99	Failure	1.00	No – Must Repeat
D-	60.00 – 62.99	Failure	0.67	No – Must Repeat
F	Below 60	Failure	0.00	No – Must Repeat
W	—	Withdrawn	N/A	No effect on CGPA
I	—	Incomplete	N/A	Must resolve within 14 days
IP	—	In Progress	N/A	No effect on CGPA

REPEAT OF FAILED COURSES

Students are permitted to retake a failed course. DMS students must pass the theory and lab components of each course in the program. All courses in which a student fails to earn a passing grade must be repeated and successfully completed in accordance with course prerequisites to graduate. All courses from which a student has withdrawn must be repeated and successfully completed in accordance with course prerequisites to graduate.

Students who need to repeat a course must meet with the Campus Registrar and the Program Director to discuss scheduling. It is the student's responsibility to meet with a financial aid officer to determine whether any additional assistance is available to cover the tuition and fees for repeating a course.

A student who fails a course must repeat it at the next available opportunity, subject to space limitations. Likewise, a student who withdraws from a course must repeat it as soon as possible upon re-entry. Failing or withdrawing from a course, and the subsequent required repeat, may interrupt the student's enrollment, delay the student's expected graduation date, negatively impact financial aid eligibility, and/or affect the student's satisfactory academic progress status.

ABSENCE MAKE-UP WORK POLICY

Arrangements to make up assignments, projects, tests, and homework missed due to absences must be approved by the Campus Registrar. Students must submit proof of their absence from class to be approved to complete makeup hours. At the instructor's discretion, all make-up exams and assignments are subject to a 10-20% deduction from the student's overall grade at the end of the course.

Work missed as a result of absence (either individual class or full day) may be made up if:

- The absence was excused (student has documented proof for not being in attendance)
- The absence was for disciplinary reasons
- The absence was unexcused, but the student has mitigating circumstances that the Campus Registrar will review and document on a case-by-case basis.

1. Students should contact the Program Director before returning to school to get approval to make up missed time and to receive missed assignments from their instructor.

2. Students who know of an absence in advance should provide documentation (if possible) to the Registrar prior to the absence. The Program Director should also be informed.

3. Make-up hours must be completed immediately upon returning to school, and students are required to complete missing hours within the timeframe specified by the Campus Registrar. Students cannot complete make-up hours after a quarter is complete. All hours missed during a quarter must ideally be made up in that quarter for a student to continue to the next quarter without creating SAP issues. The Registrar and Program Director will provide the appropriate guidance for students approved to complete make-up hours.

4. Make-up hours are to be completed on days when regular classes are not in session, i.e., Tuesday and Thursday. It is therefore important that students who are employed on the days when regular classes are not in session, and who, because of economic reasons, cannot complete make-up hours, limit their time out of classes as much as possible each quarter.

Excuses for Religious Reasons

Students must submit a written request to the Campus Registrar and obtain approval before being absent from class.

Campus Closure/Snow Make-Up Days

The Campus Registrar will schedule appropriate make-up days for campus closures due to inclement weather. Emergency weather announcements are delivered via an automated phone/text/email system and posted on Google Classroom.

GRADE APPEAL POLICY

Students have the right to appeal decisions and policies made and enforced by the school. Appeals may be requested based on the following circumstances:

- Final grades
- Attendance
- Enforcement of school policies resulting in a change in status or disciplinary action.

An appealable grade is a final course grade that the student claims does not reflect what the student has earned under the grading criteria as outlined by the course instructor and indicated in the course syllabus. In all cases, the student may not appeal the faculty member's professional judgment, and the policy in the course syllabus shall prevail in determining the grade. Reasons that constitute an appeal of a final grade are as follows:

Final grade or Attendance Appeal:

- Students disputing a final grade or attendance must first meet with the instructor or email the instructor within five business days of the last scheduled class day.
- The student must provide evidence supporting the request.
- The instructor must review, make a determination, and meet with the student to communicate the decision within three business days.
- The student may appeal the instructor's decision and must email or turn in the hard copy of the appeal to the Campus Registrar and Program Director within three business days of the instructor's decision.
- The Campus Registrar and Program Director must review, make a determination, and meet with the student to communicate the decision within three business days.
- The decision of the Campus Registrar and Program Director is final.

Policy Enforcement Appeal

Students disputing a decision enforcing school policies that results in a status change or disciplinary action must appeal in writing within five business days of the decision and submit documentation to the Campus Registrar.

- An appeals panel will be convened within three business days of receipt of the appeal.
- An appeals panel will review, make a determination, and meet with the student within three business days.
- Prior to the appeal panel's final decision, students may choose to appear to present additional information.

Please note that appealing your grade triggers an investigation into a grade change. This may result in the student receiving a LOWER grade than the one originally assigned.

ACADEMIC ACHIEVEMENT

CURE recognizes academic excellence at the end of each quarter. Students are eligible if they have not exceeded attendance policy limits and have no grades below a "C":

President's List

At the end of each quarter, students who have achieved a 4.0 or better average, have no grades below a "C," and have not violated the stated school attendance policy will be placed on the President's List.

Academic Distinction List

At the end of each quarter, students who have achieved a 3.85 or higher average, have no grade below a "C," and have not violated the stated school attendance policy will be placed on the Academic Distinction List.

Honor Roll

At the end of each quarter, students who have achieved a 3.33 or better average, have no grades below a "C," and have not violated the stated school attendance policy will be placed on the Honor Roll List.

15 SATISFACTORY ACADEMIC PROGRESS (SAP)

Students at CURE must make satisfactory progress toward completing their certificate. Academic progress standards must also be met to continue qualifying for financial aid awards (see chart). Academic progress is measured both qualitatively by grade-point equivalent and quantitatively by the time required to complete the program of study.

Academic progress standards apply to all students, regardless of whether they are receiving financial aid. If, at any time during a student's program, the institution determines that the student is not satisfactorily meeting academic progress, the student will receive notification of this determination. If receiving financial aid, the student will also be notified of how not meeting SAP affects their funding. Policies governing probation and academic dismissal are strictly and uniformly enforced.

SAP Table for Diagnostic Medical Sonography

Standard	First Quarter	All Subsequent Quarters
Minimum CGPA	2.0	2.0
Hours Completed (hours earned / hours attempted)	90%	90%

Students must be at a 2.0 CGPA prior to attempting any externship courses.

SAP EVALUATION POINTS

For academic monitoring and to support students who may need assistance, academic progress is reviewed at the end of each quarter. However, there are mandatory SAP evaluation points at which a student must meet at least the minimum academic standards to remain enrolled as a regular student. SAP evaluations are also reviewed for financial aid purposes at each payment period during the student's academic year.

Effect of certain grades on Satisfactory Academic Progress

An incomplete grade ("I") is not included in the CGPA calculation but is counted in the successful course completion percentage as a course attempted but not successfully completed. Upon resolution of the incomplete grade, the student's academic progress will be re-evaluated.
Grades of "W" indicate that the student withdrew from the program entirely or was withdrawn from the course before its completion. These grades are not included in the CGPA calculation and are not counted toward the successful course completion percentage as courses attempted.

A failing grade of "F" will remain in the CGPA calculation until the course is repeated and a passing grade is earned. When a course is passed, only the passing grade will be used to determine the CGPA. However, both attempts are used in the calculation of the successful course completion percentage.

MINIMUM STANDARDS OF ACADEMIC PROGRESS: COURSE COMPLETION RATE

Minimum standards for successful course completion also apply during the program to ensure students complete it within the maximum time allowed. At a minimum, a student must successfully complete 90% of the clock hours attempted each quarter. Failing to do so will result in placement on Academic Warning and a warning from the Financial Aid Department. If the student does not meet the minimum standard in the subsequent quarter, the student will be placed on Academic Probation and on Financial Aid Warning for a second time. If a student does not meet SAP for a third consecutive quarter, the student will be academically dismissed from the program. The student will have 30 days to appeal the dismissal in writing (not via email) by presenting relevant and appropriate proof of why they were unable to meet the minimum academic requirements.

Within five (5) business days of receiving the student's appeal letter, the Academic Review Committee (ARC), consisting of the PD, Academic Compliance Manager, Registrar, Financial Aid Department representative, and Student Accounts, will review the circumstances presented by the student and meet with the student in a separate meeting to hear from the student in person. If the student is successful in their appeal of the dismissal, the DOE and PD will document a clear pathway that the student must follow to meet SAP in subsequent quarters. The student will be placed back in the program at the point at which they were terminated to begin repeating the failed courses.

Students who are recipients of financial aid and are dismissed for SAP purposes and re-enter the program following a successful appeal will return to complete courses without participating in the Federal Financial Aid programs until they regain eligibility by meeting the minimum SAP requirements. All such students will be required to pay for the quarters out of pocket until financial aid eligibility is restored.

MAXIMUM TIME ALLOWED TO COMPLETE PROGRAM

The maximum time allowed for students to complete their program is based on the total clock hours. Students are allowed 150% of the published time (total clock hours) to complete their program. The Maximum Time Frame (MTF) for CURE's Allied Health Ultrasound program is calculated as follows:

Total number of hours in the program: 2,400 X 150% = 3,600 hours.

A student must complete CURE's 2,400 clock-hour program within 3,600 clock hours. An evaluation will be conducted upon a student's successful completion of the clock hours in the payment period. If it becomes apparent that the student cannot complete the program within the maximum time frame, the student will not be allowed to continue, regardless of whether or not they are receiving financial aid.

FINANCIAL AID SATISFACTORY ACADEMIC PROGRESS POLICY

As part of Federal law and regulations, the Center for Ultrasound Research and Education (CURE) requires that all students receiving financial aid maintain Satisfactory Academic Progress (SAP) according to both qualitative and quantitative measures established by the school and following Federal guidelines. The following policy represents the standards adopted by the school and the Financial Aid Department. In order for students enrolled at the school to receive financial aid, they must meet qualitative and quantitative SAP requirements towards CURE's certificate Diagnostic Medical Sonography program.

1. Policies & Definitions

a. **Measure:** The qualitative measure is determined through a student's ability to demonstrate competency in the course or subject matter. Program or course syllabi provide students with information on the predefined measures used to determine successful completion of the course per the school's Student Grading and Performance Policy. Students must maintain a grade of "C" or better in each course to be considered meeting the financial aid progress standard.

b. **Quantitative Measure:** Each competency is assigned progress hours based on the average time a student would expect to complete a course. Progress hours are then measured as a ratio of enrolled hours to determine how many hours a student actually spent completing the course. Students must be on pace to complete the program within 150% of the program's hours. Progress is monitored at the end of each payment period.

c. **Maximum Time Frame:** Students are expected to complete their certificate within the scheduled time frame of the program. However, the maximum time frame for program completion for Financial Aid students is 1-1/2 times the overall program length (otherwise known as time and a half). For example, if a program is 900 hours, the student may be allowed to take up to 1,350 hours to complete it. In this example, the student does not receive additional funding for the extra 450 hours. If a student cannot complete within the time and a half allotment, they will be dropped from the program and will lose Financial Aid eligibility

   i. Repeated Courses: Students are expected to pass all courses within a certificate program. It is the student's responsibility to pay all charges for repeated courses.

2. Financial Aid Warning

Students who do not achieve satisfactory academic progress as defined by this policy are immediately placed on Financial Aid Warning but are still eligible to receive financial aid for the next payment period. Students under Financial Aid Warning are required to meet with the Vice President of Student Affairs, the Program Instructor, and the Financial Aid Manager to develop an academic plan. A copy of the signed plan will be electronically filed in the student's financial aid record.

3. Suspension

Students who are in a financial aid warning status and do not make satisfactory academic progress towards their academic plan will be placed on financial aid suspension. Students on financial aid suspension are not eligible for financial aid in their next payment period. Students placed on suspension are notified via letter. Students may continue enrollment without financial aid until they meet the requirements of this policy. It is the student's responsibility to pay all charges incurred during financial aid suspension.

a. **Maximum Time Frame:** Students who reach their 150% program hour length will no longer be eligible for financial aid. Students are allowed to continue enrollment without the benefit of financial aid. It is the student's responsibility to pay all charges incurred during financial aid suspension.

b. **Inability to Meet Program Requirements within Maximum Time Frame:** If determined by the financial aid office that a student cannot possibly meet the qualitative and quantitative requirements of the program within the maximum time frame, they will no longer be eligible for financial aid. Students are allowed to continue enrollment without the benefit of financial aid. It is the student's responsibility to pay all charges incurred during financial aid suspension.

c. **Disbursement of Financial Aid Funds for Students in a Warning Status:** Students who are in warning status are to receive their financial aid disbursement within the normal disbursement period, which is within 14 days. If the student has signed the Authorization to Retain a Federal Student Aid Credit Balance form, the credit balance will remain in the student's account until the next payment period.

4. Appeal Process

A student who is placed on financial aid suspension has the right to submit an appeal to the Financial Aid Director. Financial Aid appeals may be submitted for mitigating conditions such as the death of a relative, an injury or illness of the student, or other special circumstances. The form, along with any supporting documentation, is forwarded to the Financial Aid Director. The Financial Aid Director, Student Accounts Manager, and an academic representative make up the appeal review committee. Students are notified of the committee's decision by mail. The committee's decision is final.

5. Re-entry upon Acceptance of an Appeal

Students who re-enter based on an accepted appeal are awarded financial aid for their next payment period of enrollment, placed on financial aid probation for that payment period, and required to meet with the Program Director and the Manager of Academic Integrity to develop an academic plan. A copy of the signed plan will be filed in the student's financial aid record.

FINANCIAL AID NOTIFICATION: STUDENT NOT MEETING SAP

CURE follows Federal Regulations (CFR 668(f) and 668,34), which require students to move towards the completion of their certificate of completion, within an eligible program when receiving financial aid. Students have been made aware of the importance of meeting all minimum standards while pursuing their educational goals with financial aid support. If the minimum standards are not met, students are made aware that this may result in the loss of Title IV HEA program (federal financial aid) eligibility.

Repeat Policy

Federal regulations also limit Federal Student Aid funds to one additional attempt after a grade of "D" or better has been obtained. Therefore, students will be eligible for up to two attempts, maximum, for a particular course for which they previously earned a failing grade. A grade of "W" (withdrawal) would not count as an attempt, but it will count towards the student's Satisfactory Academic Progress (SAP).

First Appeal of Financial Aid Suspension

Please note that being permitted to continue your studies does not automatically reinstate your Financial Aid eligibility. Students who fail to meet the SAP requirements may apply for a one-time waiver to re-establish eligibility for Federal aid for one quarter only. At the end of the probationary term, the SAP status and eligibility for federal aid will be re-evaluated.

To qualify for this one-time only waiver, the student must submit the following forms:

1. Submit a signed SAP Probation Form.
2. The student must write a letter that describes the reasons for the failure to maintain Satisfactory Academic Progress.

Failure to submit the forms will result in the suspension of the student's financial aid.

Subsequent Appeal(s) of Financial Aid suspension

A student whose aid has been suspended due to a failure to meet the Satisfactory Academic Progress requirements, after having previously received a waiver, may appeal the denial on the basis of circumstances beyond his or her control.

The appeal must be made in writing and must adhere to the following requirements:

1. An appeals form must be completed.
2. The student must write a letter that describes the reasons for the failure to maintain Satisfactory Academic Progress.
3. The student must provide documentation supporting the reasons for the appeal (e.g., a doctor's statement regarding medical reasons).

The appeal must be addressed to the Financial Aid Director within 48 hours after being notified of failing to meet SAP. The Financial Aid Director will review the appeal with the Program Director, Registrar, Manager of Academic Compliance, and the Student Accounts departments and will send a written decision to the student no later than 1 week after receiving the appeal.

REINSTATEMENT OF FINANCIAL AID

If a student's SAP appeal is approved, the student will be placed on financial aid probation until the end of the quarter in which they are attempting to meet the minimum SAP requirements, at which point their SAP status will be reviewed. Other forms of aid, such as State aid, VA Benefits, or other types of aid, may be reviewed to determine if eligibility remains.

Responsibility For Assignments

Students are responsible for making up all missed assignments, tests, quizzes, notes, etc. upon their return to school in accordance with faculty members' course policies.

Leave of Absence (LOA) Policy

Students may request a Leave of Absence (LOA) if they are in good academic standing and have met all financial obligations to CURE before a leave is granted. The student must request an LOA in writing, state the nature of the LOA, and provide documentation before the request can be approved by the Campus Registrar.

A leave of absence (LOA) may be granted in extenuating circumstances that require students to interrupt their education. Examples of extenuating circumstances that may qualify a student for LOA include:

- military duty;
- serious injury or illness of a student that prevents the student from attending school;
- serious injury or illness of a family member that prevents the student from attending school;
- death in the immediate family;
- maternity;
- jury duty; or
- extenuating circumstances as approved by the school's President.

Once the LOA is approved, the Registrar will complete a Change of Status Form indicating the date the student's Leave of Absence began or the last date of recorded attendance, the reason for the LOA, and the anticipated date the student is scheduled to return from the LOA.

A student may take a LOA for up to 180 days in a 12-month period for reasons including extended jury duty, medical, and military issues. Students going on an approved LOA in the middle of a course within a quarter must return to school at the same

point in the program that the student left – in the same quarter and the same course- to return. A Leave of Absence granted after a quarter or course within a quarter has been completed must wait until the following quarter or the next available course the student withdrew from, whichever comes first, to return to school.

Effect of Leave of Absence on Student Financial Aid

A Leave of Absence (LOA) is not considered an official leave of absence under federal Title IV regulations. When a student takes a LOA, the student will be considered ineligible for Title IV purposes. As a result, a return to Title IV calculation will be done, and the student will be reported to his or her lender as less than half-time enrolled. The time on a LOA will be counted against the six-month grace period for entering repayment on the federal financial aid loans. The student will enter repayment if they do not return from leave within six months. Please note that this is not applicable to military students.

While on a Leave of Absence, the student will not be eligible to receive student services. However, any payment arrangement due to the school will continue while on an approved LOA. If the student is absent and does not complete a Leave of Absence Form and/or submits a written LOA request to the school, the student may be terminated and will be held financially liable under the terms of the refund policy. An approved leave of absence taken for an entire quarter has no effect on the maximum time frame relative to satisfactory academic progress. If a student does not return as indicated on the approved LOA documentation, then the student will be automatically withdrawn from the school. Should the student decide to re-enroll at a later date, the student will need to follow the readmission procedures outlined in the catalog and will need to meet with the Program Director, Registrar, and Manager of Academic Integrity, as well as be approved for re-entry into the program by the following departments: Financial Aid and Student Accounts.

TERMINATION POLICY

A student is subject to termination for violating any of the following:

- Failure to maintain satisfactory academic progress
- Failure to comply with the school's attendance policy
- Failure to comply with the school's conduct policy
- Failure to meet financial obligations to the school
- Failure to fully comply with program or externship requirements
- Repeated failure of the same course more than twice
- Violation of any of the conditions set forth and agreed to in the Enrollment Agreement
- Students are expected to complete their program within 150 percent of the published length of the program (or 1.5 times the number of hours in their program). ROP calculations help assure that students will complete their programs within the maximum time frame.

WITHDRAWAL FROM CURE

Students may withdraw from the school by completing a withdrawal form from the Registrar's Office. Merely ceasing to attend classes does not constitute an official withdrawal, academically or financially. Failure to file a withdrawal form with the Registrar's Office will result in the automatic recording of "F" grades for all courses being taken by the student. Official date of withdrawal is the last date of class attendance as verified by an instructor. This date will be used in determining any refund.

Once withdrawal documentation is received by the Registrar's Office in writing or it is determined the student will no longer be attending classes, the Registrar will forward the official paperwork to the Financial Aid Department to complete the Return To Title IV refund calculation (R2T4) required for all students received federal financial aid and to the Bursar/Student Accounts Office to adjust the student account ledger based on the results of the R2T4 calculation and institutional refund calculation.

WITHDRAWAL PROCESS

Students who wish to withdraw from the CURE should contact the Campus Registrar or Program Director and are strongly encouraged to meet with the Financial Aid Office. Regardless of the circumstances of withdrawal or the date of notification to the school, the official withdrawal date is the last date of class attendance. Written notice is preferable but not required. However, upon 14 consecutive calendar days of absence without formal notification to the school, a student will be administratively withdrawn from CURE. An administrative withdrawal will result in a non-punitive grade of "W". Students do not receive grade points for Withdraw (W) grades, but a notation appears on the transcript.

Students may appeal the withdrawal if extraordinary circumstances prevented them from attending the course they were enrolled in. Extraordinary circumstances are narrowly defined to mean the development of unforeseen, unexpected circumstances beyond a student's control. Examples of extraordinary circumstances include serious illness, death in the immediate family, significant change in the location and/or conditions of employment, or an unexpected call to active military duty. Mere inconvenience and/or discomfort with the academic workload, minor schedule changes in employment, connectivity issues, etc., do not meet the definition of extraordinary circumstances.

An appeal of an Administrative Withdrawal for Non-Attendance form should be submitted by the student to the Campus Registrar, the Program Director, or the Campus Registrar. The documentation submitted by the student will be reviewed and submitted to the Academic Review Committee for consideration for reinstatement. The Committee has the final authority to

approve an appeal. The likelihood of passing the course(s) if re-enrolled in the course(s) will be considered in the review of the appeal.

In all cases, the date of withdrawal is the date the student notifies the campus of their intent to withdraw from the program or the date the school determines the student is not returning to school. Withdrawal from class does not reduce account charges. Withdrawal from a class may affect financial aid and/or billing charges, especially for students who have received federal Title IV aid in the form of grants or student loans.

READMISSION FOR RETURNING STUDENTS

Students who withdraw in good standing may formally request re-admittance to their program by writing a letter to the Registrar or Program Director requesting reinstatement. The request should include the reasons for being a good candidate for re-admittance.

Generally, a student will not be considered for readmission more than two times unless there are exceptional extenuating circumstances, such as military deployment. The applicant for readmission must satisfactorily demonstrate that the barriers that prevented them from successfully completing their program during the previous enrollment have been resolved, and that there is a reasonable probability that they can complete the program of study.

A former student seeking readmission must apply for readmission by submitting an Application for Readmission to the Campus Registrar (DOE). The applicant must meet with the DOE to discuss and document the circumstances that led to the prior withdrawal and what he or she has done to ensure that these or other issues will not interrupt the completion of the program if he or she is approved for readmission. Students seeking readmission must have satisfied all prior outstanding balances owed before an Application for Readmission will be considered. The Registrar and Program Director will determine which previously taken courses will count toward program completion and which need to be repeated. Prior to approval for readmission, the applicant must meet with the Financial Aid Director (or his or her designee) and complete all necessary applications and documents to ensure that his or her past and future tuition and fee obligations are satisfied in a timely manner. Applications are reviewed and approved by a committee comprised of the school's Campus President, Program Director, Registrar, and Financial Aid Director, or their designees.

In some cases, students wishing to re-enter may be required to appeal for readmission. This appeal must be approved by an appeals committee comprised of faculty and/or staff as deemed appropriate by the institution. Re-entering students may be required to complete competency testing to determine their ability level before being approved for re-entry. Students may be required to repeat previous courses for which they received a failing or "W" grade. These repeated courses may not be eligible for Title IV funding. All current and prior coursework will be counted towards the program's maximum timeframe. The ability to re-enter the school is subject to seat availability.

Approval of an applicant for readmission is subject to space availability and to the applicant meeting all current admissions requirements for the program. The registration fee is waived for all students who re-enroll within 1 year of leaving the school. All re-entering students must complete a new Enrollment Agreement and are charged the rate of tuition and fees in effect at the time of re-entry. Students who desire to re-enter the program after a previous academic dismissal, whose attempt at academic coursework at CURE has not or will not in the future exceed maximum timeframe guidelines (1.5 times the program length before the expected completion of required hours), are eligible to apply for re-entry at the start of a new course that is being offered and required for them to complete the program. All students seeking re-entry will need to wait until there is sufficient space in the class to repeat or take coursework. Approval of a re-entry student is contingent on course availability and is not guaranteed. Students are only permitted to re-enter the program at the point at which they left.

A student dismissed for failure to meet Satisfactory Academic Progress (SAP) requirements may apply for re-admission if there is a reasonable probability that he or she can achieve the grades necessary to raise the Cumulative Grade Point Average (CGPA) and can increase his or her GPA within the specified timeframe needed to meet the school's SAP policy. If approved for re-admission, the student will re-enter the school on Academic Probation. In addition, a student readmitted on Academic Probation to regain SAP status is not eligible for any federal grant or loan funding until he or she corrects the condition that caused the loss of SAP standing (See SAP policy for specific requirements). If a readmitted student does not qualify for financial aid, he or she is responsible for the payment of all new tuition and fees from his or her own resources until such time as the student may prequalify for student financial assistance.

Students who are re-admitted to class after being separated from the school for 6 months or more may be required to complete a health examination, background check, and/or drug screening.

Re-Admission Process:

- Students who drop voluntarily and who wish to re-enter may initiate the process with the Registrar, who will coordinate the re-entry process for the student.
- Financial Aid Office will review and approve/deny the re-entry to ensure that any financial aid issues are resolved.
- The Business Office will review and approve/deny, confirming that any payment plans are current or need revision.

- The Registrar or Program Director will review and approve the re-entry
- The student has no conduct or behavioral issues that will impede campus operations, security, or externship placement.
- There is seat availability to accommodate the students' re-entry into the next course.
- The student participates in academic advisement with the Program Director if there are issues with grades or attendance.

PROGRAM INFORMATION

DIAGNOSTIC MEDICAL SONOGRAPHY, VASCULAR TECHNOLOGY, ECHOCARDIOGRAPHY

12b. PROGRAM SCHEDULE

Lecture Hours: 700
Lab Hours: 800
Clinical Hours: 900

Total Hours: 2400
Duration: 24 Months/104 Weeks/24 Hrs per Wk.
Method of Delivery: Residential 12d

Upon successful completion of the program, the student will be awarded a Certificate in Diagnostic Medical Sonography. Required Minimum Overall Grade Point Average is 2.0.

PROGRAM DESCRIPTION AND OBJECTIVES

Program Delivery 12d

CURE courses are delivered on-site and are not offered online at this time.

Program Description

The Diagnostic Medical Sonography, Vascular Technology, and Echocardiography program is designed to develop the principles, techniques, knowledge, and skills each student needs to function as a qualified Diagnostic Medical Sonographer, Echocardiographer, and/or Vascular Technologist with experience in the everyday practice and application of ultrasound. It introduces the diagnostic foundations of general, vascular & cardiac ultrasound, including terminology, abbreviations, scan plane orientations, directional nomenclature, physical principles, anatomical relationships, normal sectional anatomy in the transverse, longitudinal, coronal, and oblique planes, with correlated Sonographic images and physiology. Emphasis will be placed on the clinical applications of general, vascular, and cardiac Sonography, including basic patient care principles, professionalism, related clinical signs and symptoms, interpretation of normal and abnormal Sonographic patterns, pathology, normal variants, clinical laboratory tests and values, and sessions on basic scanning techniques and protocols. The academic, laboratory and clinical courses are integrated into the program for students to practice and perfect scanning skills pertaining to Diagnostic Medical Sonography, Echocardiography and Vascular Technology. The student will possess the knowledge and skills necessary for employment in the healthcare system and will be technically capable of performing entry-level general, cardiac, and vascular exams as competent allied health practitioners.

12a Program Objectives

CURE seeks to provide certificates of completion to graduates upon successful completion of the CURE Diagnostic Medical Sonography, Vascular Technology & Echocardiography programs, including on-site, residential classes, learning experiences, and clinical externships, to prepare students for an entry-level career in general, cardiac, and vascular ultrasound.

CURE Objective Inclusions

- To provide specialized ultrasound education designed to prepare students for entering a career as a Diagnostic Medical Sonographer, Echocardiographer, and/or Vascular Technologist.
- To prepare graduates to pass Credentialing Exams. (ARDMS, CCI, and ARRT examinations are also taken into consideration)
- To motivate and inspire students to pursue academic excellence in general, cardiac & vascular Sonography.
- To provide courses with hands-on training for accurate and efficient ultrasound diagnosis.
- To encourage students to think critically, problem-solve, and communicate effectively.
- To emphasize the need for general, vascular & cardiac sonographers to engage in professional development.
- To provide high-quality educational programs.
- To encourage students to execute exceptional and compassionate patient care.
- To create an atmosphere for students to participate in ultrasound-related research projects.
- To encourage students to participate in ultrasound competitions and medical publications.

CURE Training Inclusions

- Record, analyze, and process diagnostic ultrasound data.
- Demonstrate effective communication skills with patients and colleagues.
- Act in a professional and ethical manner.
- Perform examinations upon the order of, or for, diagnostic interpretation by a physician.
- Provide a preliminary summary of findings to the physician to aid in patient diagnosis.
- Apply knowledge of anatomy, physiology, positioning, and Sonographic techniques.
- Achieve optimum Sonographic patient images in the most efficient manner.
- Provide constant care and comfort to all patients.
- Know the safe limits of ultrasound equipment operations.

Overall Course Objectives

At the completion of this course, the student should be able to identify and describe the following as it pertains to their study of Sonography.

- Understand, define, and use pertinent and accurate abbreviations and terminology as it pertains to the study of Sonography, which will include but not be limited to standard body planes, directional nomenclature, anatomy, NAVs, cross-sectional anatomy, physiology, pathology, pathophysiology, ultrasound physics, lab values, associated procedures, patient care, scanning techniques, and pitfalls.
- Identify on illustrations and Sonographic images the major body planes, including longitudinal, transverse, coronal, and oblique, and explain the scan plane orientation and anatomic relationships in directional terms.
- Identify on longitudinal and transverse illustrations and Sonographic images the major anatomic structures, including all segments, ducts, major venous and arterial systems, and other pertinent and/or adjacent structures.
- Understand and list the basic functions/physiology and associated vasculature.
- Understand, describe, and demonstrate the basic scanning protocols as defined by national professional organizations, and understand the basics in theory and practical application of 2-D imaging as it pertains to ultrasound.
- Understand and use the physical principles of ultrasound as they directly pertain to Sonography, both in their didactic and hands-on scanning.
- Apply the patient's prep, position, communication, patient education, evaluation, and professionalism to facilitate the optimal Sonographic exam.
- Identify and label the normal Sonographic pattern and appearance of vasculature and associated structures.
- List and describe the clinical criteria and typical indications for Sonographic exams.
- Identify the basic subsections of the patient's medical chart and describe the type of clinical information found in each section as it pertains to performing an optimal evaluation by ultrasound.
- Understand and describe the clinical laboratory tests used for evaluating function.
- Understand and describe the clinical symptoms and pathologic basis for disease processes.
- Identify and evaluate sectional Sonographic images, the disease processes of the patient, based on history, the patient's clinical picture, and the results of other related diagnostic procedures.
- Recognize and remedy the technical pitfalls associated with Sonography.
- Review and discuss related case studies, abstracts, and research articles in accordance with the study of Sonography.

CLINICAL OBJECTIVES/TECHNICAL STANDARDS

- The student should be able to understand, identify, describe, examine, and apply the clinical applications integrated within Sonography as it applies to their study of patient care, scanning techniques, and protocol at their developing skill level. This will be accomplished through scanning laboratory sessions using various techniques, such as role-playing, scanning exercises, clinical rotations, and practicum testing.
- The student will understand and use pertinent and accurate abbreviations and terminology as it pertains to scanning protocol, which will include, but not be limited to, patient prep and patient care, equipment care and maintenance, physical principles (including 2-D, spectral and color flow Doppler principals and application), anatomy, physiology, pathology, pathophysiology, patient's History and Physical Examination (H&P) and clinical picture, normal and abnormal Sonographic patterns, NAVs, laboratory tests and related procedures, scanning protocol, techniques, labeling, communication and interpretation.
- The student will understand and apply physical principles that apply to obtaining optimal image quality in 2-D real-time, Doppler (both spectral and color flow), and static images as it pertains to their study of Sonography.
- The student will understand and apply principles in the care and maintenance of all ultrasound equipment in all instances, including at CURE, the clinical setting, and in compromising circumstances such as the emergency room, intensive care units, the OR, the newborn and neonatal intensive care nursery, infection control situations, and isolation procedures while learning and performing a Sonographic examination.
- The student will be able to effectively interact with students, instructors, patients, physicians and all other health care professionals of all ages, cultural backgrounds and levels of emotional, mental, and physical health while learning and performing diagnostic imaging techniques.
- The student will have the ability to always conduct themselves as a medical professional and in a professional manner, not only in scan lab sessions at CURE, but especially in the clinical setting while learning and performing a Sonographic examination.
- The student will be able to explain the procedure and prepare the patient physically, mentally and emotionally for the Sonographic exam as well as provide patient education on the diagnostic use of medical ultrasound specific to their exam, elicit cooperation from the patient to enhance imaging quality, provide safety and comfort measures for the patient during the exam, "their role" in obtaining diagnostic images for that patient and reporting that information to the reading physician.

- The student will be able to effectively apply aseptic, bacteriostatic, and sterile techniques in the care of the patient, themselves, others, and the equipment while learning and performing Sonographic exams.
- The student will understand and apply appropriate principles of body mechanics, ergonomics, and safety measures in the care and prevention of injury to the patient, themselves, and others while learning and performing Sonographic exams.
- The student will be familiar with and be able to work around all medical equipment that may accompany or be in use for a patient and their role concerning that equipment, which will include, but not be limited to, IVs, O2, Foley catheters, chest tubes, A-lines, NG tubes, telemetry, ventilators, etc., while learning and performing Sonographic exams.
- The student will be able to recognize the signs and symptoms of a medical emergency, respond and act accordingly on the patient's behalf, and assume their role in that situation based on the law and specific protocol of that medical institution while learning and performing Sonographic examinations.
- The student will understand and apply all physical and instrumentation principles as it applies to obtaining optimal images, which will include, but not be limited to, biologic effect, body habitus, image artifacts, quality control, system gain adjustments, focal zone, depth, transducer selection, as well as Doppler principles and application while learning and performing a Sonographic examination.
- The student will understand the importance of and be able to obtain necessary and pertinent information from the patient's chart in order to know the reason for the exam or what the ordering physician is "ruling out", the area of interest.
- The concentration a sonographer is to focus on, and to apply all diagnostics and testing information and results to obtain an optimal exam and to provide a clear and thorough preliminary interpretation for the physician.
- The student will be able to recognize, identify, distinguish, obtain, and label all normal and abnormal anatomy, associated vasculature, ligamentous structures, benign and pathologic entities, and related structures according to the designated ultrasound protocol while learning and performing a sonogram examination.
- The student will recognize, distinguish, and interpret normal and abnormal Sonographic patterns, related clinical signs and symptoms, NAVs, benign entities, and pathology in obtaining images according to the designated ultrasound protocol while learning and performing a Sonographic examination.
- The student will perform and record normal, abnormal, and pathologic data in the form of routine optimal images, routine and appropriate measurements, and applied spectral and color Doppler analysis according to the designated protocol suitable for interpretation by a reading physician to formulate a diagnosis while learning and performing a Sonographic examination.
- The student will understand and assess the principles associated with suboptimal imaging, evaluate under what circumstances these principles and results occur, and the methods in which to remedy these pitfalls associated with it, while learning and performing a Sonographic examination.
- The student will prepare clear, precise, thorough, and objective preliminary interpretations as it applies to their study and evaluation of the Sonographic examination.
- The student will be able to recognize, identify, distinguish, obtain, and label all normal and abnormal anatomy, associated vasculature, ligamentous structures, benign and pathologic entities, and related structures according to the designated ultrasound protocol while learning and performing a sonogram examination.
- The student will recognize, distinguish, and interpret normal and abnormal Sonographic patterns, related clinical signs and symptoms, NAVs, benign entities, and pathology in obtaining images according to the designated ultrasound protocol while learning and performing a Sonographic examination.
- The student will perform and record normal, abnormal, and pathologic data in the form of routine optimal images, routine and appropriate measurements, and applied spectral and color Doppler analysis according to the designated protocol suitable for interpretation by a reading physician to formulate a diagnosis while learning and performing a Sonographic examination.
- The student will understand and assess the principles associated with suboptimal imaging, evaluate under what circumstances these principles and results occur, and the methods in which to remedy these pitfalls associated with it, while learning and performing a Sonographic examination.
- The student will prepare clear, precise, thorough, and objective preliminary interpretations as it applies to their study and evaluation of the Sonographic examination.

ALLIED HEALTH PROGRAM POLICIES

The Center for Ultrasound Research and Education (CURE) is committed to high-quality education and providing excellent clinical experiences for all students in our Allied Health Diagnostic Medical Sonography, Vascular Technology, and Echocardiography (DMS, VT, E) programs. Students are expected to perform at their highest functional level during all educational and clinical experiences in order to maximize the learning environment and ensure both patient and student safety. Thus, a student's performance at all times must be free of any impairment caused by prescription or non-prescribed drugs, including alcohol or marijuana.

On March 31, 2021, New York enacted the Marijuana Regulation and Taxation Act (MRTA), legalizing and regulating the use and possession of cannabis for adults aged 21 and up across the state. However, the MRTA's impact is limited for CURE students due to continuing requirements under federal law.

Although the MRTA changes the way New York State regulates cannabis, using and possessing cannabis in any form remains a crime under federal law. Specifically, New York higher education institutions remain bound by their federal requirements under the Drug-Free Schools and Communities Act and the Drug-Free Workplace Act. Under these laws, the use, possession, and distribution of cannabis for any reason must be prohibited and subject to the student code of conduct or employee disciplinary actions. Failure to comply with federal law may result in the termination of all federal financial assistance, including federal student financial aid grants. As a result, CURE's existing campus policies prohibiting the use of cannabis must remain in effect. Possession or use of cannabis remains prohibited on CURE property, including classrooms, skills labs, and offices.

For the protection of students, employees, and patients, students enrolled in the Center for Ultrasound Research and Education's Allied Health Program (which includes an externship assignment to patient care facilities such as hospitals and other health care settings) are required to comply with the following policies.

MEDICAL MARIJUANA POLICY

a. The Center for Ultrasound Research and Education (CURE) prohibits the possession and use of marijuana in all forms, in on-campus and off-campus student activities, including externships and clinical learning experiences in its allied health program. This policy is dictated by the Federal Drug-Free Workplace Act of 1988 (41 U.S.C. § 701-707 as amended) and CFR 182.5 through 182.40 which requires that all organizations receiving grants from any Federal agency to agree to maintain a drug-free workplace, which prohibits any person, including a medical marijuana cardholder or recreational user, from possessing, distributing, or using marijuana on the campus of any public or private post-secondary institution regardless of the decriminalization of marijuana in New York State. Federal legislation prohibits any institution of higher education that receives federal funding from allowing the possession and use of marijuana on campus or at any school/district-related activity or event.

b. CURE receives federal funds through grants and federal student aid (financial aid). CURE continues to enforce current policies regarding controlled substances, and any student or employee who violates school policy prohibiting the use, distribution, or possession of illegal drugs on campus or in student activities, including educational externships, will be subject to disciplinary action.

c. Students enrolled in the DMS, VT, E program are required to undergo and pass a school-endorsed ten-panel drug and/or alcohol screening analysis to remain in the program and be eligible for placement in a clinical facility. Students assigned to clinical education experiences at the institutions' contracted facilities may also be required to undergo and pass additional random and scheduled drug screenings to remain at that clinical facility and in the program. Students who fail a screening or refuse to submit to a screening within the designated time frame will be ineligible for clinical placement, which will affect their program status. Students with a positive drug test may appeal the results within five (5) days of notification of the results. This appeal must be in writing and delivered to the Campus Registrar. An appeal by a student who claims that he/she tested positive due to a prescription drug and was unable to clarify this matter with the Program Director or Campus Registrar shall include evidence from a health care provider of the type of prescription, dates of permissible use, and dosage amounts. Students whose appeals are denied may reapply for re-entry into the program after six months. Requests for re-admission will be considered on a case-by-case basis and in accordance with program criteria.

d. Urine drug screens are required of students prior to attending any healthcare courses, including clinical experiences. Medical marijuana, or its metabolite, is not an accepted substance in urine drug screens and will result in a positive urine drug screen. Students with a prescription for medical marijuana would not be considered exempt from urine drug screening.

All placements governed by this clinical placement/externship agreement are hereby identified as safety-sensitive positions where the health and safety of the populations served are at issue.

Supplemental Information

Students who are notified of a “negative-dilute” result will submit to a random drug test within 24 hours of the previous test in order to confirm the negative status of the screening. Additional random testing may also be required.

Students who test positive for marijuana are unable to continue in a clinical placement, which will affect their status in the program. While the use of marijuana is permitted in New York State, marijuana remains classified as a controlled substance under federal law, and its use, possession, distribution, and/or cultivation at educational institutions remains prohibited.

It is CURE’s intent to uphold the most stringent part of the law and further requires students to consider the consequences of their actions before indulging in recreational or medically prescribed substances. Students will be exposed to real-life scenarios while on an externship at a medical facility. As such, it is important to understand the relationship between marijuana use and the healthcare system. The ability to perform the duties of an ultrasound technologist is critical to patient care and safety. Students in externship training at a medical facility cannot be impaired while attending to patients, supervised or unsupervised. This policy is in effect to maintain the school's compliance with Federal requirements and to ensure CURE is sending qualified technologists into the workforce who are effective despite the rigor of the healthcare industry's expectations.

EXTERNSHIP POLICIES

CURE believes that externships/clinicals are an integral part of the ultrasound program and makes every effort to ensure students begin in a timely fashion. It is our aim to provide students with the knowledge, technical proficiency, and job readiness to be employable for entry-level positions in the allied health care field. Good attendance is a very important employment trait that will not only help students obtain employment but also help them maintain employment.

CURE currently does not offer externship or clinical experiences at night. All clinical hours must be completed during the day.

PRE-EXTERNSHIP REQUIREMENTS

1. General Health Requirements

Students must be able to fully and successfully participate in all program activities whether in the classroom, laboratory or clinical setting. This includes, but is not limited to, the capacity for sensory and motor functions that allow independent classroom/laboratory/clinical performance and routine and emergency client care. It is essential that students in CURE's Allied Health Program are able to perform a number of physical activities in the clinical portion of their program. For example, students may be required to physically assist and/or lift patients or equipment, stand for several hours at a time and perform bending activities. The clinical experience places students under considerable mental and emotional stress as they undertake responsibilities and duties impacting patient lives. Students must be able to demonstrate rational and appropriate behavior under stressful conditions. Any student having a temporary medical condition that inhibits or restricts activities must supply a written explanation from their physician. Should a student be unable to participate partially or fully in the program's activities, they may be withdrawn from the program.

Should a student require any type of special accommodation, the student must contact the Campus President or Program Director or in advance of the first-class meeting and provide appropriate documentation.

Pregnant students may want to take special precautions due to the physical requirements and possible exposure to harmful diseases, substances, or radiation. Accommodations will be made if reasonable and possible. In the externship portion of the program, students may be routinely exposed to some forms of radiation or chemicals that may be harmful to an unborn child, the program must inform the student of all precautions and the student must decide of what they wish to do. CURE will not impose any academic penalty due to pregnancy, including the parenting of a newborn.

If a student believes that he or she cannot meet the standards without accommodations, the Allied Health Program must determine, on an individual basis, whether reasonable accommodation can be made.

2. Immunizations

Students must be in compliance with immunization policies of the Allied Health Program in which they are enrolled. The program will provide students with health requirements applicable to that program and the deadline by which students must submit proof of meeting such requirements. Individuals should consult with their physician regarding necessary and available vaccinations. Students will be responsible for the costs of completion for all immunization requirements. The following is a description of immunizations that may be required and the type of documentation that a student would have to provide to verify the requirements have been met. If there is a communicable disease outbreak, additional vaccinations may be required as specified by the local public health agency. Proof of all immunizations and tuberculin skin tests should be copied and submitted to the Campus Registrar for review.

Health and Safety requirements are subject to change without notice depending on clinical agency requirements. If the requirements change due to our agreements with our clinical facilities you will be notified and will be required to meet the changes in requirements

A. COVID-19 Vaccine

Students participating in clinical settings at a licensed or accredited healthcare institution which includes hospitals, doctor offices, or other medical facilities may be required to provide proof of COVID-19 vaccination and subject to regular health screening and testing as determined by the healthcare institutions. CURE will require all students to show proof of vaccination in order to ensure compliance with our clinical partner's health and safety requirements.

CURE cannot provide accommodation in the clinical setting and cannot force our clinical partners to provide accommodations to students. CURE's clinical department will work with students in an effort to provide clinical experiences necessary for the completion of the program.

B. MMR (Measles/Rubeola, Mumps, & Rubella)

MMR is a combined vaccine that protects against three separate illnesses – measles, mumps and rubella (German measles) – in a single injection. Measles, mumps, and rubella are highly infectious diseases that can have serious, and potentially fatal, complications. The full series of MMR vaccination requires two doses.

If you had all three illnesses OR you have received the vaccinations but have no documented proof, you can have an IgG MMR titer drawn, which provides evidence of immunity to each disease. If the titer results are POSITIVE, showing immunity to each disease, a copy of the lab results must be provided to the Campus Registrar and Clinical Site Manager prior to being assigned a clinical externship site.

Requirements:

a) Submit documentation of two MMR vaccinations on separate dates at least 4 weeks apart.

OR

b) Lab documentation of POSITIVE titer results for each disease (measles, mumps and rubella).

OR

c) NEGATIVE or EQUIVOCAL titer results for measles, mumps, or rubella indicate lack of immunity, meaning you must submit documentation of one MMR booster dated after the negative or equivocal titer.

If the student has prior immunizations, written documentation of all doses is required. If results are negative and documentation is unavailable, a new series is required.

Please Note: All documentation must include the student's full name and the date the immunization was administered.

1. Tuberculosis (TB)

Tuberculosis (TB) is caused by the bacterium Mycobacterium. All students must provide documentation confirming a negative TB status. Documentation may include a negative 2-step Tuberculosis Skin Test (TBST) or a negative blood test (QuantiFERON or T-Spot) performed within the previous six (6) months. The TBST or negative blood test must remain current for the duration of a student's enrollment.

To maintain compliance with annual TB testing requirements, students who initially submitted a 2-step TBST may submit a current 1-step TBST for subsequent annual testing. A TBST is considered current if no more than 365 days have elapsed since the date of administration of the second of the 2-step TBST. Most recent skin testing or blood tests must have been completed within the previous six (6) months.

If you have ever had a positive TBST, you must provide documentation of a negative blood test or negative chest X-ray within the last twelve months.

2. Hepatitis B

Students may be exposed to potentially infectious materials, which can increase their risk of acquiring hepatitis B virus infection, a serious disease that can cause acute or chronic liver disease, which can lead to a serious, lifelong illness. CURE recommends that all students receive the hepatitis B 3-vaccine series.

Effective immunization status can be proven by a titer confirming the presence of anti-Hbs or HepBSab antibodies in the blood.

Please note: if a student submits a non-immune titer for Hepatitis B, they will be required to receive a booster or recommendation from their healthcare provider. Boosters must be dated after the titer.

Students may choose to decline the hepatitis B vaccine; however, a lack of immunity to hepatitis B means that students remain at risk of acquiring the disease. Any declination must follow the proper protocol for medical or religious accommodation processes.

3. Tuberculosis (TB)

Tuberculosis (TB) is caused by a bacterium called Mycobacterium. All students are required to provide documentation showing a negative TB disease status. Documentation may include a negative 2-step Tuberculosis Skin Test (TBST) or negative blood test (QuantiFERON or T-Spot) performed within the previous six (6) months.

If a student has had a positive TBST, they must provide documentation of a negative blood test or negative chest X-ray dated within the last twelve months.

4. CPR BLS (Healthcare Provider or Equivalent) Certification

CPR BLS is a procedure performed on persons in cardiac arrest in an effort to maintain blood circulation and to preserve brain function. Students are required to complete an acceptable Basic Life Support course to learn CPR. CPR BLS certification must include infant, child, and adult, 1-and 2-man rescuer, and evidence of a hands-on skills component. Due to accreditation and clinical partners' requirements, American Heart Association CPR BLS must be completed.

The American Heart Association offers in-person courses and a blended-learning course. Students who complete online courses must complete the hands-on skills training and testing, as well as the online didactic portion, to be eligible to receive a card. CPR BLS training without the hands-on skills training and testing component will not be accepted. Students are required to maintain current CPR BLS certification throughout enrollment in the program.

If utilizing a third-party vendor for the American Heart Association, it must include the AED component. If you are unsure, please contact your Program Director before enrolling in a CPR course.

5. Statement of Health Clearance

Must be completed and signed by a licensed healthcare provider (M.D., D.O., N.P., P.A.) within the past six (6) months of the clinical externship start date.

6. Castle Branch Background Check

All students are required to complete background screening before entering CURE's DMS, VT, E program. Students may be required to complete a second background check upon completion of the didactic portion of the program to satisfy clinical externship requirements. The clinical department will identify students for whom a background check is required for externship onboarding. The student will be required to obtain a background check from the Student Accounts Office, submit a current photo ID, and pay a $150.00 fee. Results of the background check can take approximately 48 hours.

7. Preclinical Drug Screening

All students are required to submit to a pre-clinical urine drug screen. Students are expected to follow the guidelines and timeline provided by the clinical department. All drug testing is administered by Quest Diagnostics. Students are expected to pay $40.00 when the toxicology form is picked up on campus. Students are expected to submit to the drug test within 24 hours and no later than 48 hours after paying for the test. Extenuating reasons for not submitting to a drug test within the specified timeframe must be communicated to the Registrar and Program Director immediately.

a. It is important that students understand that they **may not** take a prescription to the lab to be evaluated during the testing process. The laboratory will conduct the urine screening and will provide all results to the campus designee.

b. If the initial drug screening results indicate a diluted sample, an additional test must be performed on the sample at the student's expense. Diluted test results will be provided to the campus designee immediately.

c. If a student receives a second negative dilute, the student will be required to immediately meet with the Program Director to understand why the toxicology test indicates a diluted sample. If the student provides a plausible reason, supported by documentation from a medical professional explaining why the test is diluted, the student will remain in the program, and the program will require random, ongoing tests at the student's expense.

d. If a student provides a positive sample that Quest Diagnostics indicates may be due to food consumption, the program will verify that information. The result will remain positive, and students will be asked to retest within a designated time frame at the student's expense.

e. If a student tests positive for substances, the Campus Registrar or Program Director will contact the student to inquire about any prescription drug use.

f. If the Academic Department determines that the positive result may be related to food consumption, the student will have 48 hours to retest at the student's expense. If the second test is positive, CURE will follow due process to review the student's removal from the program.

Prior to beginning their clinical assignments, students may be required to have updated:

- Statement of good general health, signed by a health practitioner.
- Negative toxicology screening.
- Hepatitis B Titer/Vaccine
- Tuberculosis Test (TB Test)
- Measles, Mumps, Rubella (MMR) Titer/Vaccine
- Meningococcal Form
- COVID-19 Vaccine
- Background checks may also be required by certain clinical sites.

Students who do not meet these mandatory requirements may be dismissed from CURE for failure to meet externship requirements.

PROFICIENCY LAB

Before attending an externship site, students must be adequately trained in diagnostic procedures. The New York State Education Department permits CURE to conduct proficiency training for up to two weeks after a student completes the didactic portion of the program. On-site lab sessions are provided to ensure that proper clinical procedures are followed in preparation for clinical rotations. To enhance scanning education, students receive intensive proficiency training in the specialty area they will be training in for the next 9 months. The proficiency training is supervised by registered faculty, and the primary focus is to assist students in obtaining accurate images within a specific timeframe.

CLINICAL SITE ASSIGNMENTS

Students do not have the option to choose their sites. Sites are assigned based on availability and the skills/procedures required to meet the minimum registry requirements. CURE offers sites in the metropolitan area and many surrounding areas. Some students may be assigned to facilities that require travel to and from the facility or possible relocation. Students are also responsible for the cost of parking and travel expenses while attending externship/clinical courses.

CLINICAL ROTATION PROHIBITION

Students are not permitted to complete their externship hours at a facility where they are employed. This includes facilities that are part of a healthcare system and may operate under a different name but are owned wholly or in part by the same subsidiary or group, whether public or private. This policy also includes affiliates of the organization where the student is employed. For example, if a student works for a healthcare facility in New York City but wants to complete externship hours for the same healthcare system (or an affiliate) at another location anywhere in the tri-state area, the student will not receive approval to complete their externship hours at either facility. Likewise, if a student is a contracted worker or works for an employment agency that has assigned the student to a particular healthcare facility, the student will not be permitted to complete their externship hours at that facility or any other affiliated facility.

Students are also prohibited from being placed at an externship site where a relative or friend is employed and has made assertions or promises to the student that the student can complete their hours at that site/location because the friend or relative has some influence over the student's acceptance.

Students who willfully and knowingly seek to conceal their employment at a facility that violates this policy by failing to disclose the conflict of interest that exists if they begin an externship at a site where they are either employed directly or indirectly, or have friends or relatives who work at the site, to the Program Director, Clinical Site Manager, or any member of the clinical team BEFORE the rotation begins, will be removed from the site for violating this policy. Hours completed at the site will not count toward the hours required in the externship portion of the program. The student will also be in violation of CURE's conflict of interest policy as it relates to externships and will be subject to appropriate disciplinary action, which may include expulsion from the program.

Students who are pregnant during their externship may be exposed to ionizing radiation, which poses potential health risks to the student and the unborn baby. Students will be required to sign a Declaration of Pregnancy before being assigned to a site or at any time during their externship, as applicable. Students may withdraw from the program after giving birth and restart the program once medical clearance has been received from the student's physician.

All students who successfully complete 1,500 hours of the didactic portion of the Allied Health Ultrasound program must complete the final phase of their program, consisting of 900 clock hours of an externship in a health care environment. The externship consists of three (3) 300-hour quarters. The externship academic requirement is completed at an approved off-site facility.

All clinical externship sites must be pre-approved by the school before the student completes any hours at the site. The school is responsible for securing sites for students to complete the clinical portion of the program. However, if a student plans to complete any clinical hours at a site with which the school is not affiliated, the site should be presented to the Program Director and the Clinical Site Manager for their review. The school will visit the site and conduct a viability study to ensure the potential site meets the requirements of the school's program. Once the viability study is concluded, an articulation agreement must be signed by both the potential site and the institution. The fully executed contract is then submitted to the New York State Education Department for approval. Any student wishing to secure their own site must alert the Program Director, the Clinical Site Manager, or a member of the clinical externship team before completing the didactic portion of the program.

Approval of a new site can take months, and as such, students seeking the convenience of being placed at a particular site that is not one CURE already has a contract with cannot wait until they are nearing the end of (or have completed) the didactic portion of the program to inform the campus of their clinical preferences.

Students are expected to be punctual and professional and to adhere to the established procedures at the site where they will complete their clinical rotations. Students will be supervised and evaluated by a registered ultrasound technologist at the site. Each student will be visited at their clinical site by the Clinical Site Manager, the Program Director, and select faculty who are registered sonographers in the field the student is pursuing during the externship.
During the onsite visit, CURE's clinical representative will conduct an academic briefing with the supervising sonographer to review the student's performance during the externship, including scanning ability and proficiency. The representative will also

address with the student any areas of concern that the site supervisor may have indicated in performance evaluations submitted to the clinical team. Since the externship is primarily a learning and adaptation period, students will not be paid and are responsible for transportation to and from the externship site. Externship hours cannot be paid, as doing so violates regulatory and registry policies. Students will learn firsthand the office routines and clinical procedures during the externship experience. All externship hours are completed during the regular business day and as defined by the clinical site.

Students will be evaluated by their on-site supervisor on attitude, professionalism, and performance of duties, with scanning ability emphasized as the most important criterion. As with an off-campus course, students dismissed by the site for any lack of adherence to the site's policies or for any lack of professionalism, reliability, or scanning ability, or for any violation of CURE's code of conduct, will have to meet with members of the ARC and the clinical team to examine the nature of the dismissal and the student's potential to be transferred to another site to complete any remaining hours. Violations that are dubious in nature, such as falsifying an externship log pertaining to hours completed or signing the clinical log with a false signature, are grounds for immediate expulsion from the site and from CURE's Ultrasound program. If a student is expelled from the program for a dubious violation, there is no appeal recourse for the student.

Students who are dismissed from a site for any reason other than one requiring expulsion may be able to complete the externship portion of the program at another site. The student will be withdrawn from the program if securing another site takes longer than fourteen (14) calendar days and will be re-enrolled in the program once a site has been secured. Students who are dismissed from a site for a second time will undergo an investigative meeting and be remanded to the campus to meet with the ARC and clinical team to review the circumstances. Upon completion of that meeting, if the ARC and clinical team determine that there are merits for the student to continue the externship, the nature of the meeting and the merits found will be documented in the student file. In this instance, the student will be withdrawn from the program for a second time and will not be reinstated until the student finds an alternate site on their own. The school will not find another site for the student after dismissal from a site for the second time.

Students may have to accept a clinical site within 60 miles of either the student's home or the campus. Students who decline a clinical site more than once will be withdrawn and will not be allowed to progress in the program. Students who decline a clinical site a second time may not be able to continue in the program, since progression in the program is contingent upon successful completion of the clinical assignments. Therefore, students may be subject to dismissal from the program.

**It is important to note that externship hours are controlled by the site and are subject to the availability of the onsite supervising ultrasound technologist assigned to the student. While students are accustomed to attending class typically 3 days per week, Monday, Wednesday, and Friday, from 8 am to 5 pm, externship hours can vary. Students may be required by the site to complete weekly hours on days other than those they are accustomed to. For example, at a particular site in New York City, one student may be assigned to attend Tuesday, Wednesday, and Friday, while the other student may be required to attend Monday, Tuesday, Thursday, and Friday. All clinical site hours are, for the most part (with some exceptions), determined by the site.*

Students who may have obligations, such as a work schedule, on days they were not attending classes during the didactic phase of the program, should be aware that the requirements of the externship portion of the program will require them to make adjustments so that the externship hours can be accommodated.

CLINICAL TIME SHEETS / ATTENDANCE LOG

All students on externship or clinical assignments are required to submit weekly clinical logs (attendance records) via email. Students who fail to submit weekly attendance information by 9 am on Monday morning may be required to report to the school in person to meet with a Clinical Site Manager or Program Director. FAILURE to submit time sheets and meet with the Academic Department in a timely manner may result in any hours submitted after the deadline being repeated before a student will be given credit.

* Original signed time sheets must be submitted at a minimum of once a month to the campus.

PATIENTS AND CONFIDENTIALITY

- Students must observe the same confidentiality principles as staff and employees.
- All students are required to comply with the Health Insurance Portability and Accountability Act (HIPAA) for the duration of their professional program.
- All patients have the right to expect that case discussions, consultations, examinations, and treatment will be conducted in a setting that provides maximum privacy.
- Knowledge of patient information should remain confidential and not be discussed in the hallways, cafeteria, elevators, or social situations outside the institution.
- All records and charts of all departments are legal documents. Every precaution should be taken to ensure that only authorized personnel handle these reports.

- Personal observations about patients' studies or images are never shared with patients or other non-department personnel.
- Requests for patient information should be directed to a physician.
- No information about a patient's care or an institution's affairs is to be disclosed to anyone not directly involved in the situation.

Students are required to complete 100% of their scheduled clinical/externship hours. If students miss any externship/internship time, arrangements for make-up time must be made with the externship/internship site supervisor and discussed with the Clinical Site Manager, Campus Registrar, and Program Director. Students will not be considered to have completed their externships/internships until the site supervisor has certified all required attendance hours.

For students receiving veterans' benefits, the Department of Veterans Affairs will be notified whenever students are placed on an attendance warning and/or terminated for failing to meet attendance requirements. The Department of Veterans Affairs will also be notified if a student re-enters the institution after such termination.

22 SCHOOL REGULATIONS AND INFORMATION

STUDENT CONDUCT

The Center for Ultrasound Research and Education (CURE) maintains policies and rules that are consistent with its announced educational objectives and that support the achievement and protection of these objectives. Any student unable or unwilling to abide by CURE policies and rules may expect some form of disciplinary action. CURE may dismiss any student whose conduct is unsatisfactory and shall be under no liability for such action. Disciplinary actions include reprimand, probation, and dismissal.

Upon acceptance to the school, each student agrees to demonstrate professional behavior and maintain a professional appearance, enabling the school to recommend the student to prospective employers as a professional, courteous, considerate, and well-mannered individual.

Students must always conduct themselves in an orderly and considerate manner on the school premises. Students must be present for classes in a coherent and receptive state. Any behavior that disrupts the school environment, including cheating, harassment, fighting, use of profanity, sleeping in class, and stealing, is not acceptable and may lead to probation, suspension, or dismissal from the school.

CURE defines the following as disciplinary offenses:

1. Academic Dishonesty: submitting false records of academic achievement; cheating on assignments or examinations; plagiarizing; altering, forging, or misusing an academic record; taking, acquiring, or using test materials without faculty permission; acting alone or in cooperation with another to falsify records or obtain grades, honors, and awards dishonestly.
2. Falsification: willfully providing CURE offices or officials with false, misleading, or incomplete information; intentionally making a false report of a bomb, fire, natural disaster, or other emergency to a school official or an emergency service agency; misusing, altering, forging, falsifying, or transferring CURE-issued identification to another person; forging or altering, without proper authorization, official school records or documents; or conspiring with or inducing others to forge or alter, without proper authorization, CURE records or documents.
3. Identification and Compliance: willfully refusing to identify oneself or falsely identifying oneself, or willfully failing to comply with a proper order or summons when requested by an authorized CURE official.
4. CURE Facilities and Services: acting to obtain fraudulently--by deceit, unauthorized procedures, bad checks, or misrepresentation--goods, services, or funds from CURE departments or individuals acting on their behalf; misuse, alteration, or damage of equipment, safety devices, or other emergency equipment, or interference with the performance of those specifically charged with carrying out emergency services; wrongful use of CURE properties or facilities.
5. Disorderly Conduct on the Campus: threats to, physical abuse of, or harassment that threatens or endangers the health, safety, or welfare of a member of the CURE community; breach of the peace; physically assaulting another; fighting; obstructing or disrupting teaching, administrative, or public service functions; obstructing or disrupting disciplinary procedures or authorized CURE activities; vandalism.
6. Violating classroom policies, such as eating in class or the skills lab, using cell phones or recording faculty during lectures or labs, sleeping in class, using profanity, engaging in disrespectful behavior toward fellow students, faculty, or staff, engaging in disruptive behavior that prevents the instructor from completing required course material, and leaving the classroom without informing the instructor of where they are going, especially when done multiple times during classroom instruction, will constitute a violation. Students will be removed from the class and will meet with members of the ARC and/or the Program Director before they are allowed back in class.
7. Mocking or insulting classmates for their opinions.
8. Asking the instructor questions that are not academically substantive or related to the specific course.
9. Theft and Property Damage: theft or embezzlement of, destruction of, damage to, unauthorized possession of, or wrongful sale or gift of property belonging to CURE, a member of the CURE community, or a campus guest.
10. Violating CURE policies and rules, which have been posted, publicized, and announced, provisions contained in CURE contracts with students shall be deemed “rules” under this code.
11. Weapons on Campus: possession of firearms, incendiary devices, explosives, articles, or substances usable as weapons or as means of disrupting legitimate campus functions, activities, or assemblies; or use of firearms, incendiary devices, explosives, articles, or substances calculated to intimidate, disturb, discomfort, or injure a member of the

CURE community.

12. Violations of Federal or State Laws of Special Relevance to CURE: When a violation of federal or state law, including but not limited to those governing alcoholic beverages, drugs, gambling, sex offenses, indecent conduct, or arson, occurs on campus, the offense will also constitute an offense against CURE. If a student is suspected of being under the influence of alcohol or drugs while on campus or participating in a CURE-sponsored event, the student may be requested to submit to random drug testing at the school's expense. If a student is asked to submit to drug testing, the student must leave campus immediately and be tested the same day at a qualifying laboratory. ** Students will be expected to return to class after being tested at Quest until the results are received by the school, which typically takes 2-3 days.

    (a) If the test is positive, the student is administratively withdrawn from the school and cannot appeal.
    (b) After a period of six (6) months, a student dismissed from the school due to a positive toxicology test may apply to be re-enrolled in the program.
    (c) The student will be required to request re-admission in writing and include an explanation of the positive toxicology test result, an explanation of the therapeutic assistance the student may have received during their time away from campus, and a statement explaining why CURE should give them another opportunity.
    (d) The ARC will review all such matters, meet with the student, and render its decision on whether the student will be permitted to return to the program.

13. Disruptive Noise: making noise or causing noise to be made in any manner that disturbs classes, meetings, office procedures, and other authorized activities.
14. Attempt to Injure or Defraud: to make, forge, print, reproduce, copy, or alter any record, document, writing, or identification used or maintained by CURE, with the intent to injure, defraud, or misinform.
15. Persistent Violations: repeated conduct or actions in violation of the above code are relevant in determining an applicant's or a student's enrollment in CURE.

The expectation of professionalism begins when the student applies to CURE for admission. In addition, students are expected to always conduct themselves as professional, mature adults, ethical in their actions, manners, and dress.

** All random and required drug testing must be conducted at the Quest Diagnostics testing center closest to the school: Quest Diagnostics - White Plains - Address: 280 Dobbs Ferry Rd, Sprain Brook Medical Center, White Plains, NY 10607. Phone: 914-946-6271 - Fax 914-946-6318. The hours of operation are Monday to Friday: 8 am to 12 pm and 12:30 pm to 4 pm. The only exception is Wednesday, when they are open from 8 am to 12 pm.

ELECTRONICS AND CELL PHONE USAGE

All electronic devices, including iPods and cell phones, must remain in the "OFF" position during class time. Cell phones and smartwatches should be in "SILENCE/VIBRATE" mode and may be checked only during breaks and only in general areas of the building. If you have a special circumstance that requires you to be reached immediately, please notify your instructor or Program Director BEFORE the class begins.

NO WEAPONS POLICY

CURE is committed to maintaining a safe and secure environment. CURE policy prohibits all persons entering school property from possessing, using, manufacturing, distributing, or selling any firearm, knife, explosive of any kind, Taser, or other weapon capable of threatening or causing bodily harm, regardless of whether the person is licensed to carry the weapon, except for authorized law enforcement officials. Anyone found in violation of CURE's policies shall be subject to disciplinary policies and procedures applicable to students, academic and staff personnel, and/or criminal prosecution by the appropriate jurisdiction. Individuals should immediately report weapons violations to the school's administration or call 911 if they feel an immediate threat of bodily harm. It is important to provide a description and location of the individual carrying the weapon.

SOCIAL MEDIA

Social media is designed for social interaction on the Internet and is created using highly accessible and scalable publishing techniques. It is published on blogs, social networking sites, online chat rooms and forums, video sites, and other platforms and venues. The school values the use of social media, such as Facebook, LinkedIn, Twitter, YouTube, texting, blogs, and online discussion groups (among many other forms), to promote positive social interaction. However, the school also recognizes the potential for misuse, inappropriate behavior, and abuse. Therefore, students presently enrolled at the school must know that they are liable and responsible for anything they post to social media sites.

- Students are prohibited from posting confidential or proprietary information about the school, its students, faculty, or staff on a social media site.

- Students are prohibited from sharing, disseminating, or transmitting electronic information that reveals any private or confidential information they may have learned about others (including patients) during their tenure at the school or at externship sites. Applicable federal and state requirements, such as FERPA and HIPAA, must be followed at all times.
- When participating in any form of social media, students are encouraged not to misrepresent themselves and to make postings that are both meaningful and respectful, without any slanderous or offensive language that may be directed at any member or group of the school community.
- The use of any social media site to harass, intimidate, or bully a fellow student, faculty member, member of the school, or affiliate is strictly prohibited and will not be tolerated. (See Policy on Cyberbullying.)
- When posting on social media sites, students must be mindful of all copyright and intellectual property rights, especially those held by the school.
- The use of the school logo, image, or iconography on personal social media sites to endorse a political party or candidate or to promote a product, cause, or event is strictly prohibited.
- Students are expected to comply with the Terms of Service of any social media site.
- Students who violate this policy may face disciplinary action, up to and including dismissal from school.
- Students are not permitted to post pictures or misrepresent themselves as employees of their clinical site.
- CURE students are prohibited from using the likeness of any clinical affiliate without the site's or healthcare system's express written consent.

CYBERBULLYING

The school is committed to providing a safe, positive, productive, and nurturing educational environment for all of its students. The school encourages the promotion of positive interpersonal relations among members of the school community. The use of any electronic communication device or venue to harass, intimidate, or bully a student, faculty, or staff member, whether by other students, faculty, staff, or third parties, is strictly prohibited and will not be tolerated. This prohibition includes any act that substantially interferes with, or is perceived to interfere with, a student's educational experience, opportunities, or performance. Any threats, verbal and/or psychological abuse, electronically transmitted or posted, or actions that cause or threaten to cause bodily harm or personal degradation will not be tolerated. Students who violate the policy against cyberbullying may face disciplinary action, up to and including dismissal from school. Students, faculty, staff, and other parties who believe they have been victims of cyberbullying should contact the Manager of Academic Integrity & Compliance, Campus Registrar or Program Director immediately.

ANTI-HAZING POLICY

Hazing is defined as any action or situation that recklessly or intentionally endangers a student's mental or physical health or safety, as determined by the school, for the purpose of initiation or admission into an affiliation with any organization recognized by the school.

Hazing includes, without limitation, the following as determined by the School: any physical brutality, such as whipping, beating, branding, forced calisthenics, or exposure to the elements; forced consumption of any food, liquor, drug, or other substance; forced physical activity that could adversely affect a student's physical health or safety; any activity that would subject a student to extreme mental stress, such as sleep deprivation, forced exclusion from social contact, or forced conduct that could result in extreme embarrassment; or any forced activity that could adversely affect a student's mental health or dignity. Hazing is a violation of the School's Code of Conduct. Failure to comply with this policy will result in disciplinary action, including, potentially, dismissal from the school.

VIDEO-RECORDING OR AUDIO-RECORDING POLICY

In the interests of maintaining an appropriate academic atmosphere in the classroom and encouraging class participation, video- or audio-recording is not permitted without prior approval from the Instructor teaching the class and the Program Director.

INTERNET USAGE

Internet access to global electronic information resources on the World Wide Web is used by the campus to assist students in obtaining education-related data and technology. The following guidelines have been established to help ensure responsible and productive Internet use.

- All Internet data that is composed, transmitted, or received via the campus computer communications systems is considered part of the school's official records and, as such, is subject to disclosure to law enforcement or other third parties. Consequently, students should always ensure that the information contained in Internet email messages and other transmissions is accurate, appropriate, ethical, and lawful.
- The equipment, services, and technology provided via the Internet are the property of the School. As such, the School reserves the right to monitor Internet traffic and to retrieve and read any data composed, sent, or received through its online connections and stored in its computer systems. Data composed, transmitted, accessed, or received via the Internet must not contain content that could be considered discriminatory, offensive, obscene, threatening, harassing, intimidating, or disruptive to any employee or other person. Examples of unacceptable content may include, but are not

limited to, sexual comments or images, racial slurs, gender-specific comments, or any other comments or images that could reasonably offend someone on the basis of race, age, sex, religious or political beliefs, national origin, disability, sexual orientation, or any other characteristic protected by law.

- The unauthorized use, installation, copying, or distribution of copyrighted, trademarked, or patented material on the Internet is expressly prohibited. As a general rule, if a student did not create the material, does not own the rights to it, or has not secured authorization for its use, it should not be posted on the Internet. Likewise, copyrighted and/or trademarked information should not be downloaded from the Internet to the school's networks or devices without obtaining prior written permission or possessing a legal bill of sale or license from the owner authorizing the use of such material.

Abuse of the school-provided Internet access in violation of law or school policies will result in disciplinary action, up to and including dismissal. Students may also be held personally liable for any violations of this policy. The following behaviors are examples of previously stated or additional actions and activities that are prohibited and can result in disciplinary action:

- Sending, printing, or posting discriminatory, harassing, or threatening messages or images
- Stealing, using, or disclosing someone else's code or password without authorization
- Copying, pirating, or downloading software and electronic files without permission
- Violating copyright law
- Failing to observe licensing agreements
- Engaging in unauthorized transactions that may incur costs for the organization or initiate unwanted Internet services and transmissions
- Sending or posting messages or material that could damage the organization's image or reputation, including the use of the school name, titles, and positions in any publication that may be perceived as offensive
- Participating in the viewing or exchange of pornography or obscene materials
- Sending or posting messages that defame or slander other individuals
- Posting on behalf of the School without explicit permission from the Campus President of the School
- Posting or discussing confidential patient/client information related to externship and clinical experiences, or any information or photographs concerning patients/clients or their families.
- Posting work-related pictures of School employees, students, or anyone associated with the school, without that person's permission.
- Attempting to break into the computer system of another organization or individual
- Performing operations against another organization's computers or networks to identify security vulnerabilities or disrupt service
- Refusing to cooperate with the security investigation
- Sending or posting chain letters, solicitations, or advertisements not related to educational purposes or activities
- Using the Internet for political causes or activities, religious activities, or any form of gambling
- Jeopardizing the security of the organization's electronic-communications systems
- Sending or posting messages that disparage another organization's products or services, or passing off personal views as representing those of the organization
- Sending anonymous e-mail messages or engaging in any other inappropriate or illegal activity

DISCIPLINARY STANDARDS

The following are the various degrees of disciplinary sanctions that can be imposed on students. Students charged with disciplinary offenses have the right to due process and appeal (see "Student Grievance Procedure").

(a) **(a) Reprimand:** An oral or written warning, as the circumstances of the case warrant. Immediate compliance with the policy in question or discontinuance of wrongful behavior is required. Failure to comply may result in Probation or Dismissal.

(b) **(b) Probation:** A special status with conditions imposed for a limited time following a determination of a policy violation or behavioral misconduct. Immediate and permanent compliance with the policy in question or discontinuance of wrongful behavior is required. Failure to comply can result in dismissal.

(c) **(c) Dismissal:** An indefinite dismissal or suspension from school. If, after evaluating the evidence received and considering the safety and well-being of students, faculty, and CURE property, the Campus President believes there is an indication that a student's misconduct will be repeated or continued, or that it poses a serious threat to students, faculty, and CURE property, the student will be immediately dismissed from school.

Note: CURE will confiscate any goods used in violation of school regulations, rules, or policies or local, state, or federal laws.

STUDENT/EMPLOYEE FRATERNIZATION

Employees of the school are prohibited, under any circumstances, from dating or engaging in any fraternization or undue familiarity with students, regardless of the student's age and whether the student may have consented to such conduct.

Further, employees may not entertain or socialize with students outside the school environment. Similarly, any action or comment by an employee that invites romantic or sexual involvement with a student is considered highly unethical, in violation of institutional policy, and may result in disciplinary action.

Inappropriate employee behavior includes, but is not limited to: flirting; making suggestive comments; dating; requesting sexual activity; physical displays of affection; giving inappropriate personal gifts; frequent personal communication with a student (via phone, e-mail, letters, notes, text messaging, social networks, etc.) unrelated to coursework or official school matters; giving or accepting rides; giving or offering housing; selling or buying anything, even of nominal value; providing alcohol or drugs to students; inappropriate touching; and engaging in sexual contact and/or sexual relations.
CURE's administration also expects that our students will behave professionally toward faculty and staff and will follow the same guidelines presented here for employees. If a student witnesses or learns of a school employee's participation in an inappropriate relationship with a student, we ask that the incident be reported immediately to the school's President, Campus Registrar, or Program Director.

PERSONAL APPEARANCE

Upon acceptance to the school, each student agrees to demonstrate professional behavior and appearance, enabling the school to recommend the student to prospective employers as a courteous, considerate, and well-mannered individual. Modesty and good taste are the principal guidelines for students while on campus. It is the students' responsibility to familiarize themselves with the dress code and the grooming policies of their program, especially those for medical programs. Students must comply with the dress code. Failure to comply may result in reprimand, probation, suspension, or dismissal. Appropriate professional attire is at the discretion of campus leadership. There will be no exceptions. Anyone not following the dress code will not be allowed to participate in class and will not receive credit for attendance.

DRESS CODE

One of the most important reasons for a dress code is to establish professionalism. CURE students must represent the school, themselves, and ultimately their employers in a positive light, and appearance is an important part of this responsibility. CURE's dress code is enforced for all students on CURE's property because students are training for the allied health field and proper attire is required without exception. The school's dress code must be followed whenever you are participating in school activities unless notified otherwise. This includes attendance in all scheduled classes and time spent on externship, as well as all unscheduled times when students are on campus for tutoring, extra help, extra practice, or assistance.

1. Attire
   a. Black scrub top (CURE logo) and black bottoms (clean and pressed)
   b. Solid shirts (black or white) may be worn underneath the scrub top during the cooler months, always tucked into the scrub bottoms.
   c. Socks (anklet or ankle length - bare ankles are not permitted)
   d. Black **or** white sneakers only. Mixed-color sneakers are not dress code-approved. Ugg's, Crocs, and other footwear are not approved.

2. Hair
   a. Hair longer than neck length must be tied back.
   b. Unnatural hair color, i.e., green, blue, pink, red, orange, purple, etc., is not permitted. Students who dye their hair after being accepted to CURE will be suspended for dress code violation and will not be permitted back into the program until the hair is dyed back to a natural color.

3. Jewelry/Piercings/Tattoos
   a. No large jewelry in piercings (esp. hoops) that could be snagged or pulled by a patient and result in injury.
   b. Rings are limited to wedding bands or a single ring.
   c. Tattoos should be covered (Visible tattoos may limit externship options or job opportunities)
   d. Visible piercings should not be worn (i.e., nose, tongue, eyebrows, lips, cheeks, etc.) while on campus and never during the externship portion of the program.

4. Nails
   a. Nails are to be clean and well-groomed and at an appropriate length.
   b. Long nails pose a risk to patients and can become entangled in the ultrasound probe wire and other equipment, causing possible injury.
   c. Nails can harbor bacteria. Although students always wear gloves during the skills lab and whenever they touch another person at school or on externship, patients and the healthcare industry perceive long nails as unhygienic. As such, CURE is obligated to ensure our students meet acceptable industry standards.
   d. Students will find it difficult to properly handle and manipulate a probe during the program and on externship if their nails are unnaturally long. As a rule of thumb, nails that prevent a student from making a fist are too long and must be shortened. Students who refuse to comply with this requirement will be suspended from class until they meet it.

5. Hygiene
   a. Proper personal and oral hygiene is required.
   b. Students should refrain from wearing strong-smelling perfumes or fragrant lotions.

6. Headwear
   a. Head coverings are not permitted unless worn for religious, medical, or other pre- approved purposes.
   b. Students wearing head coverings such as baseball hats, headscarves, shower caps, beanies, or doo-rags because of a haircut or undone hair are not permitted.

STUDENT GRIEVANCE PROCEDURE

This grievance procedure is intended to provide an orderly process for examining or resolving grievances of a professional nature within the established structure of the school. It is understood that this procedure is available to students on a voluntary basis and that any student shall have the right to pursue a grievance through regular administrative channels. The term grievance shall not apply to any legal matter in which the administration is within its authority to act.

Definitions

1. Grievant – "Grievant" shall mean a student.
2. Grievance – A "grievance" shall mean a written claim by a grievant that there has been a violation, misinterpretation, or inequitable application of any existing school policies, rules, or regulations that substantially affects the grievant.
3. Party In Interest – A "party in interest" is the grievant, the instructor(s), or the administrator(s) involved in the examination and resolution of the claim.

Informal Procedures

1. Level One – Instructor
   a. The parties in interest acknowledge that it is usually most desirable for a student and the instructor directly involved to resolve problems through free and informal communication. The grievant shall address his/her concerns with the instructor within five (5) working days of an issue arising in or outside the classroom.
2. Level Two – Campus Registrar (DOE)
   a. If the grievant is dissatisfied with the response or solution provided at Level One, the student must submit a written grievance to the Campus Registrar within ten (10) calendar days of attempting to resolve the issue with the instructor. The grievance must specifically identify the policy, rule, and/or regulation that has been violated, misinterpreted, and/or inequitably applied, and explain how the grievant has been adversely affected. Upon receipt of the written grievance, the DOE and/or designee has fifteen (15) working days to provide a written response to the grievant. The DOE may arrange an in-person meeting with the grievant during this period, if applicable.

Formal Procedures

1. Level One – Campus President
   a. If the grievant remains dissatisfied with the informal procedures, the grievant has ten (10) calendar days from receipt of a written response from the DOE to present the original written grievance to the Campus President. The Campus President may arrange an in-person meeting within fifteen (15) working days of receipt of the grievance, if applicable. At the end of the stated timeframe, the Campus President and/or designee shall provide the grievant with a written answer to the grievance. This response will represent the institution's final decision and conclude the appeals process.

2. Level Two – Students who are dissatisfied with the final ruling or any action taken by the school may contact: *The Accrediting Bureau of Health Education Schools (ABHES), 6116 Executive Boulevard, Suite 730, North Bethesda, MD 20852, Tel (301) 291-7550. Students may also contact the New York State Education Department, Bureau of Proprietary School Supervision, 116 West 32nd Street, 5th Floor, New York, New York 10001, Telephone Number: (212) 643-4760.*

FAILURE TO APPEAL

Should the grievant fail to appeal a grievance decision within the ten (10)-working-day period during the appeals process, the current decision at that stage will be deemed acceptable and final. If the appeal is approved due to mitigating or special circumstances, the student will be placed on probation and considered to be making satisfactory academic progress and eligible for financial aid. Mutual written consent of the parties in interest may extend the time periods outlined in the informal and formal procedures.

REPRISALS

No reprisals of any kind shall be taken by either party or by any member of the administration against any party involved.

ACADEMIC HONOR CODE

Academic honesty, integrity, and ethics are required of all members of the school community. Students are expected to conduct themselves in a manner that reflects the school's ideals, values, and educational aims at all times. Academic integrity and honorable behavior are essential components of the professionalism required well beyond graduation.

The general public, professional organizations, and accrediting bodies hold individuals in the health care industry to a high standard and expect us to monitor our colleagues' professional behavior. As future health care professionals, students at the school have a responsibility to follow this model and guide their actions to serve the best interests of their fellow students, faculty, and potential patients by maintaining the highest degree of personal and professional integrity. Students are representatives of their profession in and out of the academic environment. Therefore, allegations of misconduct by any student of the school will be taken very seriously.
Work for which students receive credit must be the result of their own effort. Acting honorably in an academic setting requires more than simple honesty. Academic dishonesty occurs whenever a student undermines the academic integrity of the school or attempts to gain an unfair advantage over others. Examples of honor code violations include, but are not limited to:

1. Cheating
   - Using unauthorized materials, such as books, notes, cell phones, PDA accessories, or “cheat” sheets, to answer examination questions.
   - Taking advantage of information considered unauthorized by an instructor regarding exam questions.
   - Copying another student’s homework, written assignments, examination answers, electronic media, or other data.
   - Assisting or allowing someone else to cheat.
   - Failure to report cheating to an academic official at the school.

2. Plagiarism
   - Representing the ideas, expressions, or materials of another without providing references or credit.
   - Paraphrasing or condensing ideas from another person’s work without proper citation.
   - Failing to cite direct quotations and paraphrases properly.

3. Other forms of academic dishonesty
   - Fraud, deception, and the alteration of grades, attendance, or official records.
   - Changing examination solutions after the fact, inventing, altering, or falsifying laboratory data or research.
   - Purchasing and submitting written assignments, homework, or exams.
   - Reproducing or duplicating images, designs, or Web pages without crediting the developer, artist, or designer.
   - Submitting work created for another course without the instructor's approval.
   - Misrepresenting oneself or one’s circumstances to gain an unfair advantage.
   - Collaborating with another person without the instructor's approval.
   - Selling or providing term papers, coursework, or assignments to other students.

There are four possible consequences for violating the School’s Honor Code:

1. Failure of the assignment.
2. Failure of the course.
3. Expulsion from the School.
4. Rescinding of a certificate of completion.

All violations of the Honor Code will be reported to the school’s administration for investigation. Individual reports will also be evaluated in the context of potential patterns of dishonesty. The faculty, in conjunction with the administration, will determine the effect on student status and/or course grades resulting from substantiated reports of Honor Code violations.

Academic dishonesty jeopardizes the quality of education and diminishes the genuine achievements of others. It is everyone’s responsibility to actively deter it. Ignoring academic dishonesty is unacceptable. All members of the school community share the responsibility and authority to challenge and report acts of apparent academic dishonesty. Students, faculty, and staff are responsible for understanding and upholding the school’s policy.

CURE Ethics Violation Reporting

If a student witnesses violations of any School policy, the School asks that the violation be reported immediately. Students who feel uncomfortable talking to the Campus President or the Campus Registrar should make a confidential report to any member of CURE’s faculty or staff in person, or report violations anytime by sending a confidential email to cure.academic.integrity@gmail.com.

ACADEMIC REINSTATEMENT

A student dismissed for Satisfactory Academic Progress has the following options for applying for academic reinstatement:

1. The student may reapply to the Institution after speaking with the Campus Registrar. Reinstatement is subject to the following conditions:
   (i) (i) it must be mathematically feasible for the student's percentage of completed coursework to reach the required level by the end of the first quarter after reinstatement;
   (ii) In the judgment of the Campus Registrar, the student has the motivation to progress satisfactorily, and it is highly probable that the student's percentage of completed coursework will reach the required level by the end of the term after reinstatement.

TERMINATIONS

Students may be terminated from the school for the following reasons: excessive absenteeism, failure to notify the school of absences, failure to maintain required academic progress, inability to meet financial obligations, or failure to comply with the CURE's policies. The school reserves the right to terminate any student whose behavior or attitude reflects unfavorably on the faculty, students, administration, or the institution as a whole. Such students will be notified in writing of termination.

GRADUATION REQUIREMENTS

To graduate, a student must complete the following:

- Accumulated the required number of clock hours with passing grades within the student's program of study
- Achieved a Cumulative Grade Point Average (CGPA) of at least 2.0
- Have completed a minimum of 2,160 hours of the 2,400-hour ultrasound program.
- Completed the program within 1.5 times the program's length as published in this catalog
- Returned all school property, including books and equipment

All students must complete the clearance process upon finishing their externship rotation and satisfy all program completion criteria with the Program Director, Registrar, Financial Aid, Student Accounts, and Career Services. The clearance process requires approval from each department to ensure that the student is in good standing.

CERTIFICATES

Upon meeting the graduation requirements for the Allied Health Ultrasound program, CURE shall award a certificate. Registration and certification requirements for taking exams for one of the ultrasound Registries (ARDMS, ARRT, CCI) are set by the outside agency, not the school, and are therefore subject to change without notice to the school. CURE takes every precaution to monitor each Registry's examination requirements to ensure there are no academic obstacles that would prevent a student from successfully registering for the examination. The school cannot guarantee that graduates may be eligible to take certification exams, regardless of eligibility status at enrollment, or that graduates may successfully complete any such exams.

1. Graduate with High Honors

Students who complete their programs and meet certain criteria can earn the title of Honors Graduate. The criteria for this category are as follows:

- Cumulative Grade Point Average.
- Never placed on academic or attendance probation.
- Displayed professionalism throughout the program.
- Recommendation (in writing) from at least one instructor (student is responsible for requesting it from the instructor and delivering it to the Campus Registrar).
- Submits an inspiring essay to the Campus Registrar on the Director's chosen topic (prior to graduation), which may be read during the graduation ceremony.
- Assists the school by providing at least 10 hours of peer tutoring.

Recognition for Graduates with High Honors

Graduates with High Honors will be listed as High Honors in the Graduation Program. They will also receive a Certificate of Completion that reads "Graduate with High Honors." One or more Graduate with Distinction will have the honor of speaking at the graduation ceremony by reading their written essay.

2. Graduate with Honors

Students who complete their programs and meet certain criteria can earn the title of Honors Graduate. The criteria for Honors are as follows:

- Minimum of 3.85 CGPA
- Never placed on academic or attendance probation
- Displayed professionalism throughout the program
- Recommendation (in writing) from at least one instructor (student is responsible for requesting it from the instructor and delivering it to the Registrar)

Recognition for Graduates with Honors
Graduates with Honors will have their names listed as Honors in the Graduation Program. They will also receive a Certificate of Completion that notes "Graduate with Honors."

3. Graduate with Distinction

Students who complete their programs and meet certain criteria can earn the title of Graduate with Distinction. The criteria for a Graduate with Distinction are as follows:

- Minimum of 3.33 GPA
- Never placed on academic or attendance probation
- Displayed professionalism throughout the program
- Recommendation (in writing) from at least two instructors (student is responsible for requesting
- from instructors and delivering recommendations to the Registrar)

Recognition for Graduates with Distinction
Graduates with Distinction will have their names listed as "Graduate with Distinction" in the Graduation Program. They will also receive a Certificate of Completion that notes "Graduate with Distinction".

DRUG-FREE WORKPLACE / CAMPUS INFORMATION

STANDARDS OF CONDUCT

The CURE community must adhere to a code of conduct that recognizes that the unlawful manufacture, sale, delivery, unauthorized possession, or use of any illicit drug is prohibited on property controlled by CURE. If an individual associated with the institution is apprehended for violating any drug- or alcohol-related law while on school property or participating in an institution activity, the institution will fully support and cooperate with federal and state law enforcement agencies. Underage possession and/or consumption of alcoholic beverages are not permitted on property owned or controlled by the institution, and state laws will be enforced. Also, intentionally or knowingly selling or furnishing alcoholic beverages to persons under the age of 21, or to persons obviously inebriated, is not permitted on property owned or controlled by the institution.

The Center for Ultrasound Research and Education (CURE) maintains a drug-free environment and workplace. CURE is committed to creating and maintaining a professional campus environment free of alcohol and substance abuse and in compliance with New York state, local, and federal laws. The illegal possession, use, or distribution of drugs or alcohol by students, staff, and faculty members violates CURE's rules and federal and state laws.

CURE views the abuse of alcohol and legal drugs, as well as the use of illicit drugs, as contradictory to and harmful to the pursuit of career education and the realization of one's full potential as a student and member of this community. Accordingly, the School takes its obligation to address substance abuse very seriously.
Not only does substance and alcohol abuse have profound effects on the physical, emotional, and social well-being of the abuser, but the legal sanctions that may result from the possession, consumption, and distribution of illicit drugs and alcohol can be similarly, if not more, profound.

CURE prohibits the underage and unlawful possession, use, or distribution of illicit drugs and alcohol by students or employees on School property. CURE will impose disciplinary sanctions on students and employees who violate the standards. Disciplinary sanctions that may be imposed on students include a warning, disciplinary probation, suspension, and dismissal. Whenever the School determines that a student has violated one of the standards, it will consider, as a possible sanction, referring the matter to law enforcement officials for prosecution. Although sanctions will vary according to the specific circumstances of the case, and greater or lesser sanctions may be imposed depending on these circumstances, it is nonetheless important for students to understand the potential consequences of violating the School's drug and alcohol policies.

Federal, State, and Local Sanctions for Illegal Drug and Alcohol Use
There are numerous legal sanctions under federal, state, and local laws that can be used to punish violators of alcohol and drug laws. Examples of federal penalties are in the attached summary of federal trafficking penalties from the U.S. Drug Enforcement Administration.

New York state statutes provide sanctions regarding the use, possession, and/or sale of illicit drugs and the abuse of alcohol. New York's legal minimum drinking age is 21. Punishment varies depending upon the amount and type of drug and/or alcohol involved. Felony convictions range from one year to life imprisonment.

In New York, a person with a BAC (blood alcohol concentration) of 0.08% or greater who operates a motor vehicle or a boat is considered to be driving under the influence (DUI).

Penalties for Alcohol or Drug-Related Violations

Driving while intoxicated is a crime. A person's judgment, coordination, and ability to drive a vehicle are impaired by any amount of alcohol. The level of impairment depends on five conditions:

1. The amount of alcohol consumed
2. The amount of food you eat before or while you drink alcohol
3. The length of time you drink alcohol,
4. Body weight and
5. Your gender/sex

CURE's complete drug-free workplace policy can be found in the consumer information on the website: https://www.cure.edu/drugfreeworkplace.

Sanctions that will be imposed on Students and Employees for Violations of the Drug and Alcohol Policy

In addition to policies and practices that emphasize concern for the welfare of individuals, CURE also recognizes the importance of maintaining the safety and well-being of the community as a whole. The school therefore adheres to the following guidelines regarding the unlawful possession, use, or distribution of drugs:

The unlawful possession, use, or distribution of drugs will not be tolerated on school premises. Upon finding evidence of unlawful possession, use, or distribution of drugs on its premises by any student, the school will take appropriate disciplinary action, including, but not limited to, probation, suspension, or expulsion. Consistent with policies set forth in the CURE Employee Handbook, the school will take disciplinary action, up to and including discharge, against any member of the faculty or staff found to be unlawfully using, possessing, or distributing drugs on school premises. Faculty, staff, and students should also be aware that, in addition to sanctions set forth by CURE, they may be subject to criminal prosecution under federal and state laws that provide for fines, imprisonment, or loss of federal financial student aid upon conviction of drug-related offenses. Where appropriate or necessary, CURE will cooperate fully with law enforcement agencies.

Health Risks Associated with Illicit Drug Use and Alcohol Abuse

Below are summaries of the health risks and the signs and symptoms associated with illicit drug use and alcohol abuse. This is an overview, not a complete list. Each individual will experience the effects of the drug differently, depending on factors such as body size, sex, and other physical and psychological factors.

TREATMENT AND COUNSELING

Anyone who may be abusing illegal drugs and/or alcohol is encouraged to contact the following agencies for assistance in accessing rehabilitation programs:

New York Help Line: Dial: 211
New York Addictions Hotline: 1-800-210-1303

Trained telephone counselors are available 24 hours a day, 7 days a week. They provide NY residents with information about detox, evaluation, treatment, and professional and support groups available to drug and alcohol abusers or addicts who wish to stop their use of chemical substances. They also help locate 12-step support meetings and find answers to questions concerning drugs and alcohol.

Alcoholics Anonymous: (212) 870-3400
Narcotics Anonymous of NY & Westchester: (212) 929-7117
National Clearinghouse for Drug and Alcohol Information: 800-729-6686 - Hours: 24 hours/day
The nation's one-stop resource for substance abuse prevention and treatment information.

CURE strongly encourages students, faculty, and staff members who may have substance or alcohol abuse issues to use these resources.

17. STUDENT SERVICES

CURE's goal is student success. Through our student services initiatives, we strive to educate the whole person and help our students succeed in the classroom and in the field, in their relationships with faculty and other students, and in their growth and development toward their chosen career in ultrasound. Student Support Services will help students relieve or eliminate personal and familial tangible challenges and hardships that affect their ability to achieve their academic goals. Through the development of individualized success plans and referrals to a network of providers, Student Support Services will improve student wellness and success.

Advising

Academic advising is available throughout a student's enrollment at CURE to help identify and resolve academic problems. Individual advising sessions are scheduled by appointment and may occur outside regular class time. In addition, faculty members are available throughout the quarter to meet with students as needed. Students are invited to schedule academic advising appointments whenever they feel the need. Academic advising is provided by the Campus Registrar, the Program Director, and/or faculty.

Tutoring

Tutoring is available to all students. Students should understand that tutoring is not a substitute for regular attendance for the full length of the class day throughout the program. Students who have difficulty understanding and learning the material in a particular course should contact the instructor or Program Director to schedule tutoring sessions. Additional laboratory time may be provided for students who need to complete assigned lab projects or require extra help with laboratory activities. These sessions may be scheduled outside normal classroom instruction hours. Students should make arrangements with the instructor or Program Director.

Students with unacceptable academic performance may be required to accept special help or attend scheduled assistance sessions as a condition of continuing in the program. These sessions may be scheduled outside normal classroom hours.

Inclement Weather

In the event of cancellation due to bad weather, students will be notified by a CURE representative by phone, email, and/or in person as soon as possible. For additional verification of inclement weather closings or delays, students may elect to watch News Channel 12. In situations other than official CURE closings, students who elect not to travel due to inclement weather must contact their Program Director (or designee) for pre-approval. These cases will be evaluated on an individual basis and may include rescheduling missed classes and/or clinical assignments.

Student Parking

The school carries no insurance and accepts no responsibility for the loss of personal effects or damage to any motor vehicle parked in any designated parking area or in an area surrounding or near the school. Students who park in areas designated for other tenants of the building or on surrounding streets may have their car towed at the student's expense. Students are solely responsible for the safe operation of motor vehicles while on school grounds.

Personal Property

The safeguarding of personal effects in the school is the responsibility of each student. The school carries no insurance and accepts no responsibility for the loss of personal effects, including cash. Students must remove any personal property, including books, tools, computers, or clothing, from the school within five (5) days of the student's last day in class. Discarded property that is not claimed within the timeframe will be discarded without exception.

Housing Assistance

Although the School does not maintain dormitory facilities, students who are relocating must arrange their own housing.

Student Identification Badges

Student ID badges must always be worn at CURE and at CURE affiliate sites. A $10.00 fee applies to badge replacements.

Visitor Policy

Visitors, including family members, may be permitted in classrooms and other teaching areas only with prior authorization from the Program Director. Visitors are required to adhere to the same standards of conduct as students. Students are not permitted to bring underage children to school.

Student Activities

Throughout the school year, activities that foster school spirit and develop student leadership may be offered. The school believes that participation in these activities is an important part of the educational process, and student involvement is encouraged.

Field Trips and Guest Speakers

Field trips to program-related medical clinics, laboratories, and hospital facilities may be scheduled by the instructor and/or the Program Director. The purpose of these trips is to introduce students to the career field in their area of study and to supplement classroom instruction. Guest speakers may be scheduled to reinforce classroom training.

Professional Liability and Student Accident Insurance

CURE maintains Student Professional Liability insurance for all students and instructors while at externship or clinical sites. Student Professional Liability insurance is malpractice insurance intended to pay claims made against a student or an instructor by a third party, such as a patient in the student's care, for injuries the third party incurred while being cared for by the student.

All students at clinical or externship sites are supervised by approved faculty or on-site clinical personnel. Each student is covered only while supervised at a clinical or externship site. Coverage ceases upon termination of the student's enrollment, whether by graduation, withdrawal, or dismissal.

Student Professional Liability Insurance does not cover medical bills a student may incur if the student is injured while performing tasks that are part of the program curriculum. The school maintains Student Accident Insurance, which provides limited coverage for accidental injuries students incur while participating in school-sponsored activities related to the curriculum. Coverage is limited to activities that are part of and required by the student's curriculum and are school-sponsored. The school recommends that all students maintain personal health care insurance. Personal health care insurance provides primary coverage for medical bills in the case of an accidental injury while participating in school-sponsored activities.

In many instances, externship and clinical sites require that students maintain personal health care insurance. Failure to provide proof of personal health care insurance at the time of an externship or clinical site assignment may prohibit a student from certain sites and may delay the completion of the program. CURE recommends that all allied health students maintain personal health care insurance to minimize any conflicts with potential clinical sites.

It is the student's responsibility to immediately notify their instructor, externship/clinical supervisor, and the Program Director faculty about any accident or injury to themselves, another student, or a patient under their care that might cause liability to the student, the externship or clinical site, or the school. A written report must also be completed.

Personal Property

CURE is not responsible for any student’s valuable possessions. Valuable items should be closely monitored by each student.

Lost and Found

Anyone who finds unclaimed items must take them to the Program Director or the Campus Registrar. For lost items, check with the Program Director.

Copyright Protection Policy

Students will be held accountable for failing to comply with federal copyright and criminal laws that prohibit the copying or alteration of copyright-protected materials, such as computer programs, music, movies, photographs, or written materials. Students are expected to report violations if they become aware of them. The unauthorized distribution of copyrighted materials may subject students to civil and criminal liability. Penalties for copyright infringement include both civil and criminal penalties. At no time should any student make electronic or paper copies of any CURE or other copyrighted materials, as governed by law.

Academic Honesty and Plagiarism

Plagiarism is a violation of academic policy and will not be tolerated. All academic work, written or otherwise, submitted by students to their instructors or other academic supervisors is expected to be the result of their own thought, research, or self–expression. In cases where students are unsure about a question of plagiarism regarding their work, they are obliged to consult their instructors before submission.

When students submit work purporting to be their own but, in any way, borrow ideas, organization, wording, or anything else from another source without appropriate acknowledgment, they are guilty of plagiarism.
Plagiarism includes reproducing someone else’s work, whether it be a published article, a chapter of a book, a paper from a friend, a file, or anything else. Plagiarism also includes the practice of employing or allowing another person to alter or revise the

work a student submits as their own, whoever that other person may be. Students may discuss assignments among themselves or with an instructor or tutor, but when the actual work is done, it must be done by the student alone.

When a student's assignment involves research using outside sources or information, the student must carefully acknowledge exactly what, where, and how they have used them. If the words of someone else are used, the student must put quotation marks around the passage in question and add an appropriate indication of its origin. Making simple changes while leaving the organization, content, and phraseology intact is plagiarism. However, nothing in these Rules shall apply to ideas that are so generally and freely circulated as to be part of the public domain.
Submitting work completed in whole or in part for another class constitutes self-plagiarism and is unacceptable. Students who wish to pursue an area of inquiry from their prior studies must first obtain their instructor's approval, submit any previous written projects with their request, and outline the new research questions or issues they intend to investigate.

NOTE: The minimum penalty for plagiarism is a zero on the assignment for a first "minor" offense; more severe penalties may be recommended and are mandated by the Campus Registrar for "major" and subsequent offenses.
.

Personal Phone Calls
Personal phone calls during class instruction or clinical hours are not allowed. Personal calls are not permitted unless there is an emergency. In the event of an emergency, the student is asked to leave the classroom and contact their instructor at their earliest convenience.

Emergency Contact
CURE requires each student to have an emergency contact. Students are advised to provide their emergency contacts with CURE's main telephone number in case they need to be reached immediately.

Clinical Site Phone Use
If instructed to answer the telephone at a clinical facility, the student should always identify the department and provide their name (e.g., Ultrasound Department, Mary Smith speaking). These calls should be handled with professionalism, tact, and courtesy. Students should never use the phones at clinical sites for personal use, except in emergencies.

Prohibition of Cell Phone Photography
The use of cell phone photography is prohibited at CURE during class lectures, in the skills lab, and at all externship affiliates.

Transcript of Grades
Permanent transcripts of students' progress are maintained by CURE and are available to students upon written request to the Campus Registrar or the Campus Registrar. The first transcript is free; additional transcripts are $10 each.

No Smoking/Vaping
CURE prohibits smoking or vaping at any CURE facility, including CURE clinical sites. If a student chooses to smoke or vape during scheduled breaks, he or she may do so outside the building, at least 200 feet from CURE facilities. However, he or she must not wear the CURE uniform or any CURE items while smoking. Use of tobacco of any kind is not permitted inside the school's buildings. Smoking in non-designated areas is a violation of the School's Standards of Conduct. For the consideration of other students, staff, and patients, students are required to wash their hands and freshen their breath before returning to class or their clinical assignment after smoking.

Tuition Default Graduates
CURE graduates who are in default on their tuition payments will not have access to CURE alumni privileges, including but not limited to physics and registry reviews, scanning, and externships. We will follow federal and state guidelines regarding graduate tuition default.

Quarterly Refund Calculations
The student refund may exceed the amount stated above if the accrediting agency or Federal refund policy results in a larger refund.

Sexual Harassment
Any student who believes they have experienced or are experiencing sexual harassment should contact the Title IX officer listed in this catalog and on the school's website. A student may discuss the matter with the Campus President if they so desire. CURE maintains a zero-tolerance policy toward sexual harassment in any form, and students should report such acts promptly.

VIOLENCE AGAINST WOMEN ACT/TITLE IX

CURE is committed to maintaining a healthy, safe learning environment that promotes responsibility and respect regarding sexual conduct. Title IX offenses violate trust and respect, are prohibited, and will not be tolerated. This policy applies to academic, educational, co-curricular, and off-campus conduct. Title IX offenses include: rape and sexual assault, domestic violence, dating violence, and stalking. CURE will support and assist victims of sexual violence by directing them to community resources for medical care and counseling, and to local law enforcement. CURE will investigate student complaints, and a student who has committed a Title IX offense will be subject to disciplinary action, which could result in dismissal from school. CURE will provide students with educational materials on sexual violence so they can be informed of risks and take steps to ensure they do not become a victim or a perpetrator of a Title IX offense.

If a student is a victim of sexual violence, the student is urged to seek immediate medical assistance and to report the incident to the police. Prompt collection of physical evidence is essential should a person later decide to pursue criminal prosecution and/or a civil action. A student who is a victim of sexual violence involving a student at CURE or an employee is urged to make a complaint to the Campus President. Victim support and community resources are available even if the victim does not report to the police or make a complaint to the Campus President. If a student has knowledge of an incident of sexual violence involving a fellow student, the student should report the facts to the local police. Retaliation against an individual who reports a crime, brings a complaint, pursues legal action, participates in an investigation, or is a witness in any proceeding is prohibited and will not be tolerated by CURE. Should a victim of sexual violence request confidentiality, CURE will honor the request to the extent possible and allowed by law. CURE will not disclose the name of the victim of sexual violence unless required by law or with the victim's permission.

Title IX Grievance Procedure

In accordance with Title IX of the Education Amendments of 1972, CURE does not discriminate against persons on the basis of sex, sexual orientation, gender identity, creed, race, age, or national origin.

Procedures for Reporting and Responding to Reports of Discrimination

The following procedures have been adopted by the school to receive, investigate, and resolve complaints of sex discrimination. These procedures are designed to provide a supportive process for individuals who report discrimination and to ensure a fair process for those accused of discriminatory conduct. An internal investigation of allegations of institutional or systemic discriminatory treatment is intended to ensure that the school meets its commitment to an open and inclusive educational and employment environment. These procedures also describe the school's efforts to conduct timely, thorough, and fair investigations as required by law.

Sexual misconduct, including sexual violence, has been recognized as a form of discrimination in violation of Title IX. For emphasis, sexual misconduct may be referred to specifically herein, and in addition to "discrimination," which refers generically and inclusively to all forms of discrimination on the basis of sex.

Making Reports of Title IX Discrimination

The Title IX Coordinator has primary responsibility for coordinating efforts in investigating, resolving, implementing corrective measures, and monitoring the educational environment and workplace to stop, remediate, and prevent discrimination on the basis of sex. Managers, department administrators, and supervisors have a duty to identify and report discriminatory behaviors. Employees and persons responsible for supervising or ensuring the safety of others (including student employees in the course of their employment duties) have a duty to report any discriminatory behavior observed or reported to them. Managers, department administrators, and supervisors should be directly involved in resolving allegations of discrimination or sexual misconduct. CURE will investigate allegations of discrimination in consultation with the respondent's supervisor, provided the supervisor is not an alleged perpetrator. Managers, department administrators, and other supervisors have a duty to monitor the respondent's behavior and take appropriate disciplinary action if he or she continues to violate school policy or procedures, including further acts of discrimination and/or retaliation.

Investigation of Reports of Title IX Discrimination; Oversight by Title IX Coordinator

CURE's Title IX Coordinator has the authority to:

1. Accept all complaints and referrals from all campuses.
2. Keep accurate records of all complaints and referrals for the required retention period in accordance with the school's record retention policy.
3. Conduct investigations to the level required by DOE regulations.
4. Make findings of fact.
5. Identify specific corrective measures to stop, remediate, and prevent sex discrimination, including sexual harassment and other sexual misconduct.
6. Make recommendations for corrective measures, including training, counseling, and/or discipline, when appropriate.
7. Refer any recommendations for discipline in accordance with school policy.

8. Oversee the implementation of corrective measures, which may include follow-up to ensure that appropriate action was taken to complete the recommended actions.
9. Require a school administrator responsible for taking corrective action who decides not to adopt a recommendation of the Title IX Coordinator to explain the decision in writing.
10. If the Title IX Coordinator determines that the reasons offered by a school administrator for not adopting a recommendation for corrective action are insufficient, the Coordinator shall bring the matter to the attention of the Campus President. The President will notify the school's Chief Administrative Officer of the issues and circumstances and, in consultation with the Title IX Coordinator and any legal counsel, shall direct the administrator to take appropriate corrective measures to prevent discrimination from recurring and to remedy its effects on the complainant and others.

To ensure school-wide compliance with this policy and with federal and state law, the Title IX Coordinator must be notified of all reported incidents of discrimination or sexual misconduct and of their resolution, regardless of where the complaint is brought, investigated, or resolved. The Title IX Coordinator will monitor and coordinate the resolution of complaints handled by other offices with concurrent jurisdiction over Title IX discrimination or sexual misconduct.

The following procedures apply to members of the campus community as defined by CURE's policy prohibiting harassment:

Definitions:

Sex Discrimination: Behavior or action that denies or limits a person's ability to benefit from, or fully participate in, educational programs or activities, or employment opportunities because of a person's sex. Examples of the types of discrimination covered under Title IX include, but are not limited to, sexual misconduct, sexual harassment, sexual violence, failure to provide equal opportunity in educational and co-curricular programs, including athletics, discrimination based on pregnancy, and employment discrimination.

Sexual Misconduct: A range of behaviors, including sexual harassment and sexual violence. Includes unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature that (a) is sufficiently severe, persistent, or pervasive to limit a student's ability to participate in or benefit from an educational program or to create a hostile or abusive educational environment, or (b) explicitly or implicitly affects an individual's employment, unreasonably interferes with an individual's work performance, or creates an intimidating, hostile, or offensive work environment.

Gender Discrimination or Gender Harassment: Includes discrimination or verbal or physical harassment based on a person's gender that is not sexual in nature. CURE's policies prohibit gender-based harassment, which may include discrimination or sexual misconduct on the basis of sexual orientation, gender identity, or gender expression, and harassment or discrimination on the basis of sex-stereotyping.

Inquiry: A request from a member of the CURE community for information about the policy or the procedures for resolving a situation involving discrimination or sexual misconduct. An inquiry may also be an informal notification that discrimination or sexual misconduct may have occurred and/or a request for information about where or how to bring a complaint.

Complaint: A description of facts that allege a violation of CURE's policy against discrimination or sexual misconduct. The Title IX Coordinator may request that a complaint be made in writing.

Complainant: Student(s) or employee(s) of CURE who alleges that they have been subjected to discriminatory practices or sexual misconduct. A third-party complainant is a person who brings a complaint on behalf of another member(s) of the campus community who has allegedly been the subject of discrimination or sexual misconduct. Complainants may be individuals or groups of individuals who have been affected by discrimination or sexual misconduct.

Respondent(s): Person(s) who are members of the campus community and are alleged to have discriminated against or harassed another person or persons. Respondents may be individuals, groups, programs, academic or administrative units, or the institution.

Witnesses: Persons who have information about the alleged sexual misconduct that will tend to prove, disprove, or otherwise illuminate an investigation of a complaint.

Investigation: A fact-finding inquiry by the Title IX Coordinator that attempts to determine whether behavior in violation of the policy prohibiting discrimination or sexual misconduct occurred and to make recommendations for the resolution of discriminatory or harassing conditions.

Options for Resolution

Individuals who report discrimination or sexual misconduct shall be informed of options for resolving potential policy violations. These options include informal dispute resolution, referral to other school offices or programs, formal investigation by the Title IX Coordinator, and access to resources outside the school process. The school shall respond, to the greatest extent possible, to reports of discrimination or sexual misconduct submitted anonymously or by third parties not directly affected by the conduct. However, the response to such reports may be limited if the information in the report cannot be verified by independent facts.

Complainants and other individuals bringing reports of discrimination or sexual misconduct shall be informed about the range of possible outcomes of the report, including interim protections, remedies for the individual harmed by the discrimination or sexual misconduct, and disciplinary actions that might be taken against the accused as a result of the report, including information about the procedures leading to such outcomes.

Retaliation: An individual who is subjected to retaliation (e.g., threats, intimidation, reprisals, or adverse employment or educational actions) because he or she (a) made a report of discrimination or sexual misconduct in good faith, (b) assisted someone in making a report of discrimination or sexual misconduct, or (c) participated in any manner in an investigation or resolution of a report of discrimination or sexual misconduct may file a report of retaliation under these procedures. The report of retaliation shall be referred by the Title IX Coordinator to the appropriate academic or administrative supervisor.

Temporary Measures: At any point during the complaint process, the school may elect to place the respondent on investigative leave or reassignment, or authorize other temporary measures while an investigation is pending, including, but not limited to, “no contact” provisions.

Procedures for Informal Resolution

CURE encourages informal resolution when the parties seek to resolve the situation cooperatively, or when inappropriate behavior does not rise to the level of a violation of school policy as determined by the Title IX Coordinator but nonetheless adversely affects the workplace or educational environment. Informal resolution may include an inquiry into the facts but typically does not rise to the level of an investigation.

Informal resolution includes, but is not limited to, referral to another campus office or program, mediation, separation of the parties, referral to counseling programs, or targeted educational and training programs. Situations resolved through informal resolution are usually subject to follow-up at a later date to ensure the resolution has been implemented effectively. The Title IX Coordinator will document steps taken to help the parties achieve an informal resolution.
Some reports of discrimination or sexual misconduct may not be appropriate for informal resolution and may require a formal investigation at the Title IX Coordinator's discretion.

Procedures for Formal Investigation

In response to reports of discrimination or sexual misconduct, the Title IX Coordinator may conduct a formal investigation when the complainant does not wish to engage in informal resolution, when informal resolution is not appropriate, or when attempts at informal resolution are unsuccessful. In such cases, the individual making the report shall be encouraged to file a written complaint. In cases where there is no written complaint, such as third-party complaints, the Title IX Coordinator may initiate an investigation after a preliminary inquiry into the facts and will inform the person(s) who were allegedly harmed by discrimination or sexual misconduct of the decision to do so.

- Investigations of reports of discrimination or sexual misconduct shall incorporate the following standards:
  The Title IX Coordinator is the designated school official to conduct formal investigations of allegations of discrimination or sexual misconduct and to coordinate the school's response(s) to complaints of the same.
- The individual(s) accused of conduct that violates the school policy prohibiting sexual misconduct shall be provided a copy of the written complaint or otherwise informed of the substance of the allegations. If the individual(s) accused cannot be located, attempts to notify shall be documented.
- The individual(s) conducting the investigation shall be familiar with the policy prohibiting discrimination or sexual misconduct and have training and/or experience in conducting investigations.
- The investigation should generally include interviews with the parties, if available, interviews with other witnesses as needed, and a review of relevant documents as appropriate. Disclosure of facts to witnesses shall be limited to what is reasonably necessary to conduct a fair and thorough investigation. Participants in an investigation shall be advised that maintaining confidentiality is essential to protect the integrity of the investigation and that they should refrain from discussing it.
- At any time during the investigation, the investigator may recommend that appropriate school officials provide interim protections or remedies for the complainant or witnesses. These protections or remedies may include separating the parties, limiting contact between the parties, or arranging alternative workplace or student housing. Failure to comply with the terms of interim protections may be treated as a separate violation of the policy prohibiting sexual misconduct.

- The investigation will be completed as promptly as possible, and in most cases within 60 working days of the date the written complaint was received. If the investigation cannot be completed within 60 days, the parties shall be notified in writing.

Generally, an investigation will result in a written report that, at a minimum, includes a statement of the allegations and issues, a summary of the information considered, findings of fact, and the investigator's determination of whether school policy has been violated. For allegations of discrimination or harassing behavior, there are three possible findings:

- Substantiated: It is more likely than not that the allegation is true.
  (a) Unsubstantiated: It is not possible to determine whether the allegation is true or false. There is insufficient evidence to prove or disprove the allegation.
  (b) Unfounded: It is more likely than not that the allegation, although made in good faith, is false. A finding that the allegations are unfounded does not indicate that the complaint was improper or knowingly false.
- No person shall make an allegation that he or she knows to be untrue or knowingly provide false information during an investigation. Making a false complaint or providing false information is a violation of this Policy and may be grounds for discipline, including expulsion or termination. Evidence of false complaints or false information shall be referred to the Title IX Coordinator.
- The report may also include recommendations for actions to resolve the complaint, including, but not limited to, educational programs, counseling/coaching, mediation, remedies for the complainant, and a referral to disciplinary procedures, as appropriate.
- The report may be used as evidence in other related procedures, such as subsequent complaints, grievances, and/or disciplinary actions.
- The complainant and the respondent shall be informed in writing of the completion of the investigation and its outcome. The complainant shall be informed of the findings and of any actions taken or recommended to resolve the complaint that are directly related to the complainant, such as a recommendation that the accused not contact the complainant. The complainant may be notified generally that the matter has been referred for disciplinary action, but shall not be informed of the details of the recommended disciplinary action without the consent of the respondent. The respondent shall be informed of the findings and of actions taken or recommended to resolve the complaint, and shall be notified generally of referrals for disciplinary action and of recommended disciplinary action.
- Complainant and respondent(s) may request a copy of the investigative report pursuant to school policy governing privacy and access to personal information and to Paragraph B below.
- Copies of the investigative report will be provided to the school administrators, academic leaders, and supervisors who are directly responsible for implementing measures to correct and prevent discriminatory or harassing conditions.
- Regardless of the method of resolution or the outcome, Complainant is free at all times to file a complaint with the Equal Employment Opportunity Commission, the individual state Civil Rights Commission, the United States Department of Education (Office for Civil Rights), or the United States Department of Labor (Office of Federal Contract Compliance Programs), or to consult a labor/employment attorney at her or his own expense.

1. Privacy
   CURE shall protect the privacy of individuals involved in a report of discrimination or sexual misconduct to the extent permitted by state and federal law and school policy. A report of discrimination or sexual misconduct may result in the collection of extremely sensitive information about individuals in the school community. The school may be required to disclose personal information in accordance with state or federal law.
   a. Confidentiality of Reports of Discrimination or Sexual Misconduct
      The Title IX Coordinator seeks to balance the parties' privacy needs with the institution's responsibility to ensure a safe educational environment and workplace. Confidentiality is an aspiration but is not always possible or appropriate. An individual's requests regarding the confidentiality of reports of discrimination or sexual misconduct will be considered when determining an appropriate response; however, such requests will be evaluated in the dual contexts of the school's legal obligation to ensure a working and learning environment free from discrimination or sexual misconduct and the due process rights of the accused to be informed of the allegations and their source. Some level of disclosure may be necessary to ensure a complete and fair investigation.
   b. Confidential Resources. Confidential resources may be available on campus. Because the content of discussions with confidential resources is not reported to an office of record, such discussions do not serve as notice to the school to address the alleged discrimination or sexual misconduct.

2. Annual Reporting
   The office of the Title IX Compliance Coordinator is responsible for maintaining records related to reports of discrimination or sexual misconduct, investigations, and resolutions. Records shall be maintained in accordance with school records policies, generally for six years after the date the complaint is resolved. Records may be retained longer at the discretion of the Title IX Coordinator when the parties have a continuing affiliation with the school. All records pertaining to pending

litigation or a request for records shall be maintained in accordance with instructions from school legal counsel. Requests for information should be directed to the Title IX Coordinator.

CAMPUS SECURITY REPORT/CRIME AWARENESS

The school publishes an annual security report that contains information on policies and programs related to campus security, crimes and emergencies, the prevention of crimes and sexual offenses, drug and alcohol use, campus law enforcement, and access to campus facilities. The annual security report also includes statistics on the occurrence of specified types of crimes on campus, at certain off-campus locations, and on the public property surrounding the campus.

The annual report is published by October 1 each year and includes statistics for the three (3) most recent years. The annual security report is provided to all current students and employees. A copy of the most recent annual security report is available from the Campus Registrar's office or on the CURE website at https://www.cure.edu/consumerinfo and https://www.cure.edu/consumerinfo2.

STUDENT'S RIGHT TO PRIVACY AND ACCESS TO RECORDS PROCEDURE TO INSPECT EDUCATIONAL RECORDS

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their educational records.

1. Each student enrolled at CURE shall have the right to inspect and review the contents of their educational records, including grades, attendance records, and other information. Students are not entitled to inspect and review their parents' financial records. Parental access to a student's records may be allowed without prior consent if the student is a dependent as defined in Section 152 of the Internal Revenue Code of 1986.
2. A student's educational records are defined as files, materials, or documents, including those in electronic format, that contain information directly related to the student and are maintained by the institution, except as provided by law. Access to a student's educational records is afforded to school officials who have a legitimate educational interest in the records. A school official is defined as a person employed or engaged by the school in an administrative, supervisory, academic, or support staff position (including law enforcement unit and health staff); a person or company (including its employees) with whom the school has contracted (such as an attorney, auditor, consultant, or collection agent); a trustee serving on a governing board; or a person assisting another school official in performing his or her task. A school official has a legitimate educational interest if the official needs to review an educational record to fulfill his or her professional responsibility or commitment to the school.
3. Students may request a review of their educational records by submitting a written request to the Campus President. The review will be conducted during regular school hours under appropriate supervision.
4. Students may request that the institution amend any of their educational records if they believe the record contains information that is inaccurate, misleading, or in violation of their privacy rights. The request must be made in writing and delivered to the Campus President or Campus Registrar, including the reason for the request. Grades and course evaluations can be challenged only on the grounds that they are improperly recorded. The instructor or the administrator involved will review the request, and, if necessary, meet with the student and then determine whether to retain, change, or delete the disputed data. If the student requests further review, the Campus President or Campus Registrar will conduct a hearing, giving the student an opportunity to present evidence relevant to the disputed issues. The student will be notified of the final decision. Copies of student challenges and any written documentation regarding the contents of the student's records will be retained as part of the student's permanent record.
5. Directory information is information about a student that the school may release to third parties without the student's consent. CURE has defined directory information as the student's name, address(es), telephone number(s), e-mail address(es), birth date and place, program of study, dates of enrollment, attendance, and graduation, grades, honors and awards, as well as the credential awarded. If a student does not want their directory information released to third parties without their consent, they must submit a written request to the school.
6. The student's written consent is required before personally identifiable information from that student's educational records may be released to a third party, except for the disclosures referenced above, disclosures to accrediting commissions and government agencies, and other disclosures permitted by law.
7. A student who believes that CURE has violated his or her rights regarding the release or access to his or her records may file a complaint with the U.S. Department of Education.

FERPA violations can be reported at the following address:
Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202

Security Guard
A full-time security guard is on duty at all times during building hours.

Security Cameras
There are security cameras throughout the building, monitored by the on-site building superintendent and security personnel. In addition, CURE has security cameras throughout its facility for student and staff safety and protection.

Buddy System
There is no security outside the building. CURE suggests you use a buddy system when walking to your car, the train station, or any other area outside the building.

Fire Alarm System
CURE has a state-of-the-art fire alarm system that is connected to the building's main fire alarm system, which is approved by the White Plains Fire Department.

Fire Evacuation Procedure
During orientation and regularly scheduled fire drills, means of egress and emergency evacuation procedures will be explained. Evacuation routes are posted on the floor plan at each doorway. If students have any questions about evacuation, they should ask their instructor or a CURE staff member.

Completion, Graduation and Transfer-Out Rate Report
The school publishes an annual report detailing the completion, graduation, and transfer rates by program. A copy of the most recent report is available from the Campus Registrar's office or on the CURE website at www.cure.edu/consumerinfo.

CAREER SERVICES

The Career Services Department is a vital part of the student's educational program. Wherever you are on your journey, a career coach and employment advocate is ready to assist you. 20Although employment cannot be guaranteed, the department's purpose is to actively assist graduates in obtaining desirable employment. The Career Services Department assists graduates with a broad range of career planning and advising, including:

- Interviewing skills and follow-up.
- Developing job opportunities through leads and networking.
- Assistance throughout the full hiring cycle starting with resumes and job applications.
- Professional attire.
- How to interview with confidence/mock interviews.

INSPIRING FUTURE LEADERS

Students and employers are at the center of everything we do at CURE. The Career Services Department consists of professionals who continuously strive to enhance the student experience by delivering high-touch, personalized services and resources. From large hospital systems to a variety of healthcare facilities, the Center for Ultrasound Research and Education partners with industry leaders and employers to host virtual and on-campus recruiting events for full-time employment opportunities. CURE has a robust and highly active Career Services Department that employers recognize as a source for recruiting qualified entry-level graduates and continue to contact the Department when job openings occur.

Graduates are strongly encouraged to take advantage of every opportunity to work with the Career Services Department to sharpen their interviewing and presentation skills. Successful employment assistance depends on a mutual, dedicated effort by both the graduate and the Career Services Department. Graduates are also encouraged to aggressively seek employment opportunities on their own, keep records of their contacts, and inform Career Services of these efforts. To gain a competitive edge in an in-demand career, students can participate in personal marketing and branding plans, receive assistance with resume preparation and cover letters, improve interviewing skills through mock interviews and performance evaluations, develop job search strategies, receive negotiation coaching, create social media profiles and web biographies, and have employers contacted on their behalf.

Employment assistance services are available to all students who successfully complete the requirements for graduation in the program and have completed all exit requirements from each department at CURE, including the Academic, Financial Aid, and Student Accounts Departments. Exit clearances will be scheduled by the clinical team once all clinical logs have been received and hours verified to ensure the student has met the attendance requirement of the externship portion of the program. Ultimately, securing employment is the student's responsibility. Potential employers will consider many factors when hiring. These factors include, but are not limited to, a student's attendance, attitude, grades, work background, educational background, personal performance in an interview, and other intangible factors. Employment opportunities may be limited for anyone with a criminal background.

The Center for Ultrasound Research and Education (CURE) does not guarantee or imply any guarantee of employment or of any certain wage or salary as a result of attendance at or graduation from CURE.

Graduates seeking placement must agree to follow the instructions of the Director of Career Services, who can skillfully guide and advise students on strategies to achieve successful employment in the chosen career path. If a graduate fails to keep in contact, fails to update contact information, is unresponsive to calls, emails, and texts, or asks not to be contacted for any reason, the student's permanent record will be marked as "Unavailable for Employment," and the institution will no longer assist the student in seeking employment.

Student placement results are achieved by graduates who:

1. Stay in constant contact with the Career Services Department
2. Actively participates in the job search process, which typically takes several months but may take longer, and puts as much effort into job search preparation and conduct as they did for school.

Students and alumni have continued access to career advising, career management, job search resources and networking opportunities. All graduates have the advantage of scheduled and specific refresher training which is offered on a case-by-case basis and is based on classroom and faculty availability.

12 c COURSE DESCRIPTIONS

COM 100 ENGLISH COMMUNICATION

Lecture Hours: 20 Lab Hours: 0 Prerequisite(s): none

The purpose of this course is to further develop students' communication skills as a foundation for their academic studies in sonography at CURE. This course focuses on communication theory and develops communication skills for personal and professional relationships in interpersonal, group, and public settings. Course content includes practice in the application of the principles of listening, verbal and nonverbal communication and group dynamics.

MAT 100 GENERAL MATH

Lecture Hours: 24 Lab Hours: 0 Prerequisite(s): none

This is an introductory level course directed towards developing the principles, techniques, knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer. In this course students will learn basic math operation and introduction to algebras, including statics necessary to understand the foundations of physics of sound. Students will learn basic metric system used in Diagnostic Medical Sonography.

PAT 100 PATIENT CARE & PROFESSIONALISM

Lecture Hours: 16 Lab Hours: 8 Prerequisite(s): none

This is an introductory level course directed towards developing the principles, techniques, knowledge, and skills of each student necessary to function as a qualified Diagnostic Medical Sonographer. It will provide a solid foundation of patient care knowledge and skills, including the introduction to the field of Diagnostic Medical Sonography and the various aspects of care implemented while the patient is under the direct care of the sonographer. Students will learn how to obtain and interpret basic vital signs, patient evaluation and assessment including the role and the responsibilities of the sonographer during interactions with patients and other healthcare personnel. Students will learn Infection control, patient preparation, surgical asepsis, and sterile technique, including techniques involved in universal precautions of blood and body fluids and the precautions taken following a needle-stick injury. The caring of patients with special needs will also be covered as well as special procedures under the guidance of ultrasound.

LAW 100 MEDICAL LAW & ETHICS IN ALLIED HEALTH

Lecture Hours: 16 Lab Hours: 0 Prerequisite(s): none

This is an introductory level course directed towards developing the principles, techniques, knowledge, and skills of each student necessary to function as a qualified Diagnostic Medical Sonographer. Course material includes HIPAA, physician and sonographer legal liability, practice liability concept of medical ethics and its importance for the practice of medicine, how medical professionals make ethical decisions.

MED 100 MEDICAL TERMINOLOGY

Lecture Hours: 16 Lab Hours: 0 Prerequisite(s): none

This is an introductory level course directed towards developing the principles, techniques, knowledge and skills of

each student necessary to function as a qualified diagnostic medical sonographer in the everyday practice and application of vascular sonography. This course is designed to introduce basic medical terminology for students necessary for establishing a career in healthcare. It will teach the student to analyze a medical term by dividing medical words into their component parts. Students will learn acronyms, eponyms, homonyms and frequently used in diagnostic medical sonography. Students will learn the meaning of basic prefixes and suffixes and the combining form, used in the medical and healthcare field. They will also learn how to use these combining forms, prefixes and suffixes to build medical words and develop the language required to communicate effectively in the medical setting. Word structure, acronyms, eponyms, homonyms, frequently misspelled words and common medical terminology specific to different areas of ultrasound will be studied.

BIO 100 INTRODUCTION TO ANATOMY & PHYSIOLOGY

Lecture Hours: 16 Lab Hours: 0 Prerequisite(s): none

This is an introductory level course directed towards developing the principles, techniques, knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer. This course will introduce students to physiology and anatomy of the human body. Student will learn different Structures of the human body, including cells, tissues, organs and system including their function. Human anatomy cross-sectional planes will be learned (long axis, transverse, coronal and oblique planes).

DMS 100 ULTRASOUND PHYSICS & INSTRUMENTATION

Lecture Hours: 96 Lab Hours: 24

Prerequisite(s): English, Math, Patient Care, Medical Law & ethics.

This is an introductory level course directed towards developing the principles, techniques, knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer. This course will introduce students to the fundamental knowledge of acoustic physics, ultrasound principles, and instrumentation. The students will learn how diagnostic ultrasound works and optimize image acquisition. In addition, they will learn to recognize acoustic artifacts, understand acoustic energy and bio effects while applying the ALARA principle. Students will apply basic concepts of acoustic physics and sound production, sound propagation, interactions of sound with different media, sound parameters and variables. Students will learn transducer composition, display modes, imaging artifacts, doppler effects, and hemodynamics. Quality assurance, quality control and the different methods of recording ultrasound will be explored.

DMS101 INTRODUCTION TO ULTRASOUND IMAGING

Lecture Hours: 4 Lab Hours: 20 Prerequisite(s): none

This is a course directed towards developing the principles, techniques, fundamental knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions, and practical visual aids using campus Lab equipment will be used to identify normal and abnormal anatomy in different planes and angles. Students will learn patient positioning, and different ultrasound protocols, various directional maneuvers they will apply when they scan ultrasound patients. Laboratory results, and the role of different complementary imaging modalities will be discussed.

DMS 200 ABDOMINAL AORTA & IVC/ GREATER VESSELS

Lecture Hours: 20 Lab Hours: 20
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography.
In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different abdominal ultrasound protocols. Laboratory results, and the role of different complementary imaging modalities will be discussed dependence on different pertinent abdominal diseases. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 201 PERITONEUM/RETROPERITONEUM

Lecture Hours: 12 Lab Hours: 28
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different abdominal ultrasound protocols.
Laboratory results, and the role of different complementary imaging modalities will be discussed dependence on pertinent different abdominal diseases. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 202 LIVER

Lecture Hours: 16 Lab Hours: 32
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different abdominal ultrasound protocols. The course material includes liver anatomy, pathology and Sonographic techniques, basic functions and physiology of the liver with all segments and ducts, associated vasculature and interaction with major venous and arterial systems, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms and pathologies for disease processes of liver, discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol for liver sonography, description of the clinical laboratory tests used for evaluating organ function, and understanding of the disease processes which indicate ultrasound evaluation. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 203 GALLBLADDER AND BILIARY

Lecture Hours: 16 Lab Hours: 32
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different medical diagnostic ultrasound protocols. Laboratory results, and the role of different complementary imaging modalities will be discussed dependence on different pertinent abdominal diseases. Course material includes gallbladder and biliary anatomy, pathology and Sonographic techniques, basic functions and physiology of the gallbladder with all regions, including fundus, neck, ducts and biliary, associated vasculature and interaction with major venous and arterial systems, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms of disease pathologies, discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol for gallbladder and biliary sonography, description of the clinical laboratory tests used for evaluating organ function, and understanding of the disease processes which indicate ultrasound evaluation. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 204 SPLEEN

Lecture Hours: 12 Lab Hours: 12
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different medical diagnostic ultrasound protocols. Laboratory results, and the role of different complementary imaging modalities will be discussed dependence on different pertinent abdominal diseases. Course material includes spleen anatomy, pathology and sonographic techniques, basic functions and physiology of the spleen with all borders, surfaces, ligaments, associated vasculature and interaction with major venous and arterial systems, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms of disease pathologies and traumatic events, discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol for spleen sonography, description of the clinical laboratory tests used for evaluating organ function, understanding the disease processes, and traumatic events which indicate ultrasound evaluation. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 205 PANCREAS

Lecture Hours: 16 Lab Hours: 32
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different medical diagnostic ultrasound protocols. Laboratory results, and the role of different complementary imaging modalities will be discussed dependence on different pertinent abdominal diseases. Course material includes pancreas anatomy, pathology and Sonographic techniques, basic physiology of the pancreas with all regions, basic functions of the pancreas, including glandular and hormonal associated vasculature and interaction with major venous and arterial systems, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms of disease pathologies, discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol for pancreas sonography, description of the clinical laboratory tests used for evaluating organ function, understanding of the disease processes which indicate ultrasound evaluation, and ultrasound evaluation of pancreas transplants. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 206 GASTROINTESTINAL

Lecture Hours: 8 Lab Hours: 16
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different medical diagnostic ultrasound protocols. Laboratory results, and the role of different complementary imaging modalities will be discussed dependence on different pertinent abdominal diseases. Course material includes system components, interactions, and sonographic techniques, basic physiology and function of the gastrointestinal tract, basic functions include transportation, digestion, and absorption of nutrients, associated organs include the liver, pancreas and gallbladder, associated vasculature and interaction with major venous and arterial systems, understanding of the influence of hormones, innervation and enzymes, clinical signs and symptoms of disease pathologies, description of the clinical laboratory tests used for evaluating system function, and understanding of the disease processes which indicate ultrasound evaluation. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 207 URINARY/ KIDNEY

Lecture Hours: 16 Lab Hours: 32
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different medical diagnostic ultrasound protocols. Laboratory results, and the role of different complementary imaging modalities will be discussed dependence on different pertinent abdominal diseases. Course material includes urinary system anatomy, pathology and sonographic techniques, basic physiology of the system including kidneys, ureters, bladder, urethra, sphincter muscles and nerves basic functions including urine production and blood pressure regulation, associated vasculature and interaction with major venous and arterial systems, relative anatomy and interaction with other organs and systems, clinical signs and symptoms of disease pathologies discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol for urinary system Sonography description of the clinical laboratory tests used for evaluating organ function, understanding of the disease processes which indicate ultrasound evaluation, description of the peritoneal and retroperitoneal spaces: peri-renal, anterior pararenal space and posterior pararenal space, sonographic techniques used in the peritoneal and retroperitoneal spaces, structures of the system including urinary, circulatory and digestive systems, associated vasculature and interaction with major venous and arterial systems, relative anatomy and interaction with other organs and systems, clinical signs and symptoms of disease pathologies, and discussion of congenital anomalies and anatomic variants. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

PED 100 INTRODUCTION PEDIATRIC ULTRASOUND

Lecture Hours: 8 Lab Hours: 12
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using the CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology in pediatric patients. Students will learn different pediatric ultrasound protocols and the role of different complementary imaging modalities will be discussed dependence on pertinent different pediatric diseases. Emphasis will be placed on academic and laboratory applications within the highly specialized area of pediatric sonography including basic patient care principles and professionalism.

DMS 300 BREAST

Lecture Hours: 24 Lab Hours: 32
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography.
In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different abdominal ultrasound protocols. Laboratory results, and the role of different complementary imaging modalities will be discussed dependence on different pertinent abdominal diseases. Course material includes breast anatomy, pathology and Sonographic techniques, basic functions and physiology of the breast, including both male and female, associated vasculature and interaction with major venous and arterial systems, relative anatomy and other pertinent

and/or adjacent structures, clinical signs and symptoms of disease pathologies, discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol for breast sonography, understanding of the disease processes, and surgical intervention and testing procedures which indicate ultrasound evaluation. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 301 THYROID AND PARATHYROID

Lecture Hours: 24 Lab Hours: 32
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Students will learn patient positioning, and different abdominal ultrasound protocols. Laboratory results, and the role of different complementary imaging modalities will be discussed dependence on different pertinent abdominal diseases. Course material includes thyroid and parathyroid anatomy, pathology and sonographic techniques, basic functions and physiology of the thyroid and parathyroid, including glandular hormone production and physiologic effects, associated vasculature and interaction with major venous and arterial systems, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms of disease pathologies and effects on organs and systems, discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol for thyroid and parathyroid sonography, and understanding of the disease processes, surgical intervention and testing procedures which indicate ultrasound evaluation. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 302 SCROTUM

Lecture Hours: 8 Lab Hours: 8
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Course material includes scrotum anatomy, pathology and sonographic techniques, basic functions and physiology of the scrotum, including testes, and spermatic cord, description of the scrotum structure including layers and subdivisions, associated vasculature and interaction with major venous and arterial systems, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms of disease pathologies, discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol for scrotum sonography, understanding of the disease processes which indicate ultrasound evaluation. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 303 PROSTATE

Lecture Hours: 4 Lab Hours: 8
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles, techniques, fundamental knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of abdomen sonography. In this course lectures, projects, discussions and practical visual aids using The CURE campus Lab equipment will be used to identify normal and abnormal abdominal anatomy and physiology. Course material includes prostate anatomy, pathology and sonographic techniques, basic functions and physiology of the prostate, including glandular activity, description of the scrotum structure including fascia layers and subdivisions, associated vasculature and interaction with major venous and arterial systems, relative anatomy and other pertinent male structures relevant to reproduction, clinical signs and symptoms of disease pathologies, basic scanning techniques and protocol for prostate sonography, understanding of the disease processes, and surgical intervention and testing procedures which indicate ultrasound evaluation. Emphasis will be placed on academic and laboratory applications within the highly specialized area of general abdomen sonography including basic patient care principles and professionalism.

DMS 304 FEMALE PELVIS

Lecture Hours: 24 Lab Hours: 48
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles techniques, knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of obstetrics and gynecology sonography. Part of this course will discuss various aspects of gynecology sonography. The course content includes detailed study of the anatomy and physiology of the uterus, ovaries, vascular and adnexa visible by ultrasound imaging, as well as pathologic states met during transabdominal, transvaginal, and trans-labial ultrasound evaluation of the female pelvic. Student will learn and comprehend the embryologic development, pre-menarchal, menarchal, and postmenopausal female reproductive system essential for the performance of high-quality ultrasound examinations. Student will learn to accurately survey and perform the gynecologic sonograms and will collect a comprehensive and thorough knowledge of the anatomy physiology pathology and the sonographic appearance of the female reproductive system. Student will gain proficiency in the diagnostic ultrasound evaluation of the acute and chronic female pelvis pathologies. Emphasis will be placed on the academic and laboratory applications within the highly specialized area of gynecology sonography including basic patient care principles and professionalism.

DMS 305 OBSTETRICS

Lecture Hours: 32 Lab Hours: 40
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is a course directed towards developing the principles techniques, knowledge, and skills of each student necessary to function as a qualified diagnostic medical sonographer in clinical and diagnostic practice of obstetrics sonography. In this course will discuss various aspect of obstetrics sonography. The course content includes detailed study of the anatomy and physiology of the fetus visible by ultrasound imaging, as well as pathologic states met during transabdominal, transvaginal, and trans-labial ultrasound evaluation of the female pelvic. Students will learn and

comprehend the embryologic development, development of the placenta, the different trimesters that occur in a pregnancy and what you see in each trimester. Student will learn to accurately survey and perform the obstetrics sonograms and will collect a comprehensive and thorough knowledge of the anatomy physiology pathology and the sonographic appearance of the female reproductive system. Students will gain proficiency in the diagnostic ultrasound evaluation for each trimester. They will be able to recognize what is normal anatomy for each trimester and recognize pathology. Emphasis will be placed on academic and laboratory applications within the highly specialized area of obstetrics sonography including basic patient care principles and professionalism.

PED 200 INTRODUCTION TO FETAL ECHOCARDIOGRAPHY

Lecture Hours: 8 Lab Hours: 8
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This introductory level course is directed towards developing the principles, techniques, skills and fundamental knowledge of each student necessary to function as a qualified entry level diagnostic medical cardiac sonographer. It introduces the foundations of diagnostic medical sonography as it pertains to echocardiography images, including medical terminology related to the heart anatomy, physiology and pathology. Students will learn hemodynamic principles and scanning plane orientations (longitudinal, transverse and coronal) related to echocardiography. Emphasis will be placed on the clinical applications of echocardiography, including basic patient care principles, professionalism, clinical signs and symptoms. Scanning protocols and techniques will be presented in a demonstrated lesson in conjunction with laboratory scanning sessions. The academic laboratory and clinical courses are integrated into the program for students to learn and practice different echocardiographic scanning protocols. Interpretation of normal and pathologic echocardiography patterns will be learned including the normal variants, laboratory tests and values. At the end of this curriculum, students will possess knowledge and skills necessary for employment in the healthcare system as cardiac sonographers.

MSK 100 INTRODUCTION TO MUSCULOSKELETAL

Lecture Hours: 8 Lab Hours: 12
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is an introductory level course directed towards developing the principles, techniques, knowledge, and skills of each student necessary to function as a qualified Diagnostic Medical Sonographer. Course material includes concepts and terminology used in joints, tendons, ligaments, and nerves musculoskeletal Sonography as it refers to muscular anatomy, muscle movements and anatomical positioning including flexion, extension, abduction, adduction, pronation, supination, protraction and retraction, exploration of MSK protocols for diagnosis of muscle disorders related to injury and degeneration, techniques related to needle guided aspiration of cysts, fluid collections, abscesses, biopsy, and injections, and deeper exploration into aspects of MSK ultrasound used in physical medicine, rehabilitation, rheumatology and sports medicine. Emphasis will be placed on the academic and laboratory applications within this highly specialized area of sonography including basic patient care professionalism, interpretation of normal and abnormal sonographic patterns and features, pathology, associated clinical laboratory tests and procedures and sessions on basic scanning techniques and musculoskeletal ultrasound protocols.

DMS 400 INTRODUCTION TO VASCULAR SONOGRAPHY

Lecture Hours: 16 Lab Hours: 16
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is an introductory level course directed towards developing the principles, techniques, knowledge and skills of each student necessary to function as a qualified diagnostic medical sonographer in the everyday practice and application of vascular sonography. It introduces the diagnostic foundations of vascular sonography, terminology, abbreviations, scan plane orientations, directional nomenclature, vascular hemodynamic, anatomical relationships, and normal variance and pathologic finding. Emphasis will be placed on the academic and laboratory applications within this highly specialized area of sonography including basic patient care principles of vascular patient, professionalism, interpretation of normal and abnormal sonographic patterns and features, pathology, associated clinical laboratory tests and procedures and sessions on basic scanning techniques and vascular protocols.

DMS 401 EXTRACRANIAL CEREBROVASCULAR

Lecture Hours: 24 Lab Hours: 36
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This is an introductory level course directed towards developing the principles, techniques, knowledge, and skills of each student necessary to function as a qualified Diagnostic Medical Sonographer. Course material includes anatomy, pathology and sonographic techniques, basic functions and physiology of the arterial and vascular structures to head and neck, description of the carotid, subclavian, innominate, vertebral arterial network, description of the subclavian, jugular, vertebral venous network, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms of disease pathologies, discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol, understanding of the disease processes which indicate ultrasound evaluation. Emphasis will be placed on the academic and laboratory applications within this highly specialized area of sonography including basic patient care principles of vascular patient, professionalism, interpretation of normal and abnormal sonographic patterns and features, pathology, associated clinical laboratory tests and procedures and sessions on basic scanning techniques and vascular protocols.

DMS 402 INTRACRANIAL CEREBROVASCULAR

Lecture Hours: 24 Lab Hours: 36
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

Course material includes anatomy, pathology and sonographic techniques, basic functions and physiology of the Circle of Willis, including anterior, terminal, posterior basilar and middle cerebral arteries, description of collateral circulation, associated vasculature and interaction with major venous and arterial systems, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms of pathologies, including infarctions, aneurysms, ischemic injury, discussion of congenital anomalies and anatomic variants, and understanding of the disease processes which indicate ultrasound evaluation. Emphasis will be placed on the academic and laboratory applications within this highly specialized area of sonography including basic patient care principles of vascular patient, professionalism, interpretation of normal and abnormal sonographic patterns and features, pathology, associated clinical laboratory tests and procedures and sessions on basic scanning techniques and vascular protocols.

DMS 403 PERIPHERAL ARTERIAL

Lecture Hours: 16 Lab Hours: 28
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

The course material includes anatomy, pathology and sonographic techniques, basic functions and physiology of the lower arterial networks, description of the lower arterial networks including iliac, femoral, popliteal, tibial, plantar arch and dorsal arteries, description of the upper arterial networks including subclavian, axillary, brachial, radial, ulnar, palmer arch and digital arteries, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms of disease pathologies including atherosclerosis, discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol including duplex, basic scanning techniques and protocol including pulsed volume recording, PPG and ABI, and understanding of the disease processes which indicate ultrasound evaluation. Emphasis will be placed on the academic and laboratory applications within this highly specialized area of sonography including basic patient care principles of vascular patient, professionalism, interpretation of normal and abnormal sonographic patterns and features, pathology, associated clinical laboratory tests and procedures and sessions on basic scanning techniques and vascular protocols.

DMS 404 PERIPHERAL VENOUS

Lecture Hours: 16 Lab Hours: 28
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

Course material includes anatomy, pathology and Sonographic techniques, basic functions and physiology of the lower venous network, both deep and superficial structures, basic functions and physiology of the upper venous network, both deep and superficial structures, description of the lower venous networks, relative anatomy and other pertinent and/or adjacent structures, clinical signs and symptoms of disease pathologies including DVT discussion of congenital anomalies and anatomic variants, basic scanning techniques and protocol including historical mention of plethysmography and uncommon techniques and understanding of the disease processes which indicate ultrasound evaluation. Emphasis will be placed on the academic and laboratory applications within this highly specialized area of sonography including basic patient care principles of vascular patient, professionalism, interpretation of normal and abnormal sonographic patterns and features, pathology, associated clinical laboratory tests and procedures and sessions on basic scanning techniques and vascular protocols.

DMS 405 VISCERAL VASCULAR

Lecture Hours: 16 Lab Hours: 24
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

The course material includes anatomy of the vascular structures of the abdomen, discussion of congenital anomalies and anatomic variants, understanding of the disease processes which indicate ultrasound evaluation Sonographic techniques used in assessment of lesions in the renal arterial and venous systems, ultrasound evaluation of renal transplants, understanding the disease processes which indicate ultrasound evaluation. Emphasis will be placed on the academic and laboratory applications within this highly specialized area of sonography including basic patient care principles of vascular patient, professionalism, interpretation of normal and abnormal sonographic patterns and features, pathology, associated clinical laboratory tests and procedures and sessions on basic scanning techniques and vascular protocols.

DMS 500 ADULT ECHOCARDIOGRAPHY

Lecture Hours: 116 Lab Hours: 176
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This introductory level course is directed towards developing the principles, techniques, skills and fundamental knowledge of each student necessary to function as a qualified entry level diagnostic medical cardiac sonographer.
It introduces the foundations of diagnostic medical sonography as it pertains to echocardiography images, including medical terminology related to the heart anatomy, physiology and pathology. Students will learn hemodynamic principles and scanning plane orientations (longitudinal, transverse and coronal) related to echocardiography. Emphasis will be placed on the clinical applications of echocardiography, including basic patient care principles, professionalism, clinical signs and symptoms. Scanning protocols and techniques will be presented in a demonstrated lesson in conjunction with laboratory scanning sessions. The academic laboratory and clinical courses are integrated into the program for students to learn and practice different echocardiographic scanning protocols. Interpretation of normal and pathologic echocardiography patterns will be learned including the normal variants, laboratory tests and values. At the end of this curriculum, students will possess knowledge and skills necessary for employment in the healthcare system as an entry level echocardiographer sonographer.

PED 300 INTRODUCTION TO PEDIATRIC CARDIOGRAPHY

Lecture Hours: 4 Lab Hours: 0
Prerequisite(s): Physics, Patient Care, Vascular & Adult Echo

This introductory level course is directed towards developing the principles, techniques, skills and fundamental knowledge of each student necessary to function as a qualified entry level diagnostic medical cardiac sonographer. It introduces the foundations of diagnostic medical sonography as it pertains to the echocardiography images, including medical terminology related to the heart anatomy, physiology, and pathology. Students will learn hemodynamic principles and scanning plane orientations (longitudinal, transverse and coronal) related to echocardiography. Emphasis will be placed on the clinical applications of echocardiography, including basic patient care principles, professionalism, clinical signs, and symptoms. Scanning protocols and techniques will be presented in a demonstrated lesson in conjunction with laboratory scanning sessions. The academic laboratory and clinical courses are integrated into the program for students to learn and practice different echocardiographic scanning protocols. Interpretation of normal and pathologic echocardiography patterns will be learned including the normal variants, laboratory tests and values. At the end of this curriculum, students will possess knowledge and skills necessary for employment in the healthcare system as cardiac sonographers.

ICD 100 INTRODUCTION TO CAREER DEVELOPMENT

Lecture Hours: 4 Lab Hours: 20
Prerequisite(s): Intro to Anatomy & Physiology, Patient Care & Law & Ethics.

This course is designed to help students be prepared for the workforce. In this course you will be learning how to create social media accounts to help you market yourself. Students will also be creating your resume that you can always update to send to potential jobs. Along with your cover letter. Students will learn how to dress for the job interview and how an interview might go. There will be role playing to give the students an idea of what to expect. Students will list and/or identify and describe and/or demonstrate the utilization of career, educational, and labor market information resources.

CLE 100 EXTERNSHIP: QUARTER 6

Externship Hours: 300
Prerequisite(s): Completion of all didactic portions of the course work.

Students will be placed at an externship site that is aligned with the registry the student will pursue after the program is completed and is determined by the student's highest level of education. Students will utilize hands on techniques to apply sonographic knowledge and skills in a sonography patient care setting in which students scan protocols that include either General Sonography: Vascular Sonography or Cardiac Sonography. Students will observe and scan patients utilizing protocols learned at CURE as well as adapt to the scanning protocols of the clinical site. The protocols will be of diagnostic quality and students will have supervision from a site supervising ultrasound technologist. Students should be able to obtain a patient history, identify and document pathological findings, prepare a preliminary report, and present findings to the site supervisor/supervising technologist assigned to the student.

CLE 100 EXTERNSHIP: QUARTER 7

Externship Hours: 300
Prerequisite(s): Completion of all didactic portion of the course work and Quarter 6

Students will build on skills obtained in Quarter 6 and demonstrate ongoing proficiency in their scanning ability. The application of sonographic knowledge and skills in a sonography patient care setting in which students scan protocols independently with indirect mentor supervision, develop their pathology recognition skills, and scan more challenging patients. Students gain fluency (quality plus speed) and confidence in their problem-solving abilities while applying good ethical practices. Student skills should be in alignment consistent with requirements of an entry level sonographer.

CLE 100 EXTERNSHIP: QUARTER 8

Externship Hours: 300
Prerequisite(s): Completion of all didactic portion of the course work and Quarter 7

Students continue to build on skills obtained in Quarter 7 and demonstrate ongoing proficiency in their scanning ability. The application of sonographic knowledge and skills in a sonography patient care setting in which students scan protocols independently with indirect mentor supervision, develop their pathology recognition skills, and scan more challenging patients. Students gain fluency (quality plus speed) and confidence in their problem-solving abilities while applying good ethical practices. Student skills should be in alignment consistent with requirements of an entry level sonographer.

The application of sonographic knowledge and skills in a sonography patient care setting in which students scan protocols independently with indirect mentor supervision, develop their pathology recognition skills, and scan more challenging patients. Students gain fluency (quality plus speed) and confidence in their problem-solving abilities while applying good ethical practices. Student skills should be in alignment consistent with requirements of an entry level sonographer. The externship/clinical rotation includes: procedures and techniques in the clinical setting as it related to ultrasound, clinical suite setup and breakdown - employing all sanitary procedures, quality assurance aspects pertaining to the use of the ultrasound machine, patient intake and greeting, explanation of ultrasound tests, patient preparation, protocols and performance of specialized ultrasound studies, identification of both anatomy and functions within normal limits and pathologies, and procedures used in test reporting and logging as it pertains to individual clinical sites.

PROGRAM ADVISORY BOARD

CURE has a Program Advisory Board (PAB) composed of qualified individuals working in the ultrasound field or affiliated with CURE, as well as institutional staff, faculty, and CURE graduates. The Board addresses topics such as CURE's mission, objectives, and curriculum, as well as student, graduate, and employer data. The Board membership is as follows:

Name and Credential	Affiliation	Community of Interest
Rishi Bajaj, M.D. Medical Advisor	Epic Heart and Vascular Care Newburgh, NY	Board Member I Externship Site /Employer
Tom Wall, RDMS, RVT, Clinical Site Supervisor	Holy Name Medical Center Teaneck, NJ	Board Member I Externship Site /Employer (CAAHEP Accredited Institutions)
Wendy Mosley, RDMS Clinical Site Sonographer	Advanced Radiology Stamford, CT	Board Member I Externship Site /Employer (CAAHEP Accredited Institutions)
Richard Lipset, M.D., Director of Radiologists	White Plains Hospital, White Plains, NY	Externship Site /Employer
Marion Hayes, Nurse Practitioner	Epic Heart and Vascular Care Newburgh, NY	Externship Site Supervisor /Employer
Niloufar Samiei, M.D., RDCS, Clinical Site Sonographer	Essen Health, Bronx, NY	Externship Site /Employer

Katheryne Zelaya, RVS, RCS Ultrasound Instructor	CURE, 333 Westchester Ave White Plains, NY	Faculty
Lisandy Lipset RDMS, RVT Ultrasound Instructor	CURE, 333 Westchester Ave White Plains, NY	Faculty
Amanda Murasso, Career Service Liaison (Zoom Conference)	CURE, 333 Westchester Ave White Plains, NY	Career Service Liaison

CURE also invites to its annual meeting faculty, graduates and alumni, members of the community and current students. The participation of the PAC members can vary based on availability.

`SCHOOL RULE AND REGULATIONS
NEW YORK STATE EDUCATION DEPARTMENT DISCLOSURES

TUITION REIMBURSEMENT NYSED

The Tuition Reimbursement Fund is designed to protect the financial interest of students attending proprietary schools. If a school closes while you are in attendance, prior to the completion of your educational program, then you may be eligible for a refund of all tuition expenses that you have paid. If you drop out of school prior to completion and you file a complaint against the school with the State Education Department, you may be eligible to receive a tuition refund if the State Education Department is able to provide factual support that your complaint is valid and to determine that there was a violation of Education Law or the Commissioner's Regulations as specified in Section 126.17 of the Commissioner's Regulations. To file a claim to the Tuition

Reimbursement Fund, you must first file a complaint with the State Education Department at the address included in this pamphlet. The staff of the State Education Department will assist you in the preparation of a tuition reimbursement form.

Student Rights
Schools are required to give this disclosure pamphlet to individuals interested in enrolling in their school.

What is the purpose of this pamphlet?
All prospective and enrolled students in a non-degree granting proprietary school are required to receive this pamphlet. This pamphlet provides an overview of students' rights with regard to filing a complaint against a school and accessing the tuition reimbursement fund if they are a victim of certain violations by the school.

Licensed private career schools, which are licensed by the New York State Education Department, are required to meet very specific standards under the Education Law and Commissioner's Regulations. These standards are designed to help ensure the educational appropriateness of the programs which schools offer. It is important for you to realize that the New York State Education Department's Bureau of Proprietary School Supervision closely monitors and regulates all non-degree granting proprietary schools. The schools are required to have their teachers' meet standards in order to be licensed by the Department. Schools are also required to have their curriculum approved by the New York State Education Department, at minimum, every four years, thereby helping to ensure that all curriculum offered in the schools are educationally sound.

In addition, staff members of the Bureau of Proprietary School Supervision are often in the school buildings monitoring the educational programs being offered. The interest of the New York State Education Department is to ensure that the educational program being offered meets your needs and that your financial investment is protected.
The New York State Education Department's Bureau of Proprietary School Supervision wishes you success in your continued efforts to obtain the necessary skill training in order to secure meaningful employment. In addition, Bureau staff will continue to work with all the schools to help ensure that a quality educational program is provided to you.

Who can file a complaint?
If you are or were a student or an employee of a Licensed Private Career School in the State of New York and you believe that the school or anyone representing the school has acted unlawfully, you have the right to file a complaint with the New York State Education Department.

What can a student or employee complain about?
You may make complaints about the conduct of the school, advertising, standards and methods of instruction, equipment, facilities, qualifications of teaching and management personnel, enrollment agreement, methods of collecting tuition and other charges, school license or registration, school and student records, and private school agents.

How can a student or employee file a complaint?
You should try to resolve your complaint directly with the school unless you believe that the school would penalize you for your complaint. Use the school's internal grievance procedure or discuss your problems with teachers, department heads, or the school director. We suggest that you do so in writing and that you keep copies of all correspondence to the school. However, the school cannot require you to do this before you file a complaint with the New York State Education Department. If you do file a complaint with the Department, please advise the Bureau of any action that you have taken to attempt to resolve your complaint. The steps you must take to file a complaint with the New York State Education Department are:

1. Write to the New York State Education Department at 116 West 32nd Street, 5th Floor, New York, New York 10001, or telephone the Department at (212) 643-4760, requesting an interview for the purpose of filing a written complaint. Bring all relevant documents with you to the interview, including an enrollment agreement, financial aid application, transcripts, etc. An investigator from the Department will meet with you and go through your complaint in detail.
2. If you cannot come for an interview, send a letter or call the office to request a complaint form. You must complete and sign this form and mail it to the office. Please include with it copies of all relevant documents. You should keep the originals. You must file a complaint within two years after the alleged illegal conduct took place. The Bureau cannot investigate any complaint made more than two years after the date of the occurrence.
3. The investigator will attempt to resolve the complaint as quickly as possible and may contact you in the future with follow-up questions. You should provide all the information requested as quickly as possible; delay may affect the investigation of your complaint. When appropriate, the investigator will try to negotiate with the school informally. If the Department determines that violations of law have been committed and the school fails to take satisfactory and appropriate action, then the Department may proceed with formal disciplinary charges.

What is the tuition refund and cancellation policy?
All schools must have a tuition refund and cancellation policy for each program included in the catalog and in the student enrollment agreement. Read and understand the school's policy regarding tuition refund and cancellation before you sign the enrollment agreement. If you do not understand it, or are confused by the school's explanation, get help before you sign. You may ask for assistance from the Department at the address included in this pamphlet.

What should students know about "private school agents?"
Schools for the purpose of recruiting or enrolling students in the school employ Private School Agents; they are not school counselors. Private school agents cannot require a student to pay

a placement or referral fee. Each school agent must be licensed by the New York State Education Department, must have an Agent identification card and must be a salaried employee of the school.

School agents who cannot show an Agent Identification Card are breaking the law if they try to interest students in enrolling in a particular school or group of schools. The name(s) of the agent(s) who enrolled a student must appear on that student's enrollment agreement. Therefore, you should write down the name of the agent who talked to you. Each student will be required to confirm the name(s) of the agent(s) when signing the enrollment agreement. A full refund shall be made to any student recruited by an unlicensed private school agent or even by a licensed agent if there is evidence that the agent made fraudulent or improper claims. To find out if you are eligible to receive a refund, you must follow the complaint procedures included on this page.

What should students know about "grants and guaranteed student loans"?

A grant is awarded to a student based on income eligibility, and it does not need to be repaid (for example, New York State Tuition Assistance Program (TAP) grants or Pell grants provided by the federal government).

Guaranteed student loans are low interest loans provided under the Federal Guaranteed Student Loan Program. The decision to apply for such a loan is yours-- the school cannot require that you apply for a loan. You should understand that if you pay school tuition with money loaned to you from a lender you are responsible for repaying the loan in full, with interest, in accordance with the terms of the loan agreement. A failure to repay the loan can hurt your credit rating and result in legal action against you. Even if you fail to complete your educational program, you are still responsible for repaying all of the money loaned to you. It is your right to select a lender for a guaranteed student loan. The school cannot require you to apply to a particular lender or lending institution. However, the school can recommend a lender, but if it does, the school must also provide you with a statement about your right and ability to obtain a loan from another lender and the insurance premiums charged on these loans. Read and understand all the information and applications for financial aid grants and loans before signing.

Where can students file a complaint, file a claim to the tuition reimbursement fund, or get additional information?

Contact the New York State Education Department at:
New York State Education Department
Bureau of Proprietary School Supervision
116 West 32nd Street, 5th Floor New York, New York 10001

This pamphlet is provided to you by the New York State Education Department (NYSED). The NYSED regulates the operation of Licensed Private Career Schools.

FEDERAL BAN ON INCENTIVE COMPENSATION FOR STUDENT RECRUITING ACTIVITIES FOR THE AWARDING OF FEDERAL FINANCIAL AID

CURE does not offer any incentive compensation in the form of commissions, bonuses, or other direct forms of compensation based on success in securing enrollments or the award of financial aid for its admissions and financial aid personnel and including the use of any third-party vendors in acquiring the same.

Introduction

Section 487 (a)(20) of the Higher Education Act (HEA) prohibits the school from providing incentive compensation to employees or third-party entities for their success in securing student enrollments or the awarding of Title IV Higher Education Act program funds.

What is the reason for the law?

This strict ban on providing incentive compensation for performing these activities is part of a larger set of Program Integrity Rules issued by the Department of Education (DOE) in 2010 with an effective date July 1, 2011. These rules cover a broad array of issues intended to promote integrity in higher education programs by protecting students as consumers and by stemming perceived abuses of Title IV program funds perpetuated by a minority of institutions, mainly for-profit schools and other entities. The rules apply to all Title IV eligible institutions.

What do I need to know about the Incentive Compensation Ban? There are two primary considerations that employees should understand in applying this rule.

1. What compensation is considered to be incentive compensation.
2. Which activities are subject to the ban.

What is considered incentive compensation?

Incentive compensation includes commissions, bonus payments, merit salary adjustments, and promotion decisions. Payments made to recruiters based on student academic performance is considered incentive compensation. Excluded from incentive compensation is a fixed salary or wage. Adjustments to a fixed salary or wage are permitted when adjustments are related to cost of living, length of service, OR for the performance factors identified in this guidance as long as only one salary adjustment a year is made.
Other exclusions from incentive compensation include payments to faculty based on the size of classes taught or on student achievement.

What activities are covered by the ban?

These rules prohibit CURE from providing incentive compensation for only two activities, these are:

1. recruiting or admissions activities related to success in securing student enrollments, and,
2. making decisions regarding the awarding of Title IV HEA program funds in the awarding of financial aid.

Some examples of covered activities for which incentive compensation is prohibited include, but are not limited to:

- recruitment information targeted to individuals,
- recruiting solicitations to individuals,
- contacting prospective students,
- making student enrollment or Title IV aid decisions,
- aiding students in completing enrollment applications, and
- completing financial aid applications on behalf of prospective students.

Examples of activities that are exempt from the ban on incentive compensation as long as the employee is not also engaged in covered activities include:

- advertising or marketing activities that provide program information to the public or groups of potential students,
- collecting contact information, and
- providing student support services after the disbursement of financial aid such as career counseling, tutoring, online course support.

COMPLIANCE GUIDANCE FAQS

Are there any exceptions to the rules?

These rules do not apply to the recruitment of foreign students residing in foreign countries who are not eligible to receive Federal student assistance.

What employees do these rules apply to?

These rules apply to positions performing restricted activities. Certain departments such as Admissions Offices or Financial Aid will have a number of employees subject to the ban since these departments typically perform covered activities. These restrictions may apply to higher-level employees with responsibilities for the covered activities.

Additionally, these rules apply to ANY employee in any department that is directly engaged in recruiting students. Employees may not be compensated based on their success in enrolling students. Special care should be taken when reviewing the performance of employees that may perform recruiting activities as a nominal part of their work to ensure that compensation decisions are not made in relation to the success of these activities in securing student enrollment.

Generally, these rules do not apply to senior level managers and executive employees that are only involved in the development of policy and do not engage in individual student contact related to the restricted activities.

As a supervisor how can I assess the performance and determine salary adjustments for an employee whose responsibilities may include restricted activities?
There are a number of standard evaluative factors that can be used to assess the performance of these employees in relation to the restricted activities, including:

- job knowledge (knowledge of Schools programs, policies and guidance),
- professionalism (providing quality customer service, respecting customer privacy, and demonstrating proper etiquette with students and co-workers),
- analytic ability (ability to troubleshoot and solve problems),
- communication skills (written, verbal),
- use of technology (ability to use available technology available to carry out duties),
- dependability (follow through with customers, punctuality, low absenteeism),
- customer evaluations (feedback from students, parents, co-workers or other individuals/organizations the individual works with), and
- initiative (displays positive attitude).

Can merit raises or bonuses be given to employees performing these restricted activities?

Yes, as long as it is demonstrated through employee evaluations that payments are driven by the assessment of the evaluative factors noted above in relation to the covered activities and not related to success in securing student enrollments or awarding financial aid. Employees with additional duties unrelated to the covered activities may be evaluated on their performance of those additional duties.

What about agreements with third party vendors?

These restrictions extend to payments to third party entities; however, specific rules may apply if a vendor is providing bundled activities that include covered as well as other activities. CURE does not engage with or solicit third party vendors engaged in any recruiting efforts related to the admission of students to the school.

New York State Education Department

Occupational Education Data Survey (OEDS)

Reporting Year 2026 · July 1, 2024 – June 30, 2025

Per 126.19(a)(1), of the New York State Education Department Commissions Regulations require a school to annually report and publish their Occupational Education Data Survey (OEDS).

19 Tuition and Fees Schedules

All amounts shown in the Tuition and Fees Schedules represent tuition and fees as currently approved. However, the Center for Ultrasound Research and Education reserves the right, upon approval by the Executive Board and the appropriate regulatory body and consistent with Board policy, to increase or modify tuition and fees without prior notice, and to make such modifications applicable to students enrolled at the Center for Ultrasound Research and Education at that time as well as to incoming students. In addition, all tuition amounts and fees are subject to change at any time to correct errors.
