Pancreas Protocol

Annotations should match the ones within each image

1. TRV Pancreas – Head/ Body/ Tail

Note:

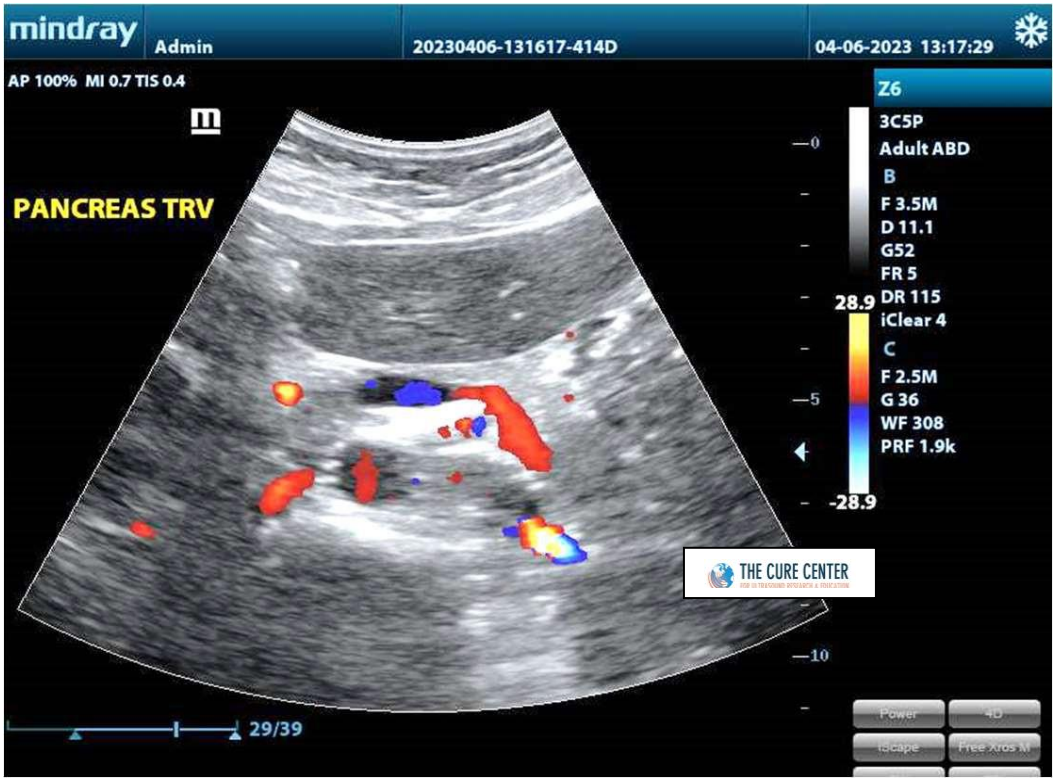

The Transducer's notch should be toward you, with the other edge of the probe up toward the patient's left shoulder to get a full image of the pancreas.

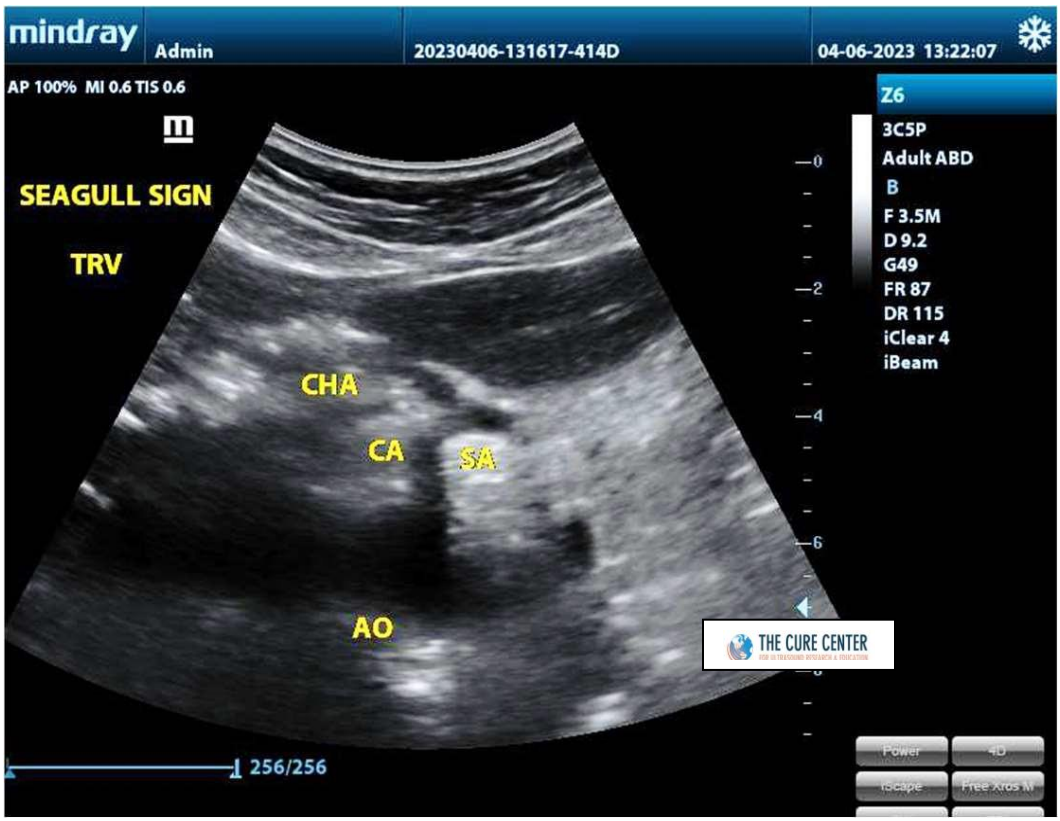

2. TRV Pancreas – Color Doppler Portal/Splenic Confluence

3. TRV Pancreas – Head/ Body/ Tail with Color Doppler

4. TRV Pancreas – Seagull Sign/ Celiac Axis

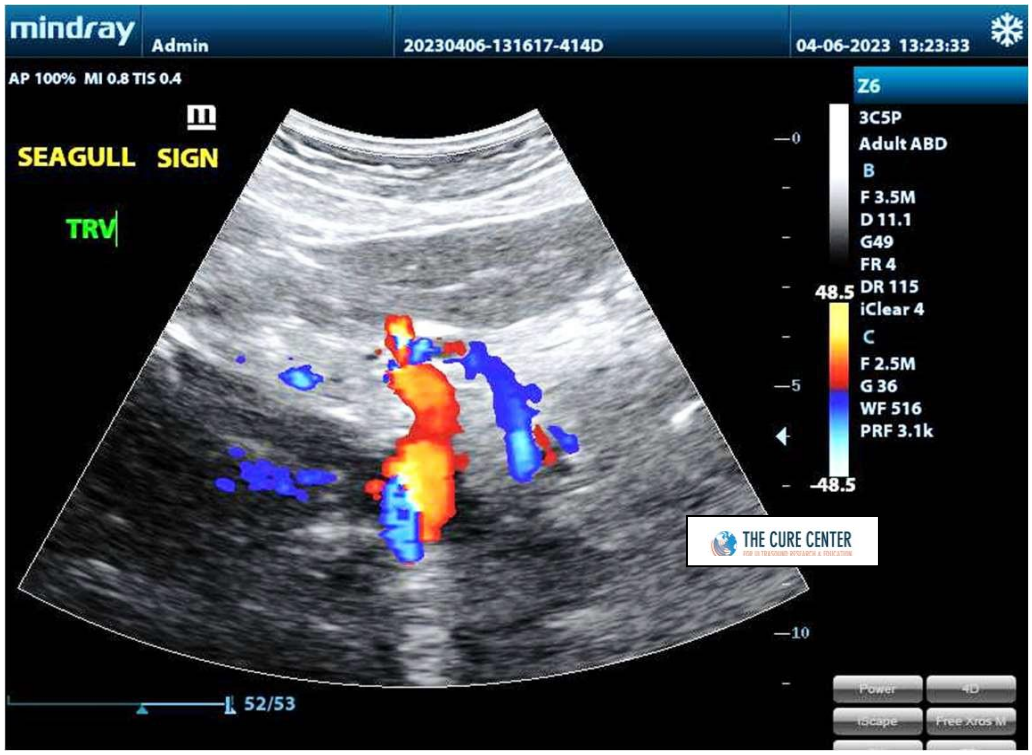

Note:

Notch toward you; angle the whole probe up toward the patient's head.

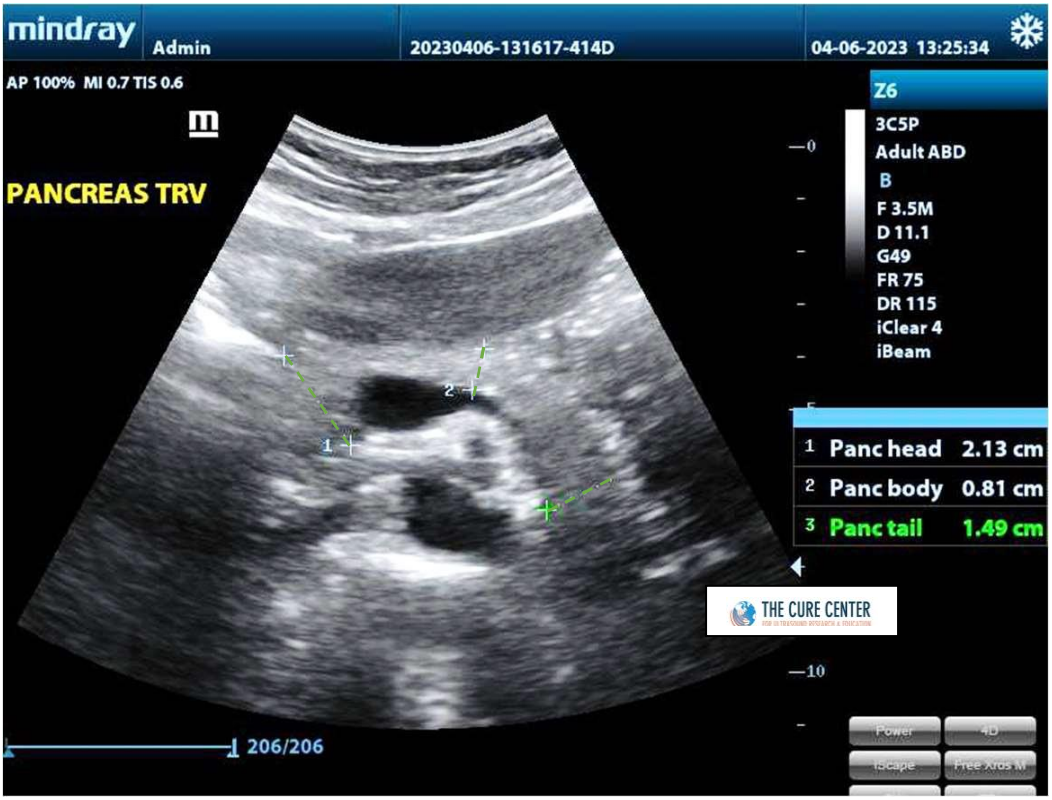

5. TRV Pancreas – Seagull Sign/ Celiac Axis with Color Doppler

Note:

Stay where you are. Notch toward you; angle the whole probe up toward the patient's head.

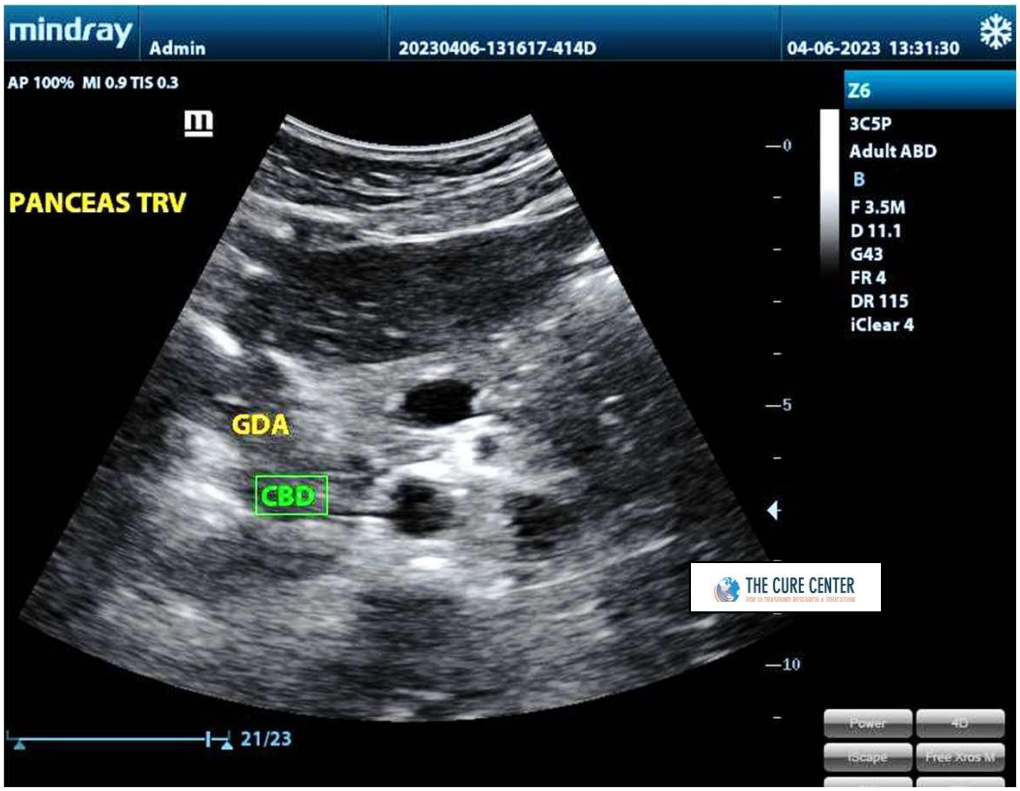

6. TRV Pancreas – Head/ Body/ Tail with Measurements

7. TRV Pancreas – Gastroduodenal Artery/ Common Bile Duct

Note:

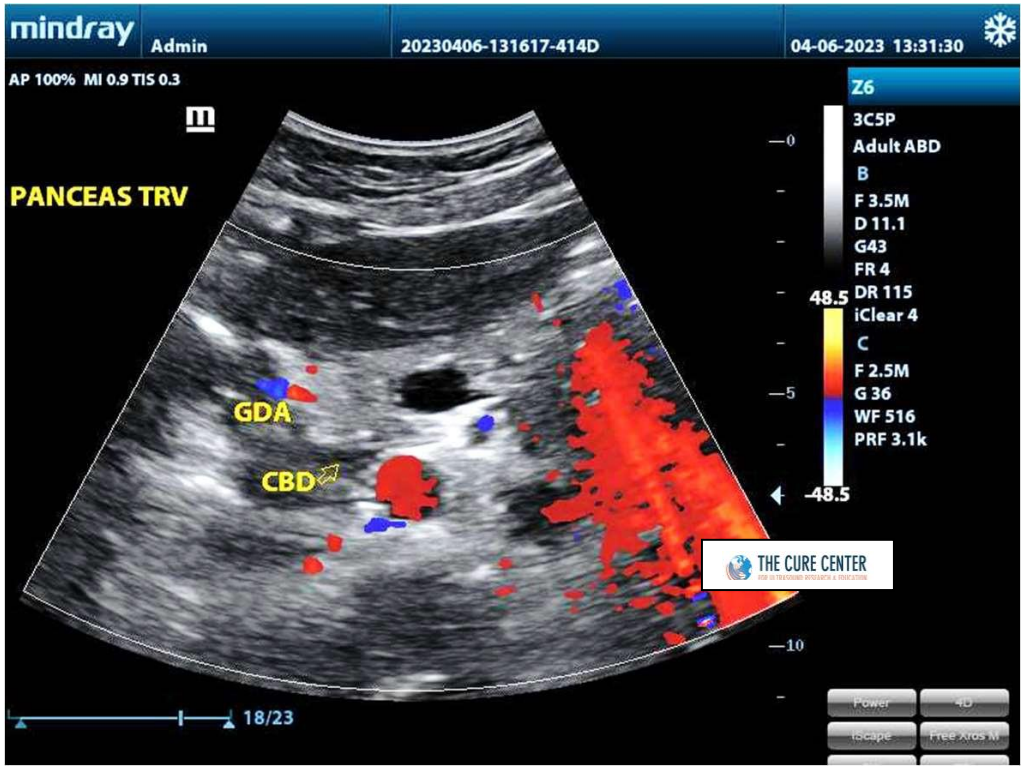

Located in the pancreatic head, GDA (takes color) and CBD (does not take color) are on the top of each other.

8. TRV Pancreas- Color Doppler Gastroduodenal Artery/ Common Bile Duct

Note:

Located in the pancreatic head, GDA (takes color) and CBD (does not take color) are on the top of each other.

9. TRV Pancreas – RRA / LRV/ AO/ IVC/ SV

Note:

RRA-Right Renal Artery
LRV- Left Renal Vein
AO- Aorta
IVC- Inferior Vena Cava
SV- Splenic Vein

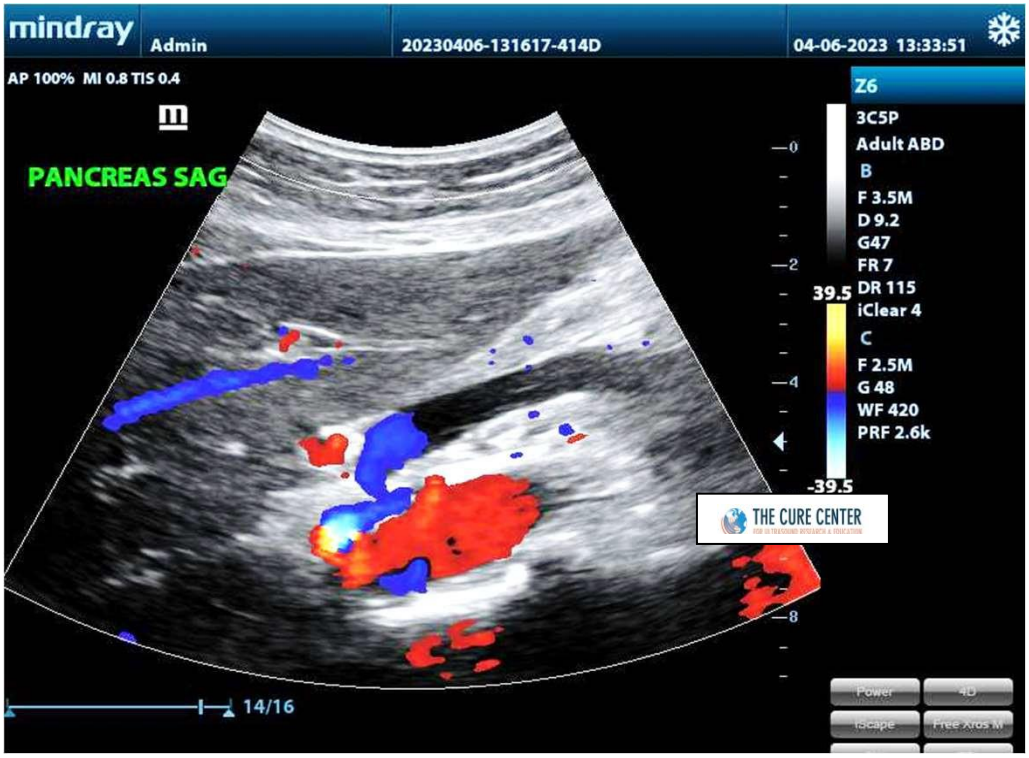

10. SAG Pancreas – Head

Note:

Make sure your PV is elongated; show the head of the pancreas above it. The head of the pancreas is between the liver and PV.

11. SAG Pancreas – Color Doppler

12. Sag Aorta – Show the CA and the SMA

Note: **Online Image**

CA- Celiac Axis
SMA- Superior Mesenteric Artery

13. Sag Aorta – Show the CA and the SMA with Color Doppler

Note: **Online Image**

CA- Celiac Axis
SMA- Superior Mesenteric Artery
