THE CURE CENTER
FOR ULTRASOUND RESEARCH & EDUCATION

Testicular Protocol

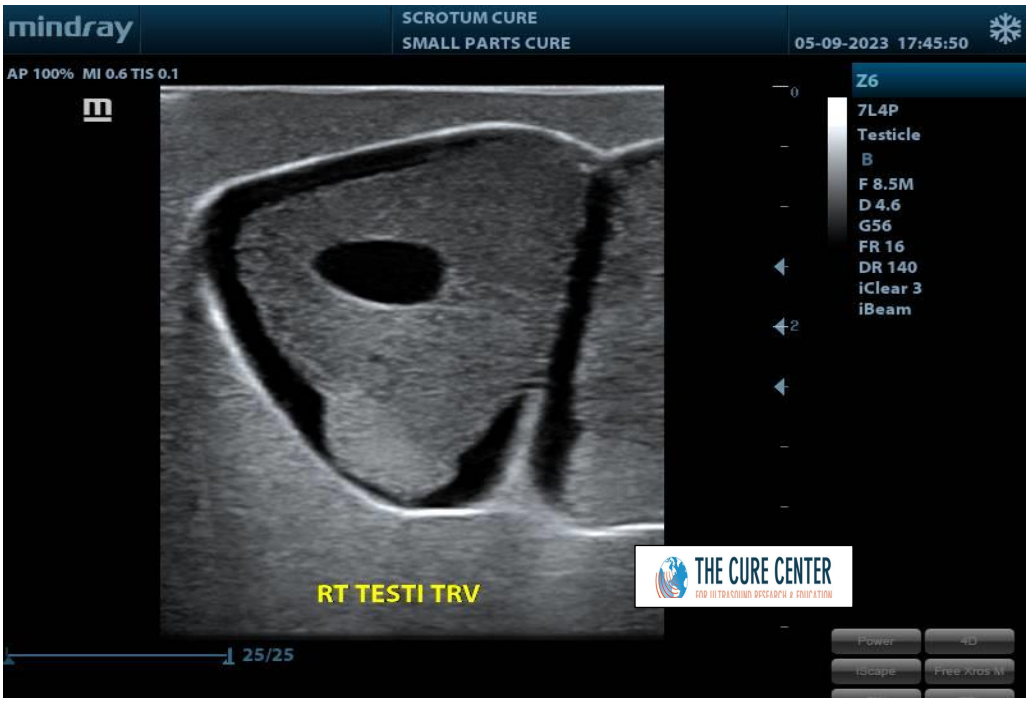

1. Bilateral TRV Testicles

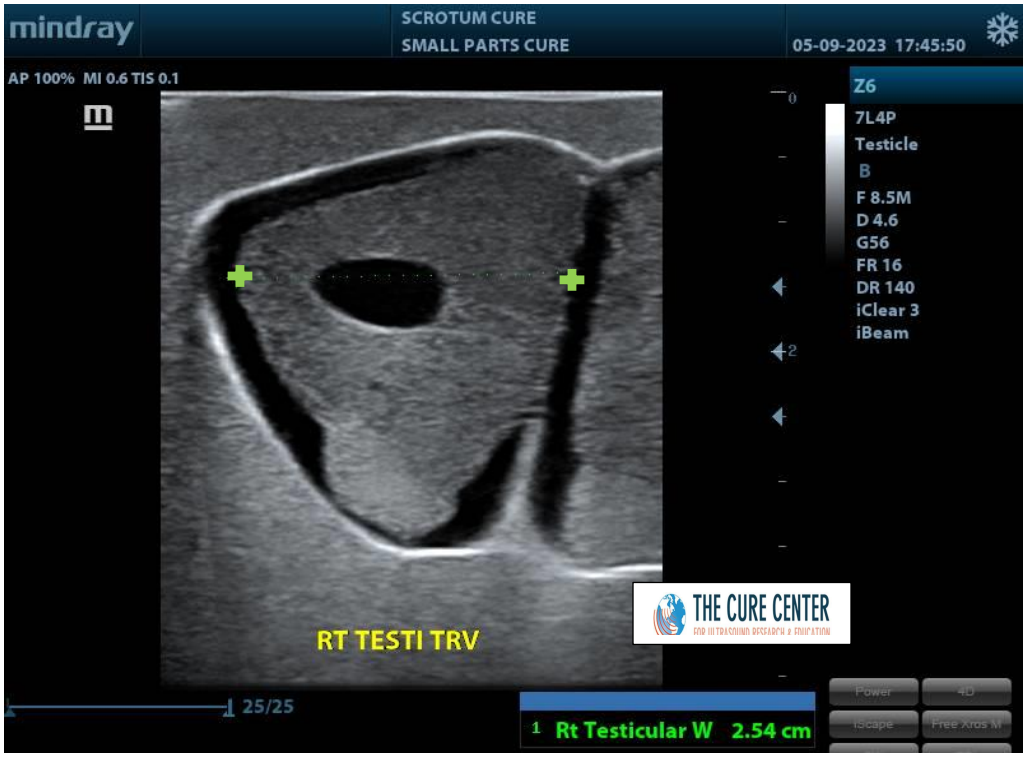

2. Bilateral TRV Testicles with Color

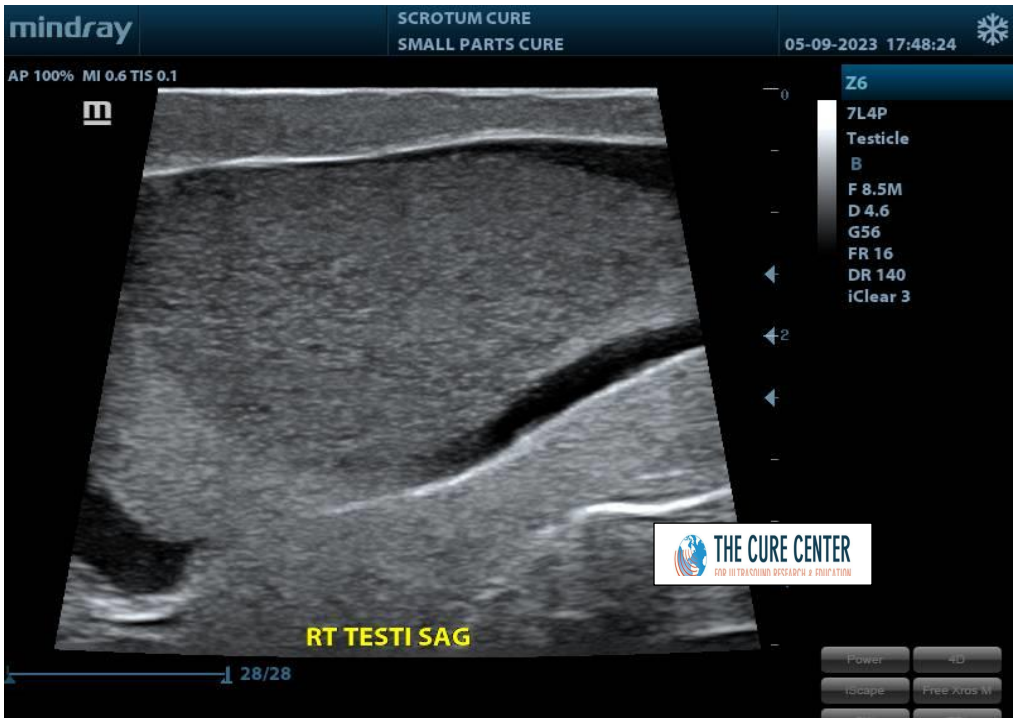

3. Rt Testicule TRV

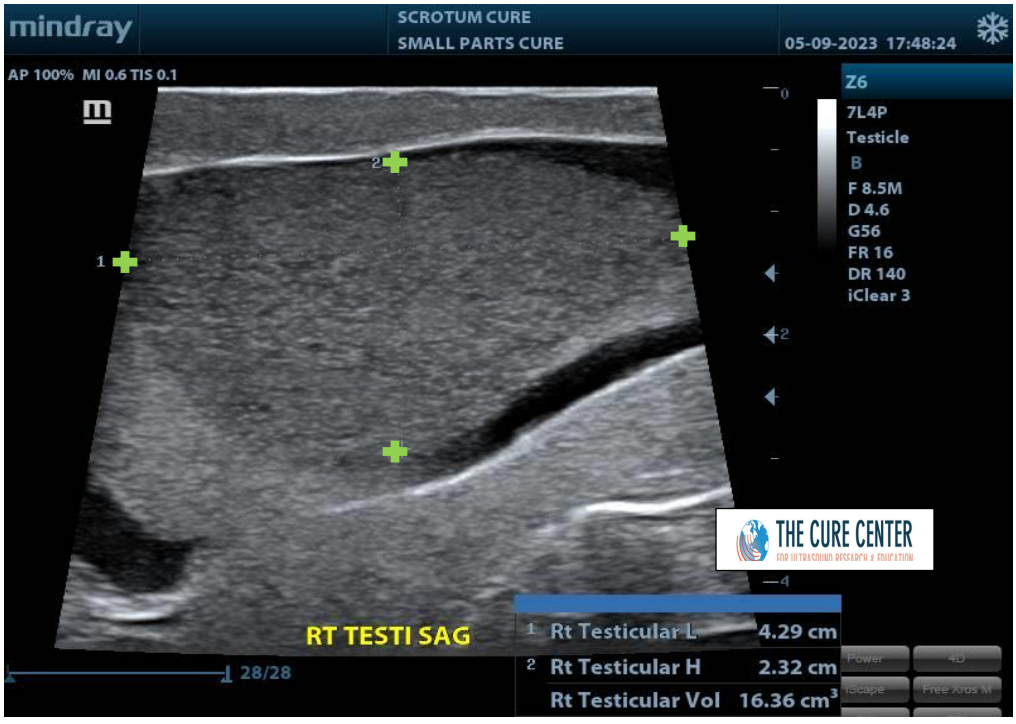

4. Rt Testicule TRV with Measurements

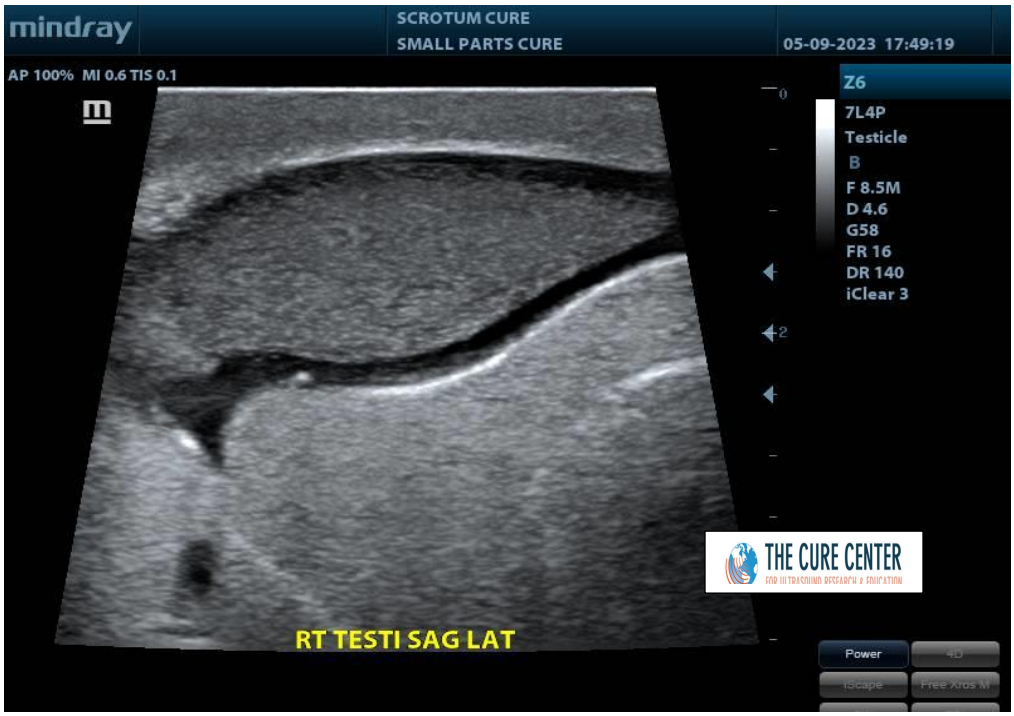

5. Rt Testicule Sag

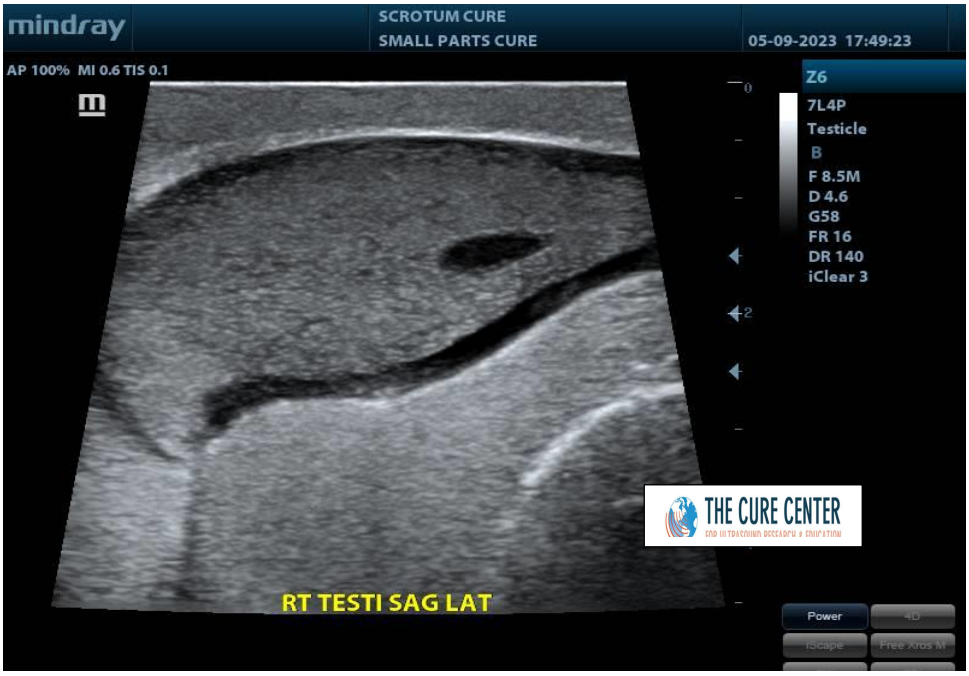

6. Rt Testicle Sag with measurements

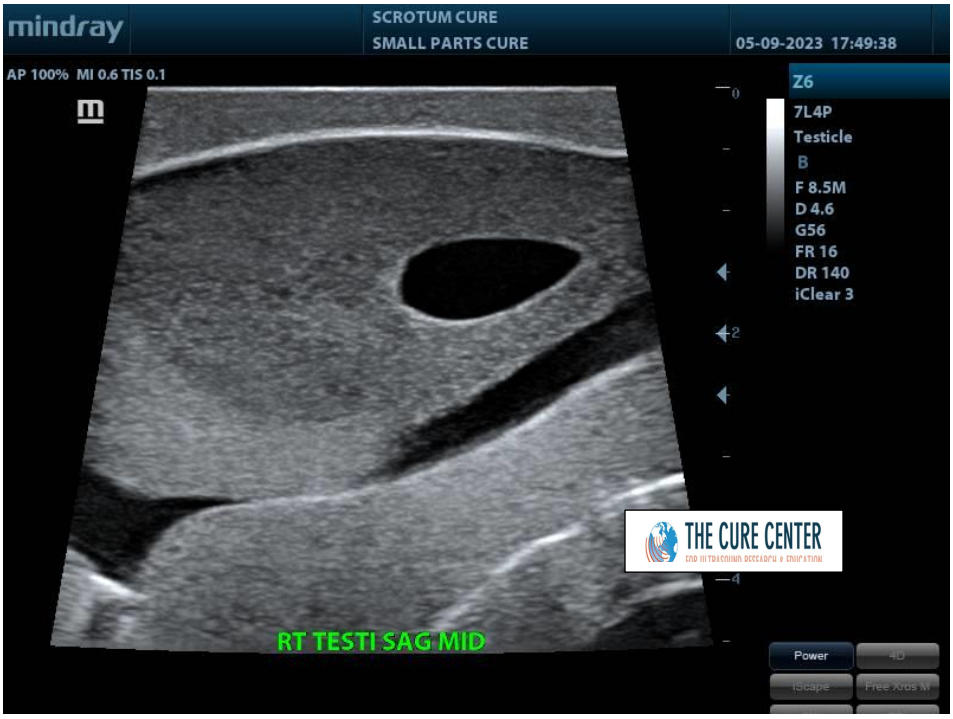

7. Rt Testicle Sag Lateral 1

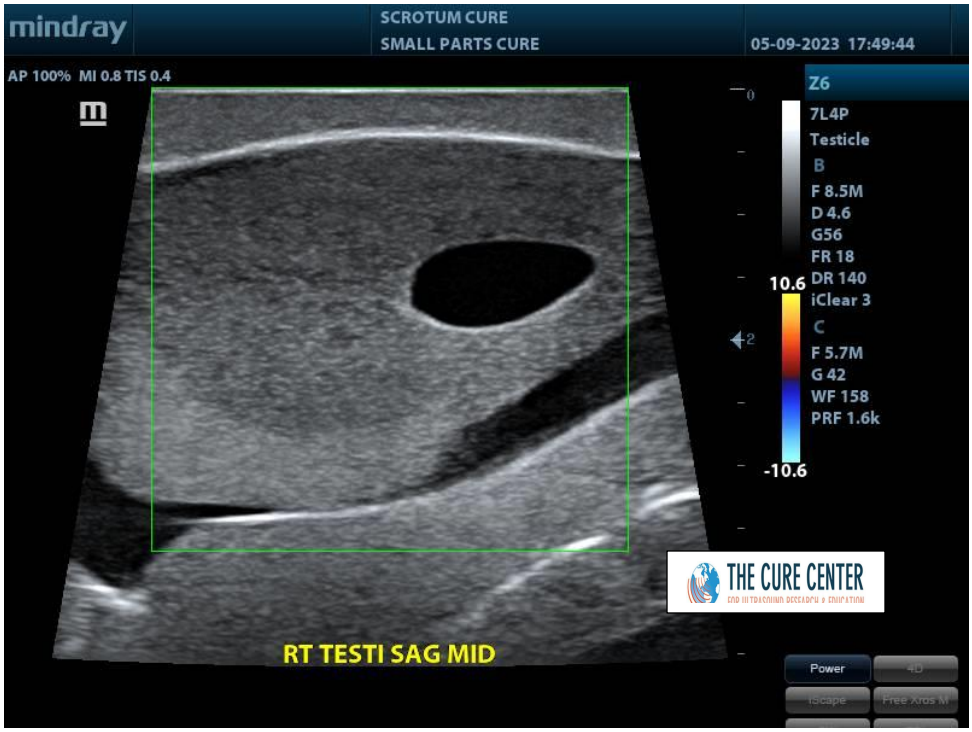

8. Rt Testicle Sag Lateral 2

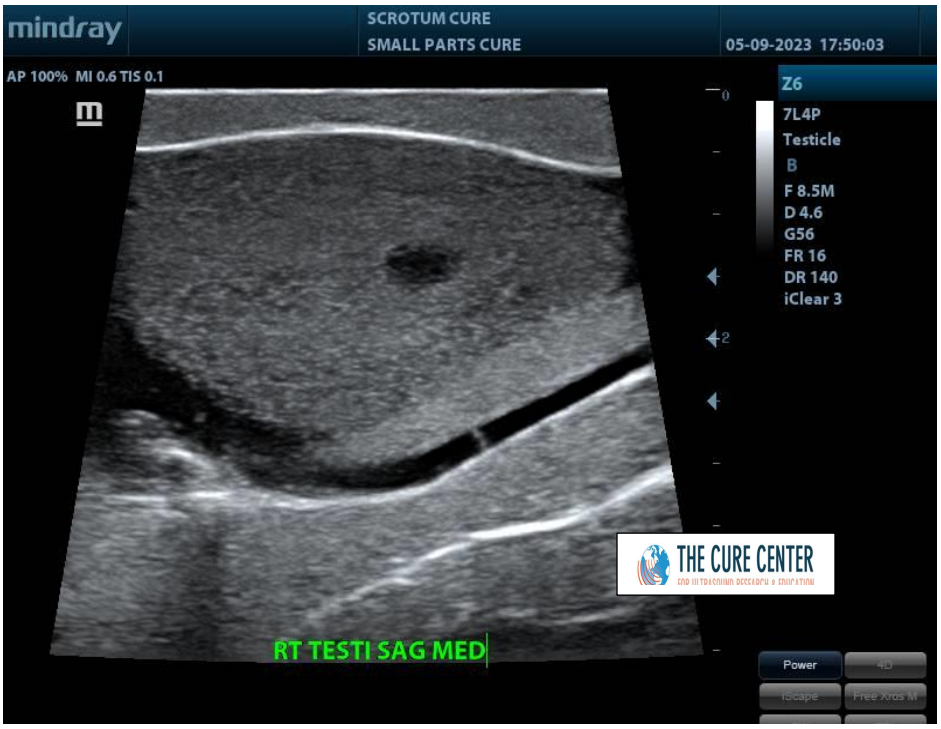

9. Rt Testicle Sag Mid

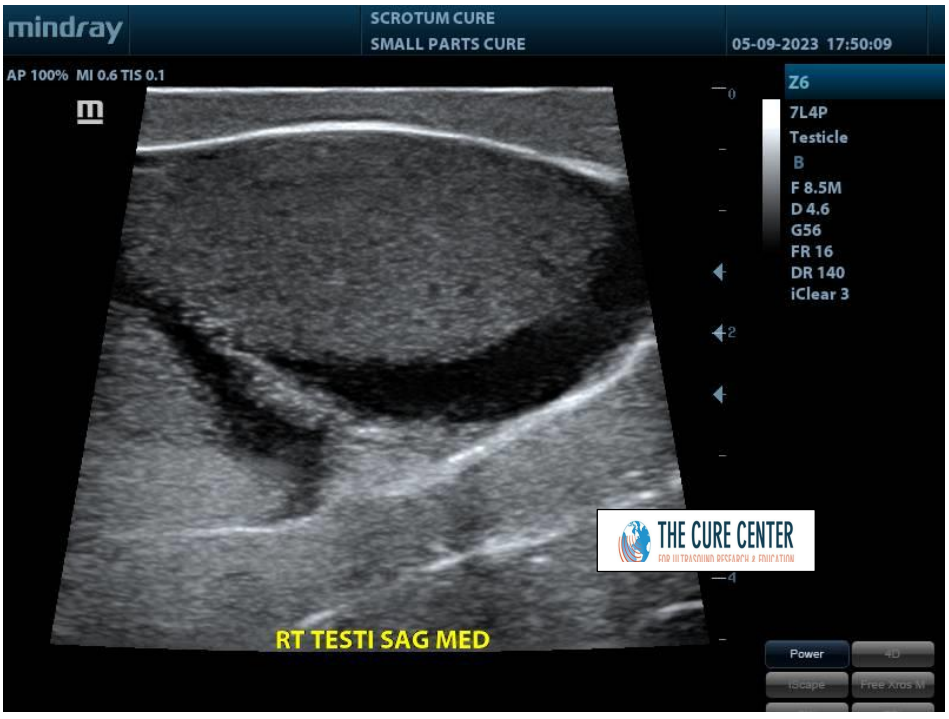

10. Rt Testicle Sag Mid with Color Doppler

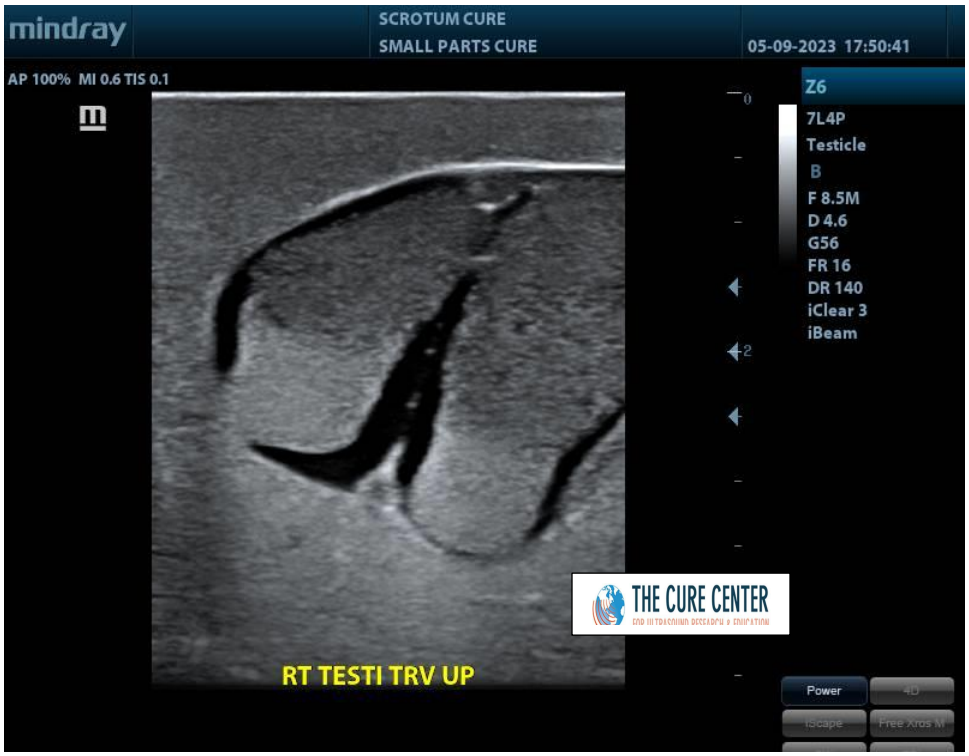

11. Rt Testicle Sag Medial 1

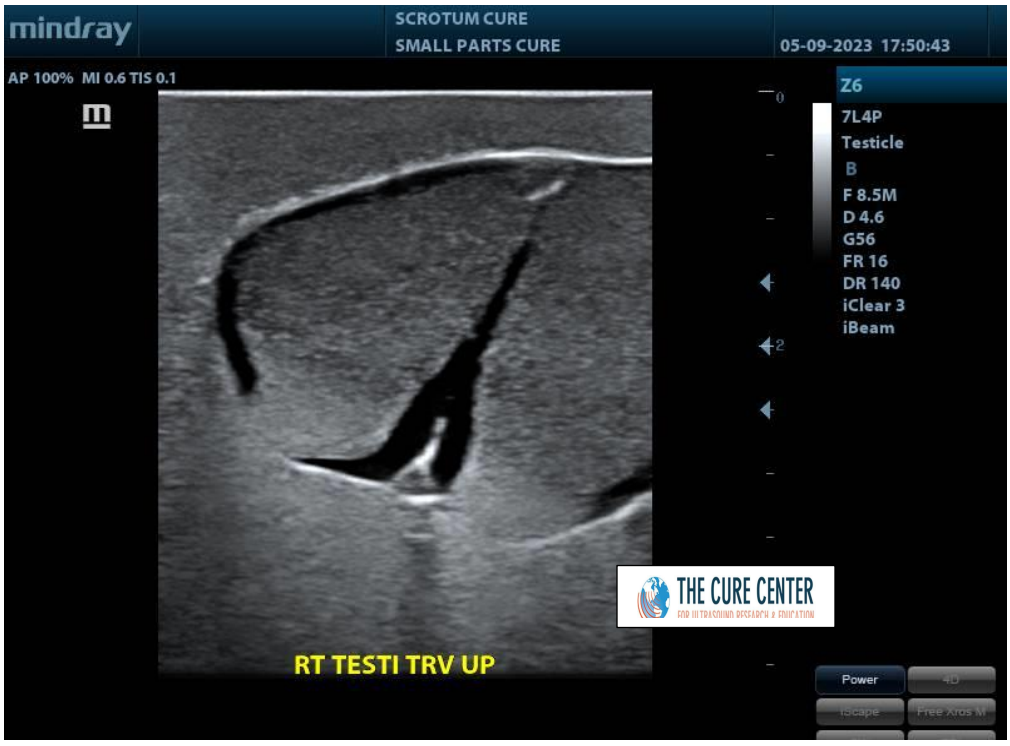

12. Rt Testicle Sag Medial 2

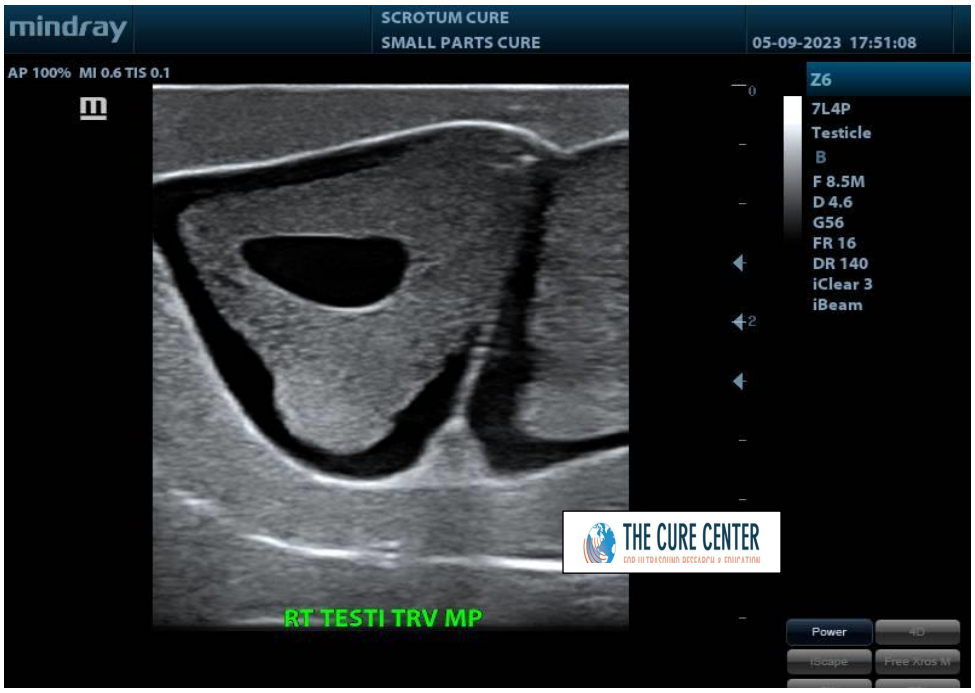

13. Rt Testicle TRV Upper Pole 1

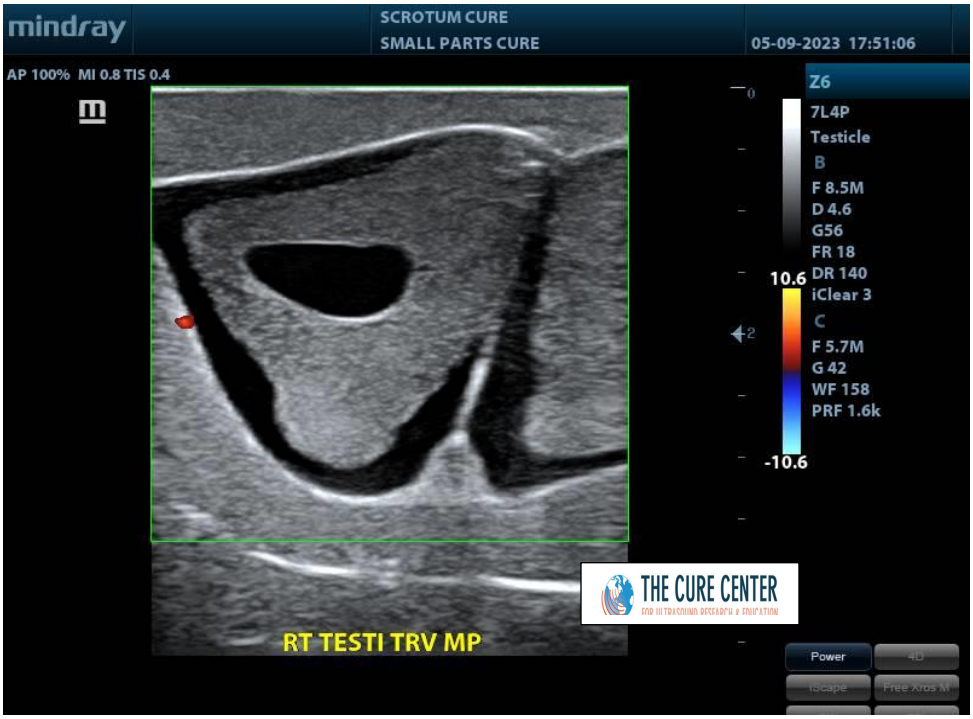

14. Rt Testicle TRV Upper Pole 2

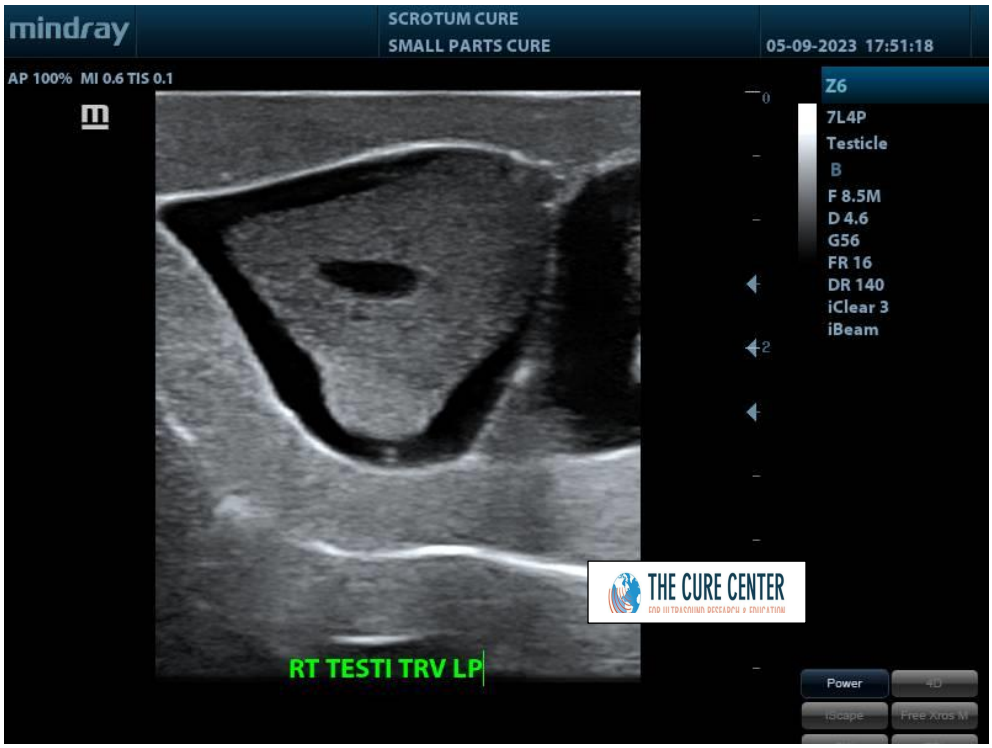

15. Rt Testicle TRV Middle Pole

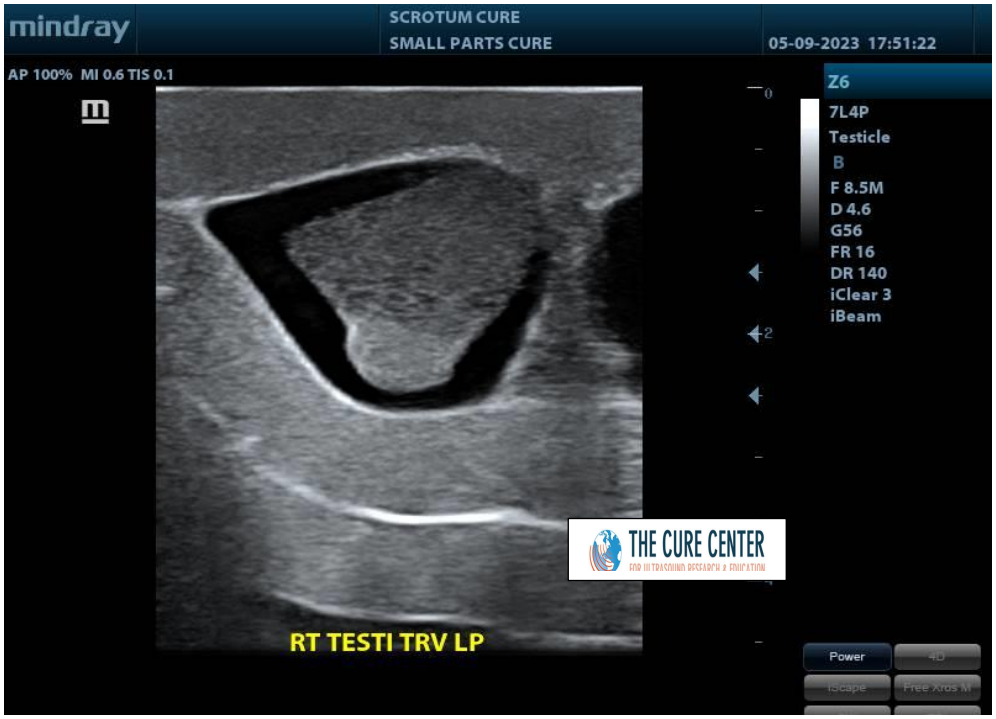

16. Rt Testicle TRV Middle Pole with Color Doppler

17. Rt Testicle TRV Lower Pole 1

18. Rt Testicle TRV Lower Pole 2

19. Rt Testicle TRV With Power Dopper

(To be done when asked to check for testicular torsion)

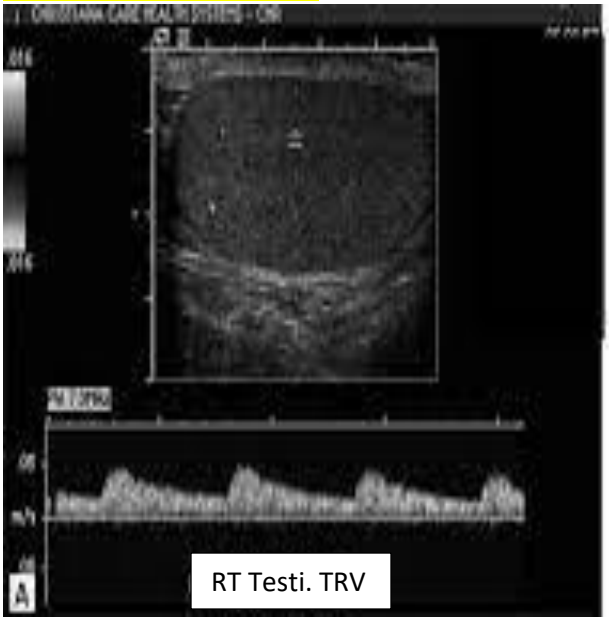

Note: *Phantom* images without waveforms

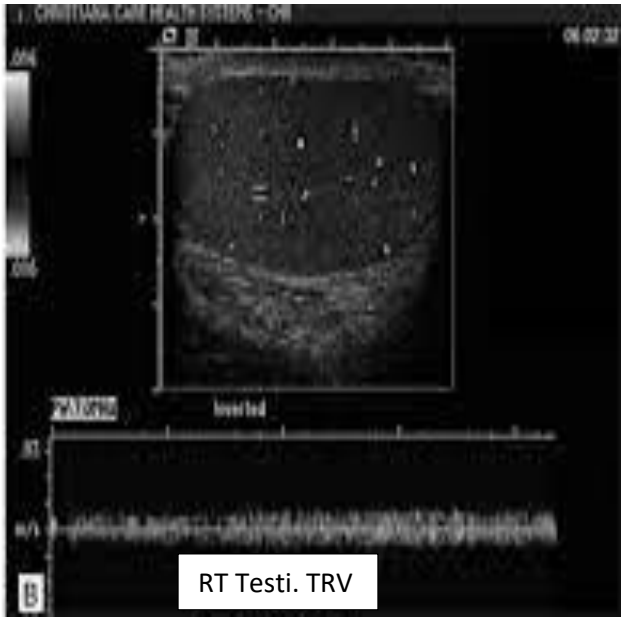

(How real testicles should look like with color, doppler, and waveforms)

Note: Real Testicles with arterial and venous waveforms flow (RT) and (LT)

20. Right Valsalva

Note: Real pampiniform venous plexus. Sweep laterally and posteriorly to get these veins, measure, then add color.

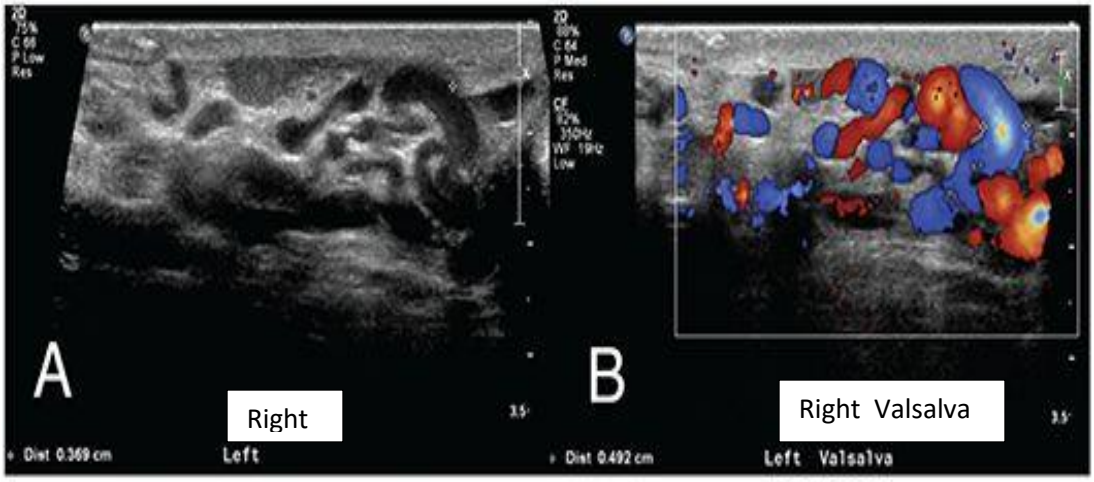

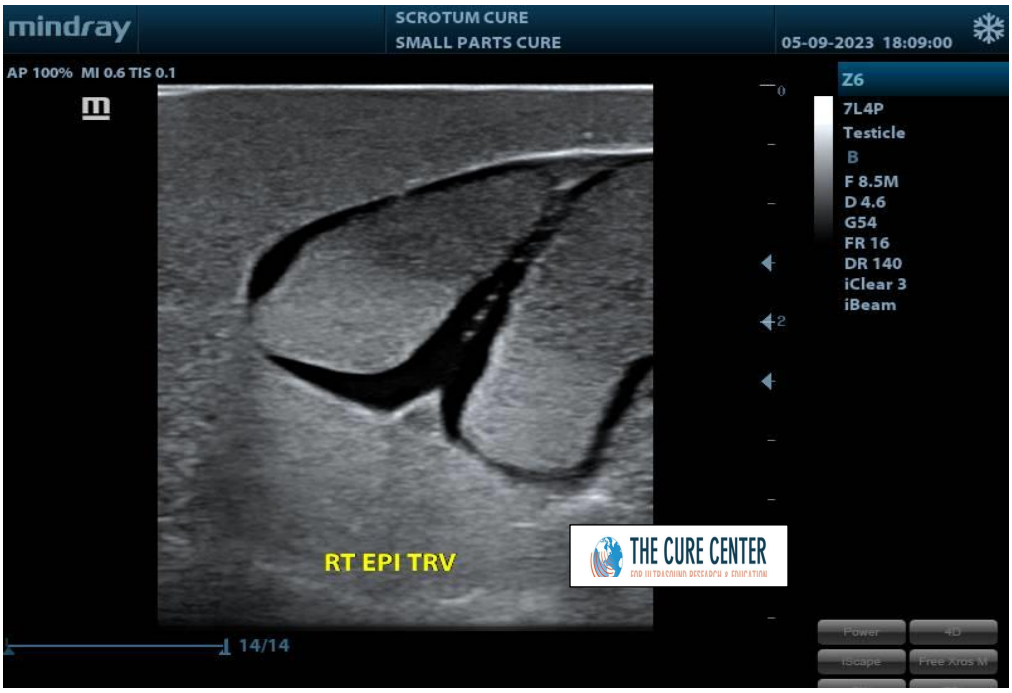

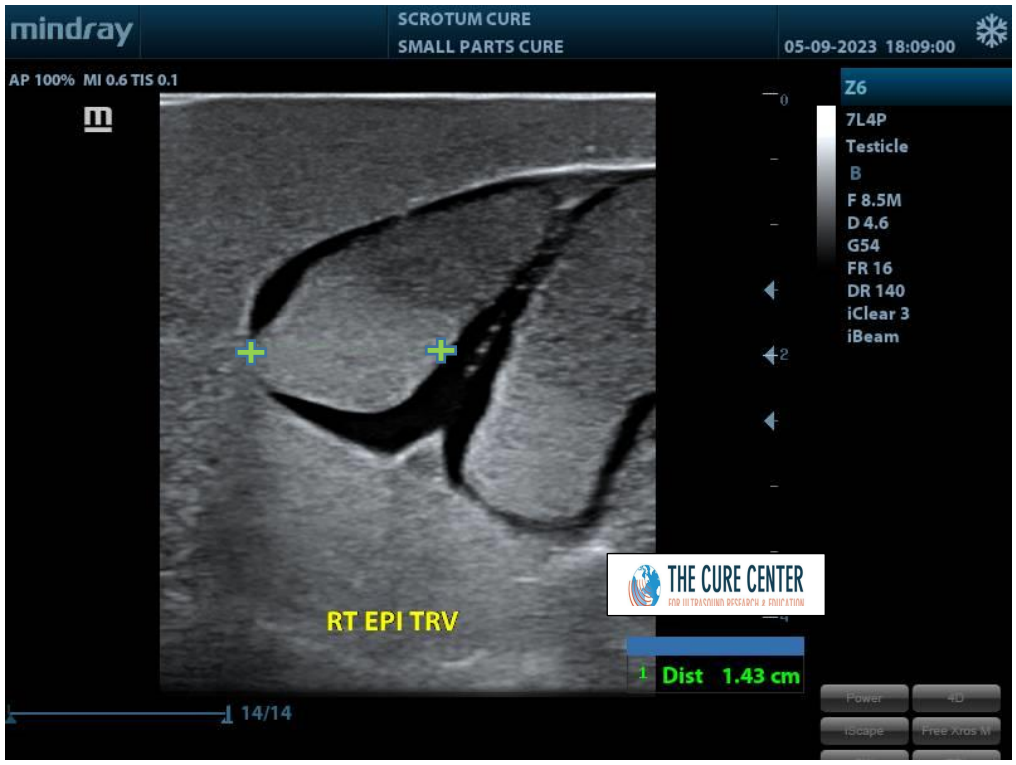

Figure 53.3 **A,B:** Grayscale ultrasound and color Doppler images of the left scrotum showing abnormally dilated and tortuous veins in the left pampiniform plexus. The gray-scale image on the left shows vessels dilated greater than 3 mm. The right image demonstrates significant refluxing vascular flow with Valsalva maneuver, confirming abnormal reflux into the pampiniform plexus.

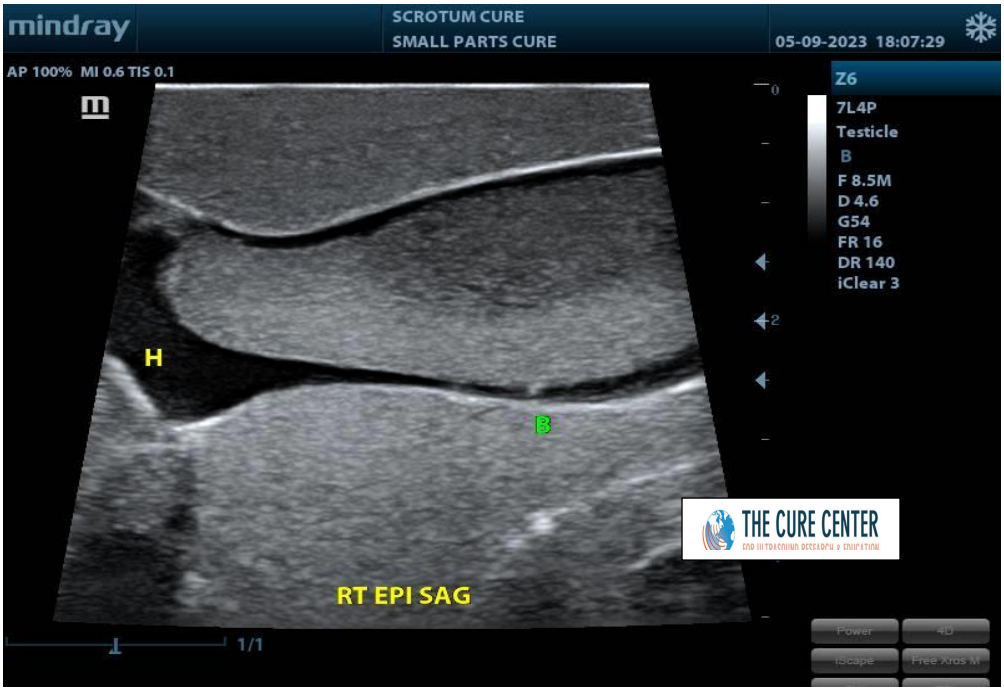

21. Rt Epididymis TRV

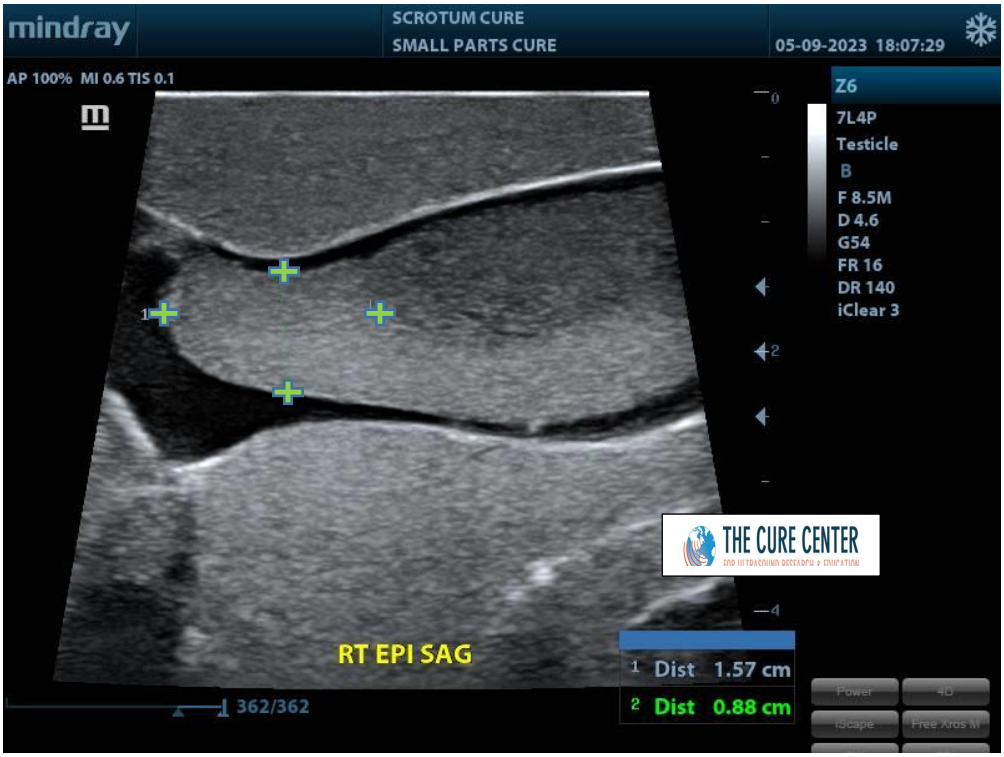

22. Rt Epididymis TRV with Measurements of the Head

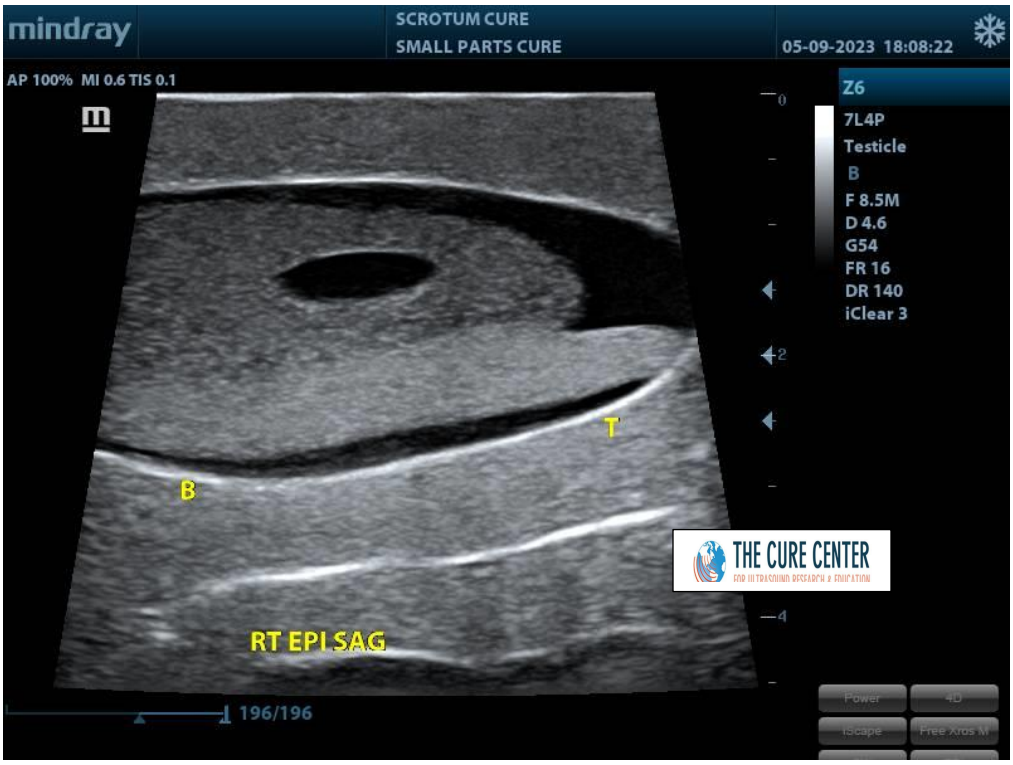

23. Rt Epididymis SAG

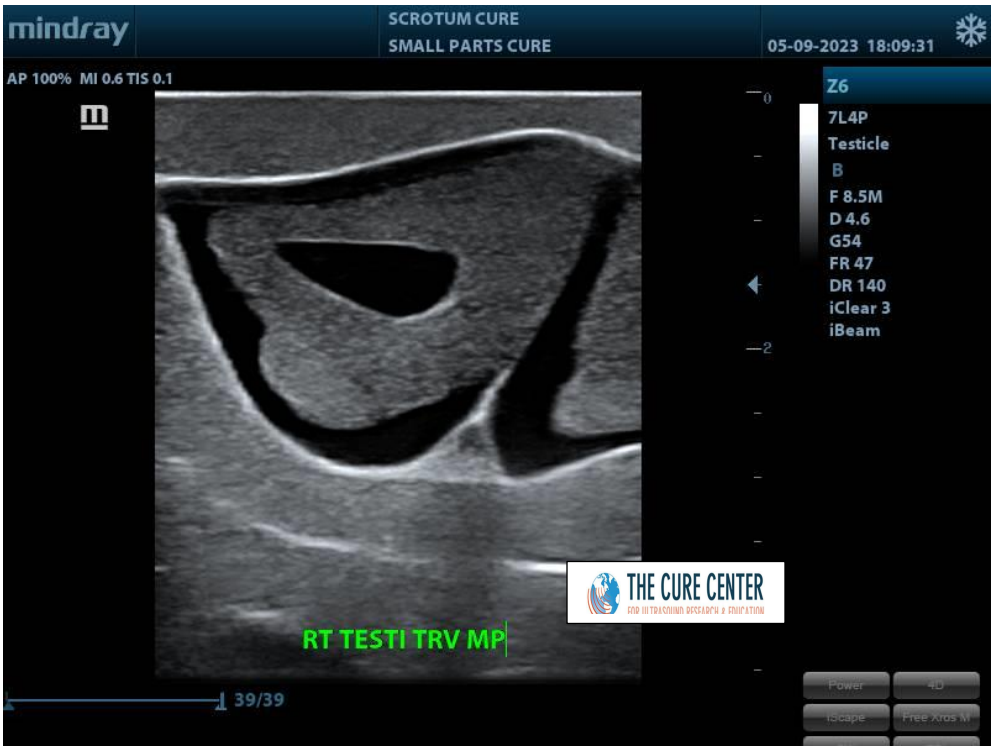

24. Rt Epididymis SAG with Measurement of the Head

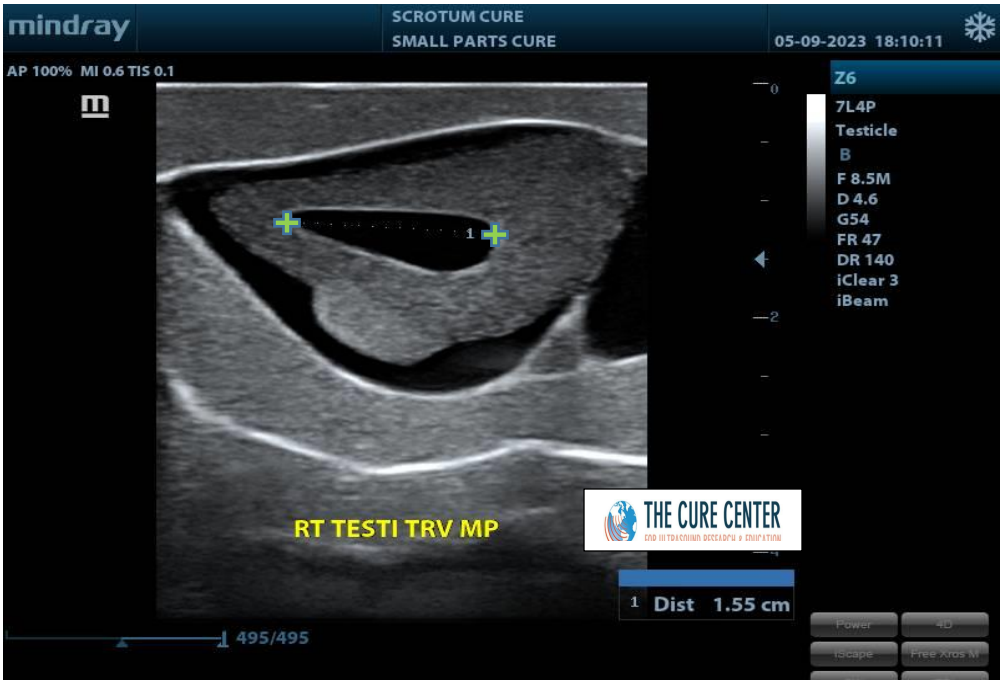

25. Rt Epididymis SAG (show the body and the tail)

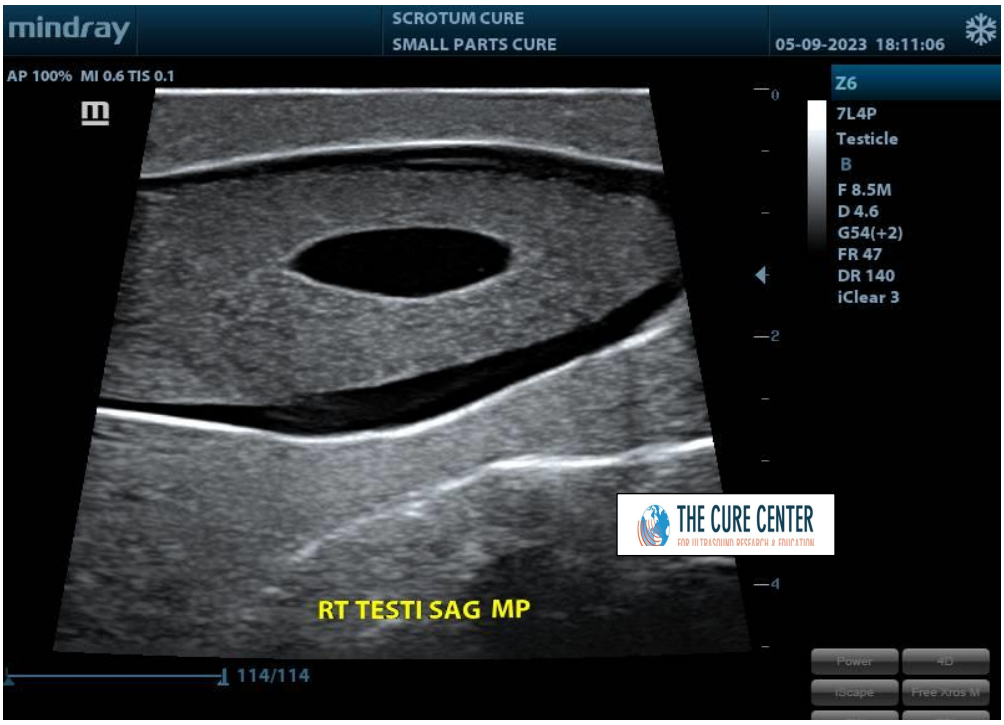

A.Show any abnormality you see in TRV and label it

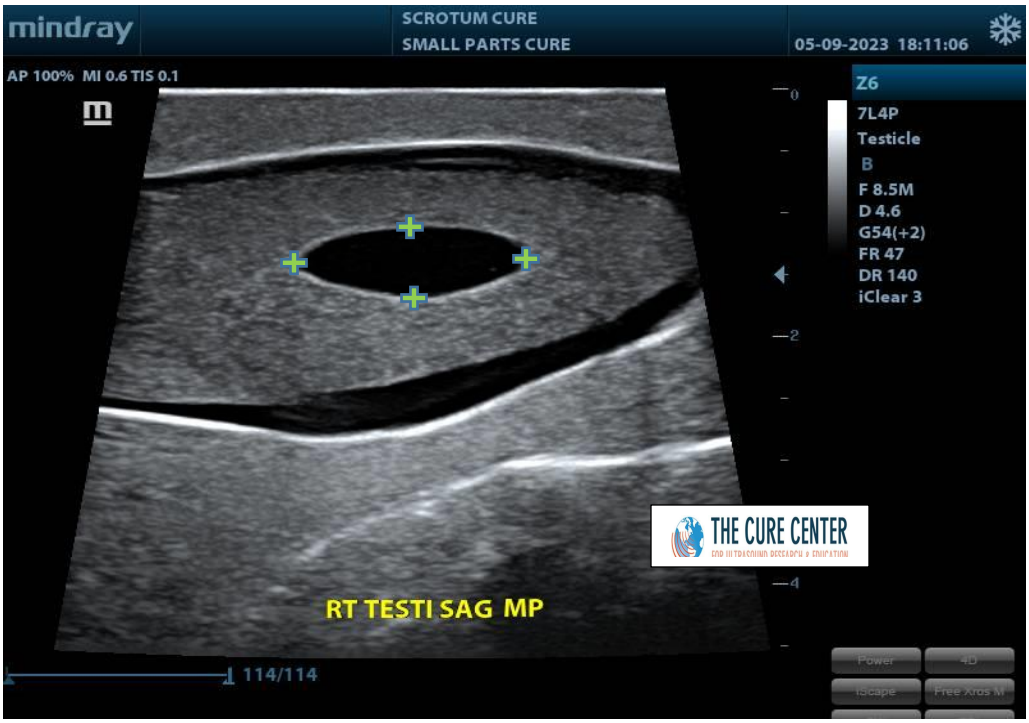

A.Show any abnormality you see in TRV, label it and measure it

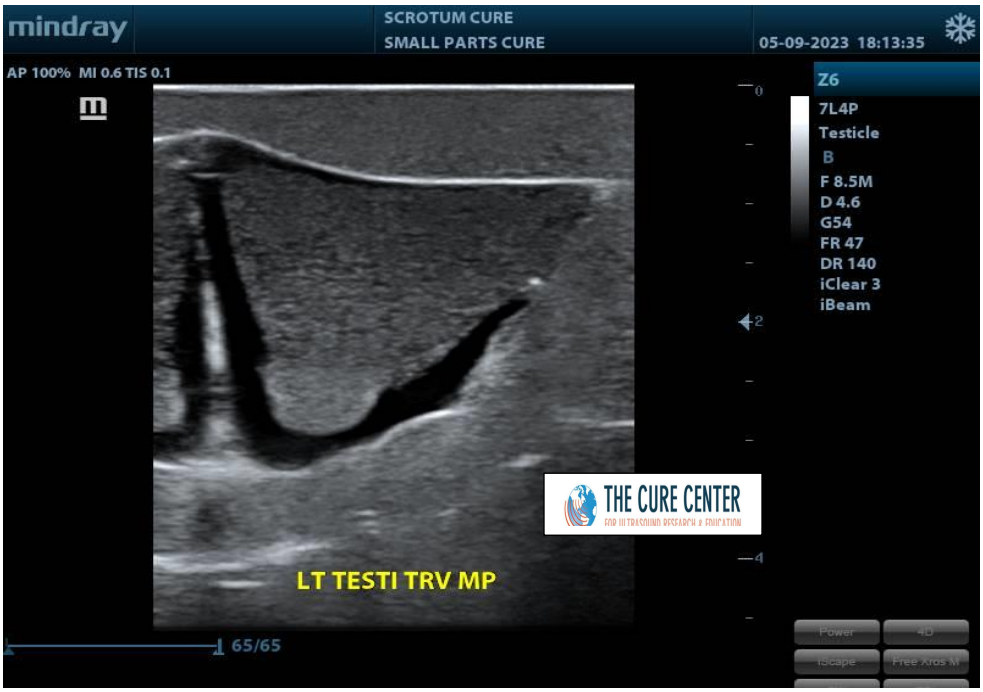

A. Show any abnormality you see in SAG and label it

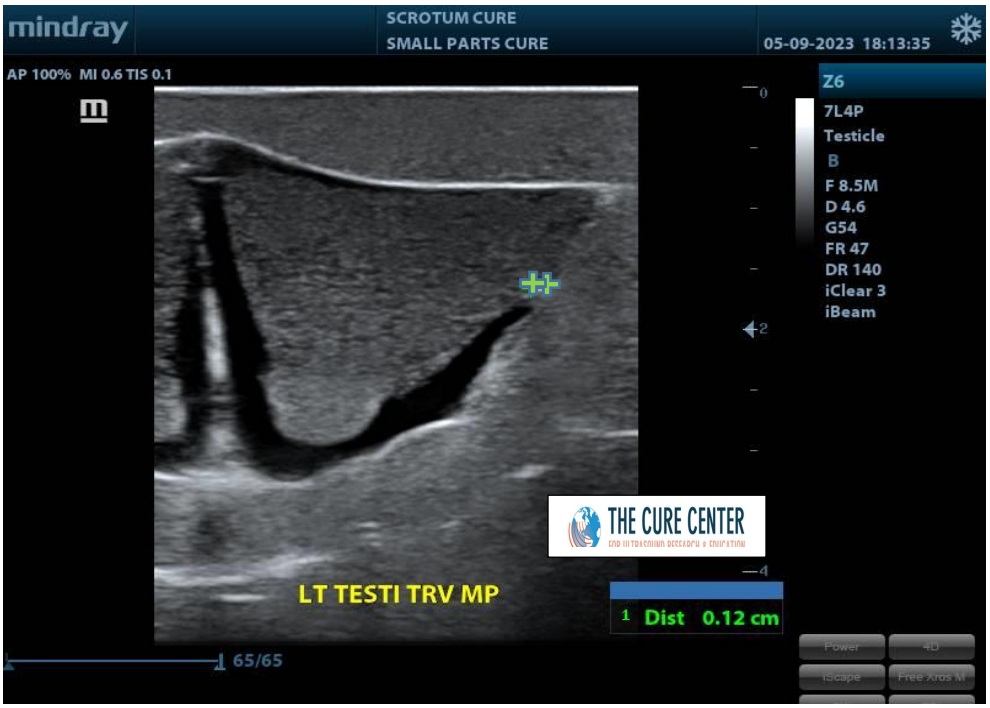

A.Show any abnormality you see in SAG, label it and measure it

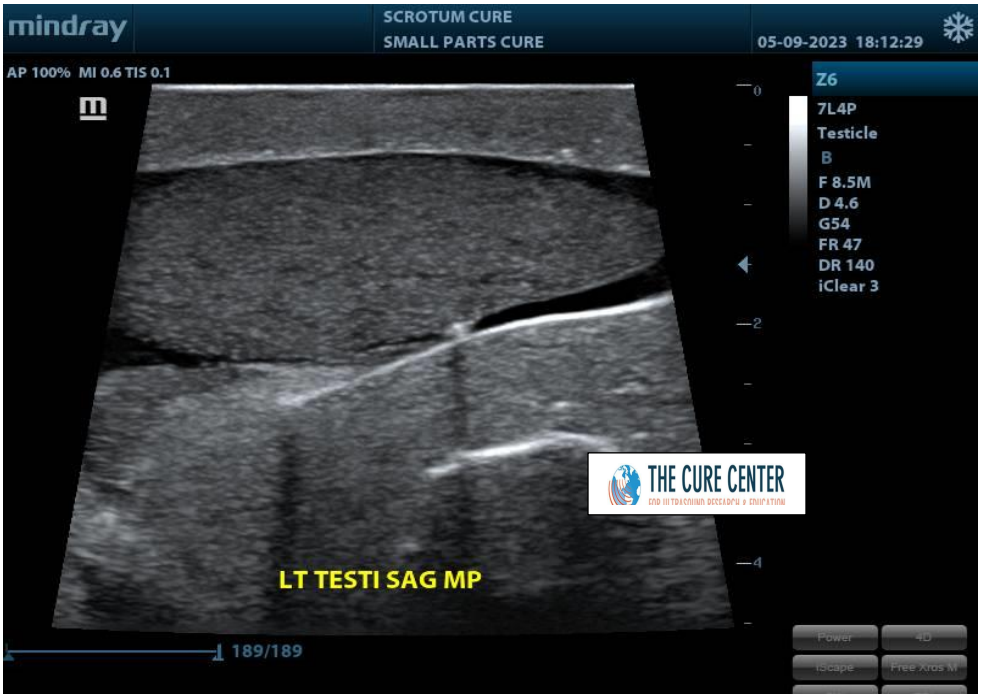

B. Show any abnormality you see in TRV and label it

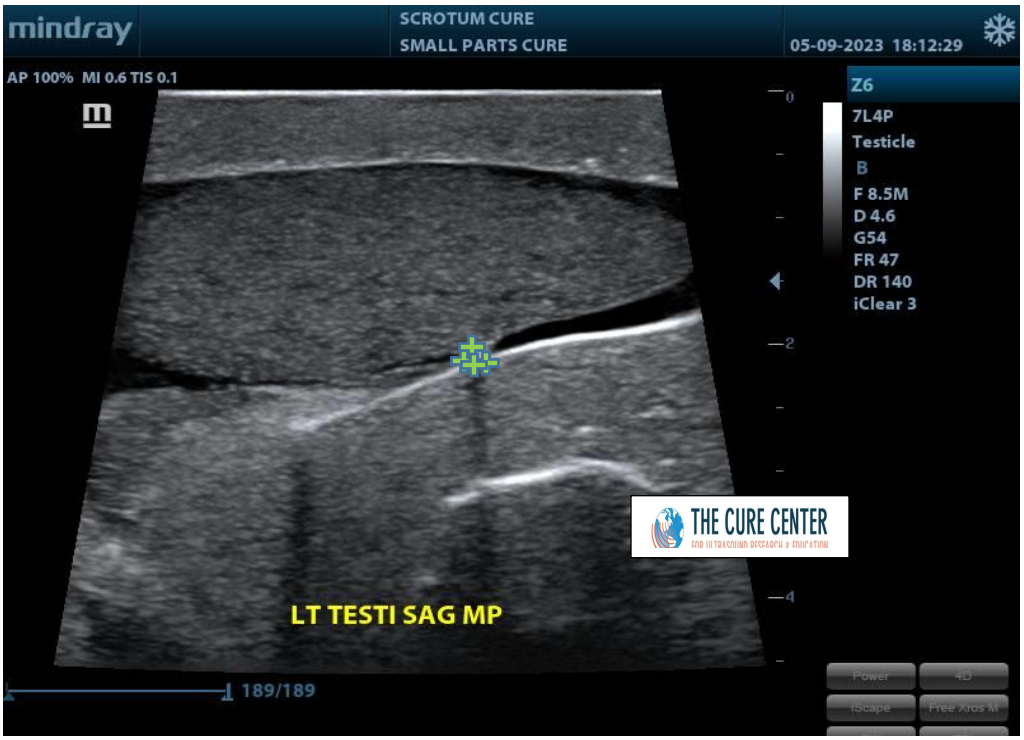

B.Show any abnormality you see in TRV, label it and measure it

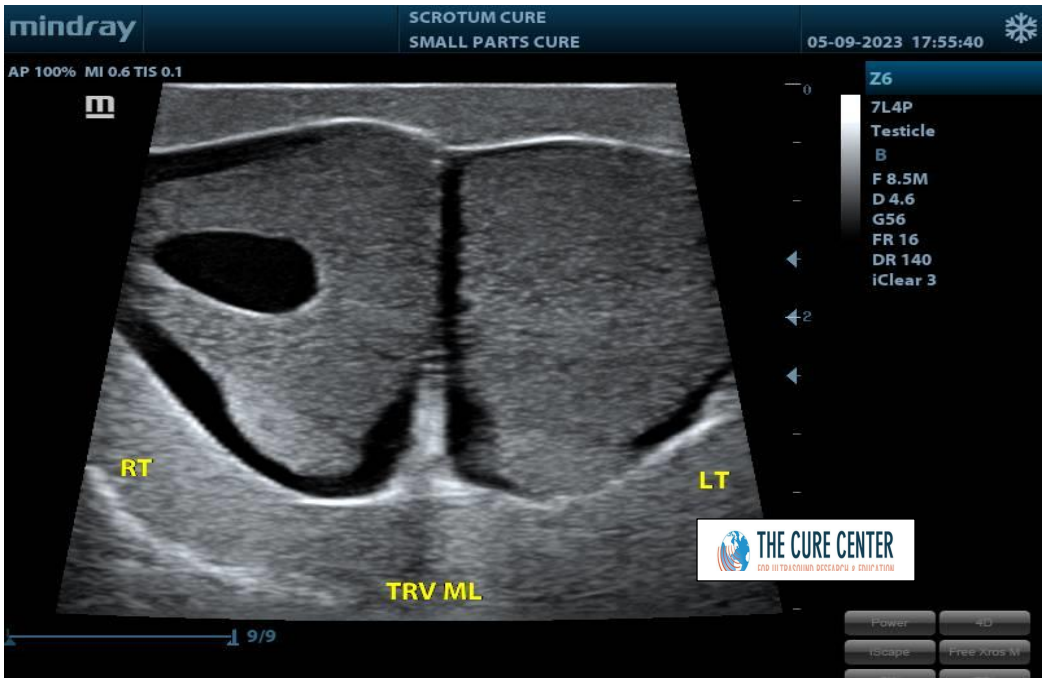

B.Show any abnormality you see in SAG and label it

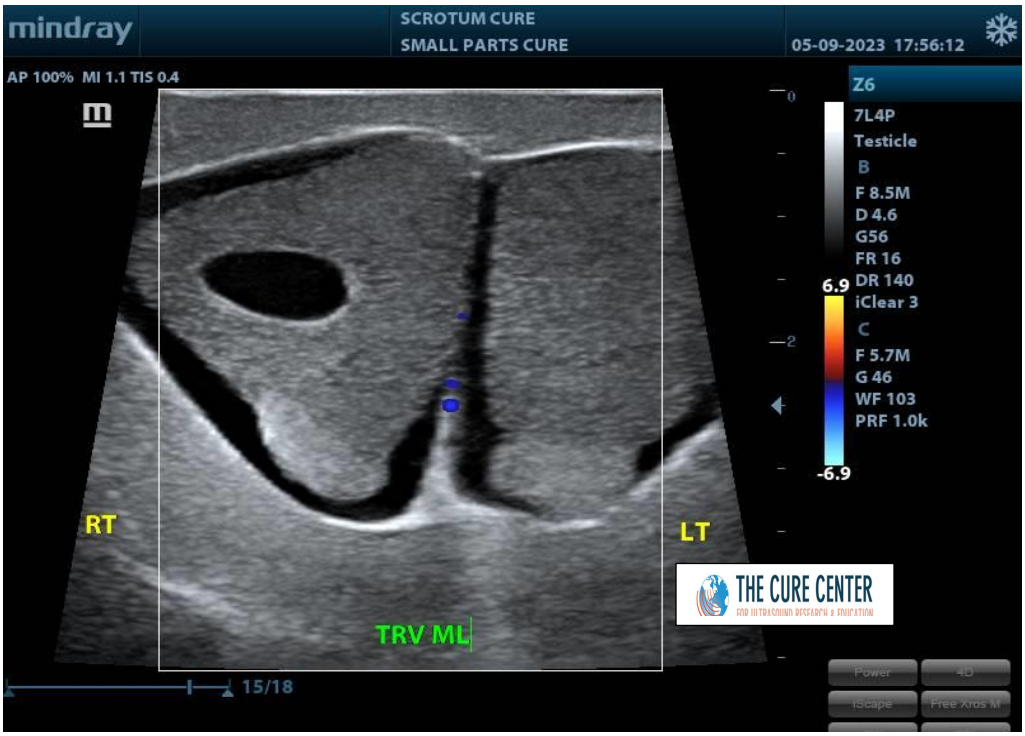

B.Show any abnormality you see in SAG, label it and measure it

26. Testicles TRV MIDDLE (Transition Image)

27. Testicles TRV MIDDLE (Transition Image with color)

28. Do the whole protocol again for the left testicle the same way we did for the right side from the begining.
